# THE PRESIDENT'S REVIEW

The impulse of philanthropy is as old as men's awareness of the need to join their efforts within the civilizing framework of a society. Organized philanthropy as now known in the United States is a recent phenomenon, however. The first foundations were established for limited and specific purposes. Only in this century have there emerged general purpose foundations—such as The Ford Foundation—dedicated to the improvement of man's lot on a broad scale.

This year The Ford Foundation, established in 1936, has rounded out two decades of philanthropic service and activity. For the last six of these twenty years, having evolved an expanded base of operation for an over-all program geared to some of the major social problems of our time, the Foundation has functioned as a truly national, public trust. The fiscal year now ended—October 1, 1955 to September 30, 1956—has been noteworthy in several important respects, not only in terms of immediate operations but as a significant milestone in the development of the Foundation itself.

During this period the Foundation more than doubled the dollar total of grants and appropriations made in all its preceding history. It increased ten times over the number of grantees which have received its support. The geographic sweep of Foundation activity was broadened measurably; as of October, 1950, Foundation grantees were concentrated in twenty-eight communities in sixteen states. (Only one grantee was located outside the United States.) By October, 1956, there were Foundation grantees in nearly 2,500 communities in all forty-eight states and three territories; in addition, Foundation activity had extended to fifty-four foreign countries.

The basic facts of our expenditures may be simply stated. The Foundation's grants and appropriations, for the entire twenty-year period, are now approaching the \$1 billion level. Actions taken on new grants, projects and appropriations in fiscal 1956 amounted to approximately \$602 million. This total includes \$489 million in new grants and projects and \$113 million in new appropriations which had not been converted into grants by the end of the year. Five-sixths of the total comprises special appropriations of \$500 million voted by the trustees in December, 1955—\$210 million, supplementing an earlier \$50 million, to help raise college faculty salaries; \$90 million to strengthen instruction in the nation's private medical schools, and \$200 million to assist voluntary, nonprofit hospitals in the improvement of medical service to their communities.

In this year also the Foundation concluded the first step of an internal fiscal program for the diversification of its own assets. This was accomplished by sale to the general public of approximately twenty-two per cent of the Foundation's holdings in Ford Motor Company stock.

Although the special appropriations, as well as the investment diversification, received final approval by the trustees in the course of the period reported here, last year's Annual Report noted these developments at length in recognition of the considerable time and effort expended on them by trustees, officers and staff in 1955.

Because of the widespread notice given to these actions, and the importance which the Foundation attaches to them, other aspects of the Foundation's total effort may have been overlooked.

This, then, is the appropriate place to note that The Ford Foundation's year goes far beyond this bare outline of events and expenditures.

The Ford Foundation is now engaged in some twenty important project and program areas. In sum, the Foundation's programs during this year took on new dimensions, moved into new areas, reflected anew the vast range of possibilities and choices which confront the entire institution of American philanthropy—and, we hope, reaffirmed basic principles that link the past and its performance to the future and its promise.

How has The Ford Foundation arrived at this point? What lessons are to be derived from the operations of the last few years which have seen the development of policies that are an inescapable outgrowth of The Ford Foundation's fiscal size and opportunity?

One thing must be said immediately. The fabric of philanthropy is not of a piece. In legalistic and fiscal terms, all foundations may appear to share certain attributes. But, like other elements of our society, nonprofit foundations are different not only from profit-making organizations but different often from each other as well.

The Ford Foundation, it happens, is the largest single philanthropic foundation in the world. This is and has been a fact of our corporate existence and actions. Because the Foundation is large, it has unparalleled opportunities for service. Because the Foundation has sought to realize those opportunities, it has grown in experience. Inevitably the Foundation's fiscal size has had to be a part of many of the trustees' considerations.

For the first decade of its existence, following its incorporation by Henry and Edsel Ford, the Foundation supported projects in which the Ford family was particularly interested. By 1948, after the death of the co-founders, the trustees of the Foundation realized that increased income and additional resources from the two estates soon would enlarge the Foundation considerably. The trustees determined that the Foundation should become an instrument serving all society. As his first major move in this direction, Henry Ford II, then President and Chairman of the Board of the Foundation, asked that the Foundation's articles and by-laws be changed to expand the board so that control of the Foundation board should pass from the Ford family. This goal was achieved in 1950.

Henry Ford II was so convinced of the need for this approach that he declared then his intention eventually to relinquish both the presidency and the chairmanship of the Foundation. The first step was taken in 1950, the second in the course of this fiscal year.

This deliberate decision by the donor family to relinquish control of the Foundation involved other major decisions as well. One major commitment was that, consistent with sound investment practices, the Foundation should undertake to diversify its portfolio, which consisted primarily of Ford Motor Company stock.

The then-anticipated return on Foundation capital of \$15 to \$20 million a year was neither the sole nor most important guidepost to program possibilities, but no consideration could be given realistically to any course of action without taking this into account.

Basic questions raised shortly after the end of the Foundation's first decade have been largely and, we believe, successfully resolved at the end of its second. As a result, The Ford Foundation is now what the donor family

set out to make it—a fully independent, responsible public trust.

The 1948 Board of Trustees faced up to other critical questions as well. The first was how to formulate a program which could carry out the broader purposes envisaged for the Foundation by its founders and benefactors; the second, how to organize the expanded Foundation.

The trustees recognized that they had a special responsibility to survey the total American culture and to make choices that would at least establish a starting point; later the Foundation's programs could be changed and expanded as opportunities, income and resources, and conditions warranted.

In this the trustees accepted the challenge of the maturing concept of American foundation philanthropy in which emphasis had shifted over a period of some forty years from the *effects* of social problems to their *causes*. They agreed that the resources of the Foundation should be committed to the solution of *problems* constituting grave threats or obstacles to human progress—such as the growing demands on the educational structure and the need for improved understanding of and between men and nations.

Accordingly the trustees named a special Study Committee to search out opportunities for philanthropic activity and to recommend the special steps The Ford Foundation could take in the fulfillment of its charter to advance human welfare.

It was as chairman of the Study Committee that I first came into intimate touch with the problems and the potentials of The Ford Foundation. I have been associated with the Foundation since. If I have a special perspective in summing up my impressions in this, my final review as president of the Foundation, it is one shaped by experience.

The Study Committee was assembled “to take stock of our existing knowledge, institutions and techniques in order to locate the areas where the problems are most important and where additional efforts toward their solution are most needed.” To the Committee were appointed widely respected men from education, medicine, the natural sciences, the social sciences, the humanities, business, industry and government. Henry Ford II, as chairman, set the terms of the Study Committee's work: “You are to have complete authority and responsibility in this undertaking. . . . We want the best thought available in the United States as to how this foundation can most effectively and intelligently put its resources to work for human welfare.”

During the course of its work, the Study Committee reviewed and analyzed many suggestions. The philosophical questions raised by this study, and subsequently resolved by the trustees, were many.

In respect to program the decisions were hammered out in broad terms. The Study Committee proposed and the trustees decided that the Foundation should concentrate on five major areas at the outset: the strengthening

of international understanding, the strengthening of democratic institutions, the strengthening of our economic well-being, the support of education in a democratic society, and the support of research to expand our knowledge of man's behavior.

The five areas were a reduction of many problems—all of which were examined for their comparative importance, as well as in the light of support already being offered for their solution by other foundations and other sources, public and private.

Intentionally the five areas were defined with such generality that the trustees would have latitude to broaden their scope. It was never intended that the Foundation operations should be confined or restricted to these five areas, and they have not been. Out of them have evolved most of our current activities. Still more will evolve in the future as new problems requiring action are selected by the trustees.

In the process of guiding the evolution and expansion of program, the trustees have constantly examined society's unmet needs, weighing one current need against another, weighing all against older needs and established commitments. This flexibility involves constant review and the freedom not only to embark upon new programs but, after careful deliberation, to discard old programs or commitments.

One of the lessons of the past is that many organizations supported by foundations outlive their usefulness or lose their effectiveness or exist in declining or non-productive form. Problems which organizations are set up to combat or solve sometimes disappear or change their dimensions or lose their relative significance. Reduction of the number and intensity of problems besetting society is, after all, the basic purpose of philanthropy. But the trustees have learned that it is easy for a foundation, which must recognize the independence of its grantees, to foreswear its own independence of action.

Largely as a result of this finding, the trustees now spell out clearly and definitely the amount and duration of each grant. The phrase "no future commitment" is one with which all Foundation grantees have become familiar. It is by this caveat that the Foundation reserves for itself an important degree of flexibility.

Admittedly, some flexibility is lost with each commitment, and full flexibility must be tempered with patience and wisdom. Once it embarks upon a program, the Foundation must stay with it long enough, and with enough money, to give fair assurance of success.

Nevertheless, flexibility goes to the very heart of The Ford Foundation's mode of operation. This flexibility must be of three parts, at least. There must be intellectual flexibility in order to receive, to recognize and to initiate ideas which are the lifeblood of the Foundation. There must be financial

1951

program categories :

I the establishment of peace

II the strengthening of democracy

III the strengthening of the economy

IV education in a democratic society

V individual behavior and human relations

# EVOLUTION OF FOUNDATION ACTIVITIES

by 1953

by 1956

flexibility, so that the trustees are able to utilize Foundation resources fully for those purposes which emerge as the most promising from the competition of ideas. There must be operating flexibility in the manner of making grants.

The problems to which The Ford Foundation addresses itself are the product of history. They are long in developing, long-range in prospect, and persistent. The resources which the Foundation can array against them are, however large in ordinary terms, minute when measured against need. Thus, in its programs, the Foundation invests in the leverage of learning, in the challenge of example.

It is natural, therefore, that education emerges as the major strand that ties together the purposes of almost our entire activity. One major division of the Foundation bears the educational label; the programs developed by it are the foremost beneficiaries of the Foundation's resources. But, in truth, education is an inherent part of every program, for education comes in many forms and through many avenues.

The vigor of education is dependent upon the vigor of our institutions of learning, of our scholars and scientists. The Foundation's concern for the enhancement of education is expressed in actions intended to strengthen the undergirding which these elements represent.

In the final analysis, only the education of man—the acquisition of new knowledge, dissemination of accumulated knowledge, and application of all knowledge—will remove man's own obstacles to social progress. Foundation philanthropy serves this end best when it serves as a radar detector, helping men and institutions to reach beyond man's sight and touch to detect the obstacles in his path.

It would have been simpler in many ways, perhaps, for The Ford Foundation to have confined its operations to the United States. But the headlong rush of world events and the annihilation of distance have made it clear that the obstacles to man's progress know no national boundary. More apparent today even than in 1950 is the realization that the welfare of the American people is bound up with the understanding and knowledge—and the tensions—that flow across all borders. The world grows smaller and American responsibilities and opportunities larger, dictating the need for greater understanding of the traditions and aspirations of other nations, of the differences that separate us from them, and of the greater things we do or should hold in common.

In all, the international programs account for about fifteen per cent of the Foundation's total expenditures. These programs take several forms. One approach is to strengthen American academic institutions, train specialists and educate the general public so that the United States might better meet its international responsibilities. Another is to increase the understanding by foreign peoples of American history, culture and contemporary

life. A series of grants in Western Europe is designed to aid the development of free and democratic institutions and to increase understanding among the peoples of Europe. Of major interest also is the effort to help economically underdeveloped countries, some of them newly independent, to facilitate their economic and social improvement through education, research and technical training.

The manner in which the Foundation's various programs have developed is a reflection of decisions reached in 1950 both as to the organization of the Foundation and its grant-making techniques.

Organizationally the Foundation has worked out its structure to meet its objectives. The trustees, who have the responsibility for establishing policy, are men of diversified interests. The Foundation is not in the main an operating organization, but relies instead on other institutions to carry forward the work for which the Foundation is able to provide funds. The officers of the Foundation operate as generalists, not specialists, functioning in a sense as group officers with interests broader than their own immediate assignments in a deliberate effort to maintain flexibility of outlook at the operating level. To add strength to this arrangement, the Foundation has organized a second echelon of specialized competence.

With the opportunities before it, the Foundation must be careful to ensure that its organizational structure continues to reflect program requirements and objectives. In this, as in all other respects, the Foundation must remain flexible. There is no wiser warning to those engaged in the work of philanthropy than that uttered by Dr. Raymond Fosdick: "Every social agency, including a foundation, has within it not only the seeds of possible decay but a tendency to exalt the machinery of organization above the purpose for which the organization was created."

The entire philanthropic process in which the Foundation is involved is one of qualitative and comparative judgments. It is at best a reasonable system of providing resources and opportunities for men capable of creative thinking in what has been described as a gigantic bet on the improbability of man. In the setting of the Foundation, the role and responsibilities of trustees, officers and staff are of vital significance.

The tone of an organization like The Ford Foundation is established by the trustees, who have the responsibility to make their decisions with all care, free of haste and pressure, to accord grantees the same independence which is necessary for the donor, to seek public understanding where this is possible, but to hold fast to basic convictions even if this understanding is not immediately forthcoming. With such support, officers and staff are then free to produce research and recommendations with an assurance of free inquiry that is as needful for a foundation as for the academic community which is nourished by philanthropy.

Optimum performance is contingent upon certain basic conditions. One is an "open door" attitude toward the many ideas, problems and suggestions that are pressed upon a foundation. The Foundation alone, of course, must take responsibility for selecting from among these proposals and determining courses of action. Another is a constant awareness that the negative decisions of philanthropy, like those in business, are more numerous, take fully as much time and research—sometimes more—and often represent benchmarks as important as affirmative decisions.

How does its generalized approach affect the Foundation's position as an initiator of ideas before the grant-making process occurs? The Foundation's interest in mental health is an appropriate example.

For some years the nation has been increasingly aware of the needs of mental health as a growing, pressing and national problem. The problem was neither invented nor discovered by the Foundation, but the Foundation was in a position to take positive action on a broad scale. Today, with a \$15 million appropriation, Foundation assistance is being given to a score of programs probing the social and medical causes, manifestations and effects of mental illness. Through this over-all approach, to which officers of general outlook and staff experts and advisers with specialized background bring various points of view, it is possible for the Foundation to direct its resources against what may be considered the root sources of social problems, instead of at small and sometimes superficial outcroppings.

The techniques by which the Foundation makes its grants, whether to activate internally generated programs or in response to proposals from outside, follow no set routine. Over the last six years The Ford Foundation has drawn upon many precedents.

From this experience emerges the central fact that there is no single best method of giving, although each gift requires the selection of a grantee and a determination of the amount to be granted.

Normally the grantee is an institution which requires funds to accomplish an important purpose and the grant is the amount required therefor. In this, the usual type of grant making, there are certain ground rules which must be observed. There must first be a basic need, exciting prospects, and a reasonable hope of success for the project involved. The prospective grantee must be possessed of capabilities that will enhance this potential, and the grant must provide a realistic budget for the grantee, both in terms of dollar level and duration, to assure that the task can be carried forward without unnecessary drag or interruption for further fund raising.

The extraordinary case is one in which a class of grants can be determined by existing standards and the amount of the gift to each grantee determined by a fixed pattern, carefully adapted to meet the objectives of the program. There are, in fact, relatively few truly productive opportu-

nities for foundation giving of this type. Yet, when the opportunity to make large grants in this manner occurred, the Foundation recognized several at one time and acted accordingly. These actions were, of course, the appropriations to help raise faculty salaries in 630 colleges of some 1,800 in the land, additional grants to some 126 colleges of this group, and special appropriations to strengthen education in the nation's forty-four private medical colleges and to improve the services of those voluntary, nonprofit hospitals which had met the standards for listing by the American Hospital Association. With the aid of expert advisers, sound criteria were devised to determine the amount which each grantee was to receive.

These actions constituted a dramatization of three major national needs. By its actions, which could not conceivably have had the same impact if restricted to a regional or local basis, the Foundation followed the precedent established by Andrew Carnegie and others, and in addition observed its own precepts of selectivity and of working through established organizations.

Any broad extension of this type of giving, without significant standards of selectivity, would compromise the role that private foundation philanthropy can best play. This is not to condemn welfare and ameliorative activity, either governmental or private. It is to emphasize, however, that for private foundation philanthropy, with its comparatively meager resources, gifts on a broad over-all base must necessarily be the exception rather than the rule, and that, when such exceptional opportunities occur, they must be weighed—as were these—against society's other major needs and resources therefor, and must transcend other courses open to the private foundation.

A self-imposed responsibility of the Foundation is that, once having determined what it hopes to accomplish in a given area, it must be ingenious enough either to find the existing organization to do the job or daring enough to devise new organizational methods and, if necessary, new organizations to do the work.

Wherever possible the Foundation makes its grants to existing institutions. Only when there has been no other practicable or promising course open to it has it established new organizations or engaged directly in operations.

Out of this position developed The Ford Foundation's decisions to establish, for the furtherance of the Foundation's stated purposes, such independent agencies as the Fund for Adult Education, the Fund for the Republic and Resources for the Future.

To these organizations, fully funded, governed by their own boards and officers, and independently staffed, have been entrusted the responsibilities of independent judgment.

In its varied pattern of giving, the Foundation has made small grants, with only limited discretion left to the grantees; very large grants, with wide latitude for the grantees; and various types between these two extremes.

The bulk of the Foundation's funds are given, however, in broadly defined, large-scale grants. As the Foundation's income has grown, this tendency has been increasingly emphasized. The size of a foundation makes it, potentially at least, an important influence in any field in which it makes grants. If it should attempt to prescribe the detailed purpose and operating procedures of all its grants in a particular field, a foundation could perhaps be accused of seeking to dominate that field. Thus broad grants and reliance upon the responsibility and discretion of grantees are desirable, indeed necessary, if The Ford Foundation is to continue enlisting others in the work which our resources can nourish.

The Foundation is committed to the belief that its contribution to society is directly related to the strength of the institutions which receive its funds. It draws no distinction between publicly and privately supported institutions when the purpose of the grant is research or training. But when the purpose of the grant is to provide general institutional support—as it was when the Foundation sought on a national scale to improve faculty salaries, medical education and hospital services—the Foundation has channeled its support to private institutions.

This in no way disparages an elemental fact recognized by every conscientious citizen, namely the nation's need to strengthen its tax-supported schools, colleges, universities, hospitals and other basic institutions.

The United States long has been the world's foremost example of diversity in depth—diversity in education, in public and political affairs, in religion. From this diversity has come much of the nation's strength. In this diversity privately supported institutions carry a large part of the responsibility for meeting human problems. Fundamental and unique as it is, however, the functioning of the private institution is subjected to economic strain which properly cannot be relieved by tax monies. Thus, private action, such as that which The Ford Foundation can initiate, is imperative if these institutions are to be helped in fulfilling their role.

Inevitably, successful utilization of a Foundation grant is determined in part by the conditions of the grant and the relationship between the Foundation and the grantee.

Foundations must have respect for the integrity of those institutions which have been granted foundation money. Integrity implies independence, and no action of the Foundation, before or after a grant is made, should be permitted to undermine this independence. The grant, in fact, should strengthen the institution which has the final responsibility for a project's success or failure.

To do business on a large scale, the Foundation must have strong clients with which to transact it. If a foundation steps over the invisible line and encroaches upon a grantee's independence, the opportunity for service is transformed into a visible and grievous disservice.

This is an indelible condition of every foundation-grantee relationship. It is neither more nor less true when willful critics, or others who merely fail to understand the relationship, impute to the Foundation responsibility for a grantee's actions or tactics.

Does the Foundation give up all rights the instant it makes a grant? In one sense, having entered into a contract, the answer is yes. As long as the other party meets the terms of contract, the Foundation has no right to intervene, interfere with or direct the grantee. In fact, no responsible, self-respecting institution would accept a grant on any other terms. However, the Foundation retains a continuing responsibility to review and evaluate the grantee's accomplishments under the grant. If the Foundation should conclude that it has fallen short of the objective, or that a grantee has exhibited poor judgment in a series of events over a sustained period of time, the Foundation has the inherent right—and indeed the obligation—to withhold further support for such a grantee.

Admittedly, such action would have to be based on more than a passing situation. It would be proper only if it came about in the same process of objective evaluation that governs the establishment of new programs or a shift in emphasis in established programs. Evaluations require judgments which finally are rendered by men making no pretense to omniscience. In any event there is no tribunal for judgments of this nature. Thus the responsibility for making judgments cannot be evaded by those whose responsibility it is to administer the resources of philanthropy.

In light of the impact such evaluations may have, the need for recognizing the grantee's independence is never greater than at such times as the Foundation may be the object of strident controversy. Occasionally the Foundation's position in such a situation has led to gross misunderstanding.

No responsible foundation official wishes controversy for controversy's sake. But if it comes, it must be recognized that through the centuries controversy has been the servant of education—and that education is our main concern. There can be no education without controversy. To deny philanthropy its established right to support education on the grounds that some of its by-products prove controversial would be to deny education private support of the kind it has enjoyed in this country for more than three hundred years.

The discretion of foundations may, on occasion, be an issue for some critics. To protect their over-all objectives, foundations should exhibit prudent awareness of public attitudes. But to shun an opportunity because

some will label it controversial would be to abdicate responsibility.

The role of philanthropy is not to stir discontent. Its role is to help stir ideas for the improvement of man. The betterment of mankind is ever a current aspiration. Foundation philanthropy's mission is to help translate that aspiration into future reality. If this objective is worthy in essence, then philanthropy's position as a private arm of the public welfare cannot and must not be subjected to the pressures of daily headlines.

To be buffeted in one direction or another by the winds of immediacy would be to negate the forward role which society long ago recognized as the proper function of the entire educational enterprise, and of which foundation philanthropy is a part.

The Ford Foundation is still in the process of evolution. I am confident that it will never remain static. I am equally confident that as it turns into its third decade and to the years that lie beyond, the Foundation will hold fast to the principles which already have evolved from its relatively brief experience: flexibility, selectivity, responsibility.

In seeking its goal the Foundation, I am certain, will continue to forego easy and conventional spending for the sake of clamorous approval or political safety. The Foundation's future can be useful and productive only if it continues its effort to anticipate long-range needs for appropriate and effective use of philanthropic funds, if it continues wisely to apply its various techniques for distributing funds courageously.

I have every reason to believe that under its new president, Henry T. Heald, The Ford Foundation will continue to seek energetically and creatively the fulfillment of its mandate to advance human welfare, wherever this pursuit leads.

That it may move into realms as yet uncharted seems probable, indeed highly desirable. After all, the problems to which this Foundation devotes its resources have baffled mankind's best minds for centuries. We know that even the immediate settlement of one problem breeds others.

The Foundation's mission seems clear and should be easily understood. It is simply to devote its full thought and its entire energy to the search for those fragments of truth out of which ultimately can come good in the endless exploration of life.

H. ROWAN GAITHER, JR.

**THE FUND FOR ADULT EDUCATION**

## DEVELOPMENT OF LIBRARY RESOURCES

In the preservation of man's culture and in his quest for knowledge, no resource is more important than the library. And libraries today, in company with other elements of our educational enterprise, are confronted with many problems. Financial support is only one of these. Other problems would face the library—and the scholar who uses it—even if money for buildings and for books were limitlessly available.

The card catalogue of a very large institutional library, for example, might grow so great that it would require its own mammoth building in which to be housed. But even if there were no limits on its physical expansion, there might well be limits on its usefulness as a device for indexing and locating data. What are those limits and how can they be circumvented? Is it possible to develop other mechanical devices without such limits?

For more than two years, the Foundation has been inquiring into such questions and seeking the views of librarians, scholars, scientists and others on their possible solution. Two conclusions seemed clear: traditional methods will be inadequate to meet the future requirements of library development; new discoveries in the physical sciences and developments in technology, for which government and industry are beginning to find use, have not yet been applied to the requirements of scholarship and the dissemination of knowledge.

All observers agreed that the most effective approach to the problem of libraries lay in the establishment of an independent organization, with distinguished leadership, which would address itself exclusively to the problem over a suitably long period of time. The Foundation's trustees, accordingly, requested a panel of leading citizens to form and to provide the directors and governing membership of a Council on Library Resources, Inc.

The Council was established this year as an independent, nonprofit organization incorporated in the District of Columbia. The Foundation granted \$5 million for use by the Council over a five-year period.

Chairman of the Council's board of directors is Gilbert W. Chapman, President and Director of Yale and Towne Manufacturing Company, of New York City. The other members of the board are: Douglas M. Black, *President and Director, Doubleday and Company, Inc., New York*; Lyman H. Butterfield, *Editor-in-Chief of the Adams Papers, Massachusetts Historical Society*; Frederick Hard, *President, Scripps College, Claremont, California*; Barnaby C. Keeney, *President, Brown University*; Joseph C. Morris, *Vice President, Tulane University*; John M. Schiff, *Partner, Kuhn, Loeb and Company, New York*; Frederick H. Wagman, *Librarian, University of Michigan*; Warren Weaver, *Vice President, Rockefeller Foundation, New*

*Crowded bookstacks typify need for better utilization of research materials, which is the objective of new Council on Library Resources*

York; Herman B Wells, *President, Indiana University*; and Louis B. Wright, *Director, Folger Shakespeare Library, Washington, D. C.*

President of the Council is Verner Clapp, who resigned his position as Chief Assistant Librarian of Congress to undertake his new responsibilities.

The Council has freedom to range widely through research and development in all fields, including the library field itself, to determine new attacks upon the traditional problems involved in the storage and dissemination of knowledge. It will not seek to relieve the problems of particular libraries through providing funds for normal purposes. Instead, it will seek to enhance and to accelerate the development of libraries generally, and research libraries especially, through encouraging new methods and helping to coordinate their application.

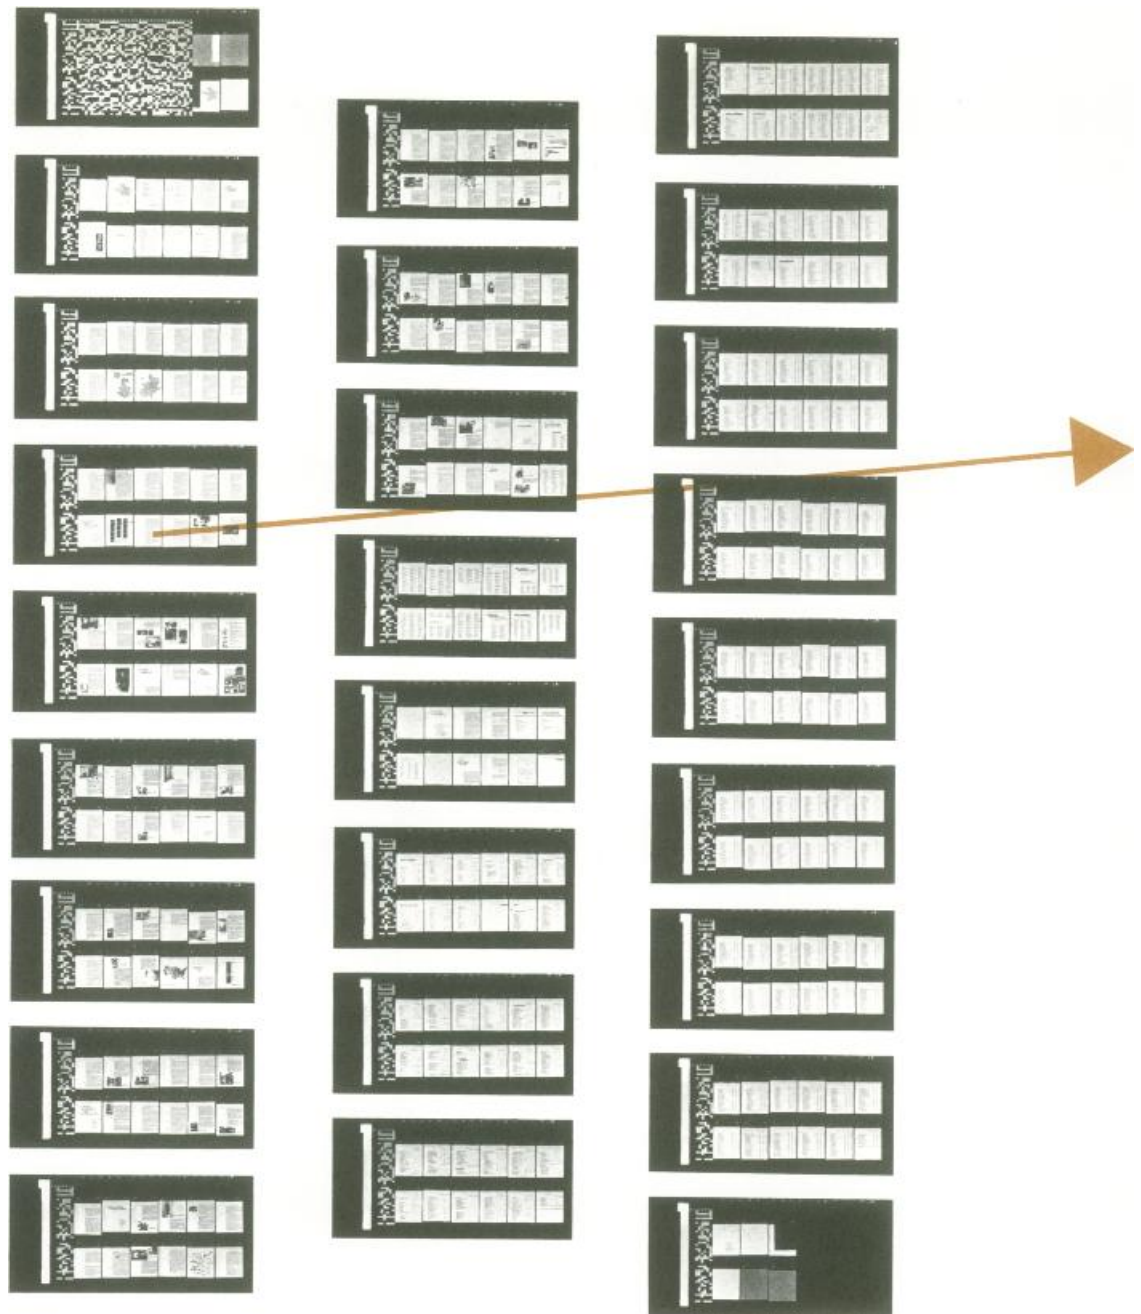

High on the list of the Council's program priorities will be basic research which, it is hoped, will lead to the development and application of new techniques and methods.

Other major areas of Council activity are to promote the extension of inter-library cooperation, to provide leadership in the search for a balance between the needs for research and needs for teaching, and to encourage closer liaison and cooperation with foreign libraries and archives. In respect to inter-library cooperation, one of the great challenges is the vast amount of duplication of little-used research material and the vast job of identifying it, consolidating it into a common pool, and making it systematically available to many additional users. Such an undertaking clearly is beyond the capacity of individual libraries. The Council recognizes that wide cooperative ventures of such a nature may benefit from additional central coordination.

In respect to foreign archives, the increasing demand by American scholars for materials, or microcopies, from European sources is placing a continued strain on services and personnel abroad. The Council, aware that it is in the national interest for American scholars and institutions to improve their relations with research libraries abroad, hopes to find ways pointing toward further centralization of the demands made. It hopes also to help in developing uniform international standards of cataloguing and micro-reproduction and in providing foreign institutions with an equitable *quid pro quo* for their services.

In its operations, the Council expects to carry out most of its research and demonstration functions through grants to other institutions and qualified individuals.

During the current fiscal year, The Ford Foundation has taken other steps to improve library services, as part of its broad program of assistance to American education.

*The Annual Report you are reading is reproduced in its entirety in the space above by the new micro-reproduction system known as Minicard, now under development by Eastman Kodak Company but not yet available commercially. The system is typical of several which the Council on Library Resources hopes will help solve the problems of storage, dissemination and utilization of research materials. Each Minicard above, shown actual size, permits reproduction of twelve full-sized pages. Coded area at left of each Minicard is index to direct special machines in sorting, filing and locating material. Arrow links reproduction of page 29 to original, full-scale page, opposite.*

The Pacific Northwest Library Association received its first payment of \$33,400 under a grant announced last year, for a study intended to coordinate and improve library services and facilities in the states of Washington, Oregon, Montana and Idaho and the Canadian province of British Columbia. Sometimes described as closest to what remains of the frontier, the Pacific Northwest has grown so rapidly that it has been difficult for library resources to keep pace. The Pacific Northwest Library Association, oldest regional library association on the North American continent, has worked for more than thirty years to correct conditions which admittedly are unequal and often unsatisfactory. The study now under way encompasses the entire library structure of the area and seeks to create a greater public awareness of the need for free public library service, to suggest definite ways through which demonstrated needs can be met, and to develop means of translating public awareness of needs into financial support. The project has its headquarters at the University of Washington and is under the direction of Dr. Morton Kroll, on leave from the department of political sciences at Wayne University, Detroit.

#### **THE ECONOMIC STATUS OF TEACHERS**

*General Faculty Support* The Foundation's concern for the vitality of American education has been expressed in many activities, but none has ranked higher in importance than the programs established to help raise the long-depressed salaries of college faculty members.

Recognizing the central role of the college teacher in the intellectual enrichment of our democratic society, the Foundation set for itself the task of stimulating a general effort to reduce the very substantial gap between teachers' remuneration and the cost of living. To this end the trustees appropriated \$260 million: \$50 million in fiscal 1955 and an additional \$210 million in the current fiscal year.

By July 1, 1956, half of the combined appropriations was distributed in grants to 630 institutions of higher learning. Final payments will be made to these institutions during the fiscal year 1957.

They include all regionally accredited, privately supported, four-year colleges and universities which grant degrees in the liberal arts and sciences and bachelors' degrees in a number of allied professional fields.

Under the formula of distribution developed by the Foundation, in consultation with a special advisory committee appointed by the trustees, all of the 630 institutions received endowment grants from the \$210 million appropriation. In addition, 126 of these institutions received accomplishment grants from the \$50 million appropriation.

The basis for allocation of the endowment grants, in each instance, was

the undergraduate instructional costs for the 1954-55 academic year. When fully paid, each endowment grant will represent a sum approximately equal to this figure. Institutions whose faculties include non-salaried teachers—mostly members of religious orders—received grants that include an amount roughly equivalent to the value of the contributed services.

Each institution has agreed to add the sum of its grant to its endowment fund for a period of at least ten years. Invested in this manner, the grants are expected to produce an annual income of about four per cent, which must be applied in full to increase faculty salaries. After the ten-year period, the principal sum may be used for either salary support or any other academic purpose.

Under the accomplishment grants program, the Foundation has sought to give additional recognition of substance to those colleges selected from among the institutions emphasizing liberal arts and sciences which have, since World War II, shown special leadership within their own regions in improving the status and compensation of their teachers.

These accomplishment grants when fully paid will approximate one-half of the 1954-55 faculty payrolls. In view of the fact that many of these institutions in giving priority to the status of teachers have sometimes bypassed other vital needs, the Foundation has made it possible for these grants to be used for other pressing academic requirements, as well as to raise faculty salaries.

The scope of the problem still confronting American education was emphasized by H. Rowan Gaither, Jr., chairman of the trustees of the Foundation, at the time the first grants under these programs were distributed: "I must emphasize that these grants are only an approach to, and not a solution of, the problem. It is hoped that the grants will be interpreted as a challenge by the thousands of alumni, friends and institutions whose support is vital to private education and our society."

*Teachers Insurance  
and Annuity Association*

The shortage of teachers at all levels of education is by now an unhappily familiar problem in the United States. Because today's college and university enrollments are expected to double in about a decade, the problem is especially acute for the institutions of higher learning.

There are now some 250,000 faculty members in the colleges and universities of the land, teaching a combined enrollment of three million students. Unless new teaching techniques are developed, there presumably will be a need at least to double the strength of the college and university faculties to serve the predicted increase in enrollments. But merely adding 250,000 teachers to the present supply will not meet the need, for the profession suffers from a high rate of attrition of its available trained talent.

A major approach toward overcoming this critical loss is to make teach-

ing a more attractive profession. The \$260 million commitment to help raise faculty salaries was an important part of the Foundation's effort to remove lagging compensation as an obstacle to entrance into teaching.

An additional move to make teaching more attractive, announced in the current fiscal year, was a \$5 million appropriation by the Foundation to the Teachers Insurance and Annuity Association. Funds from this appropriation will be used to expand non-salary benefits to teachers, specifically by defraying for T.I.A.A. the costs of developing two new types of insurance programs and establishing initial reserve funds. These programs will make available, to teachers and other qualified policyholders, insurance against extraordinary medical expenses and long-term disability.

T.I.A.A. has long served the interest of the teaching and related professions. It is a nonprofit, non-agency insurance organization which, evolving from a free pension system established originally under Carnegie auspices, has operated since 1918 on a contributory and fully funded basis. Its usefulness to the profession is indicated by its growth. In 1925, T.I.A.A. served less than one hundred cooperating institutions. In 1955, there were 702 cooperating institutions, both public and private.

In approaching the question of additional insurance protection for policy holders, T.I.A.A. for more than two years studied the needs of college faculties. Two specific kinds of coverage were high on the list of non-salary benefits considered important in enhancing the status and security of the teaching profession.

Inasmuch as some ninety per cent of the colleges and universities offer basic medical coverage to staff members, T.I.A.A.'s major medical insurance will provide supplemental protection against more serious and costly accidents and illness.

The disability income insurance will provide an income of up to \$500 a month during total disability up to age sixty-five, at which time retirement would start. The disability income can be coordinated with old age benefits as well as with disability benefits provided by Federal social security.

As developed by T.I.A.A. the two plans may be written jointly or separately and will be made available to qualified institutions whether or not they are now in the Association's retirement and life insurance plans.

Of the Foundation's original appropriation, a maximum of \$500,000 is available to cover organizational and developmental expenses. A similar amount was set aside as an initial contingency reserve, and the remainder of the \$5 million will be paid as needed for contingency reserves over a ten-year period. Should the total appropriation to T.I.A.A. prove after a ten-year period to have been in excess of need, the balance will be diverted to the improvement of other non-salary benefits consistent with the original purposes of the Foundation's gift.

## IMPROVEMENT OF MEDICAL EDUCATION

From a general interest in education, which has marked its operations since its inception, the Foundation has moved into a number of specific areas of concern and activity.

Inevitably, perhaps, the Foundation during this year has faced the question of what effective role it could essay in that field of education which most concerns the physical well-being of the nation but which has proved over a period of many years to be the most expensive—medical education.

For the university administrator, the medical school is not only his costliest problem—on the average it costs about four times as much to train a medical student as a liberal arts student—but quite often his toughest and touchiest. There are many reasons for this. The medical school's faculty is large and its student body small. The courses are long and the facilities and equipment expensive. There is a constant problem in keeping teachers from the lucrative attractions of private practice.

To help prevent the impairment of the nation's progress in medical science and to help meet the ever-expanding requirements of the schools upon which the people of the United States depend so heavily for their health services, the Foundation this year undertook two specific actions.

*Private Medical Schools* To help strengthen instruction in the nation's forty-four privately supported medical schools, the Foundation appropriated \$90 million to be used as endowment grants.

A special advisory committee was appointed to recommend a plan for distribution of the funds. Its members were Lee DuBridge, *President, California Institute of Technology, chairman*; Carlyle Jacobsen, *Executive Dean for Medical Education, State University of New York, executive vice chairman*; Dr. George Packer Berry, *Dean, Harvard University Medical School*; Detlev W. Bronk, *President, The Rockefeller Institute*; Leonard Carmichael, *Secretary, Smithsonian Institution*; Dr. Ward Darley, *President, University of Colorado*; Dr. John Holmes Dingle, *Professor, School of Medicine, Western Reserve University, Cleveland*; Leon Falk, Jr., *Chairman of the Board, Maurice and Laura Falk Foundation, Pittsburgh*; A. Crawford Greene, *Attorney, San Francisco*; Robert March Hanes, *President, Wachovia Bank and Trust Co., Winston-Salem, North Carolina*; Mrs. Albert D. Lasker, *President, Albert and Mary Lasker Foundation, New York*; Dr. Robert Frederick Loeb, *Professor of Medicine, Columbia University*; William Farnsworth Loomis, *Director, The Loomis Laboratory, Greenwich, Connecticut*; Dr. Franklin David Murphy, *Chancellor, University of Kansas*; Robert Winship Woodruff, *Chairman, Finance Committee, The Coca-Cola Co., Atlanta, Georgia*.

*Complex courses like anatomy are one of the reasons instruction of medical students is most expensive element of higher education in U.S.*

As an initial disbursement under this appropriation, the Foundation distributed grants totaling \$22 million to the forty-four privately supported medical schools in full operation, at the rate of \$500,000 to each of the forty-three four-year schools and \$250,000 to the two-year medical school at Dartmouth College, Hanover, New Hampshire.

For a period of ten years the grants are to be held as invested endowment, with only the income to be expended for instructional purposes. Construction and research needs are specifically excluded from purposes of the grants. After a decade, the medical schools will be free to use the principal sum, as well as endowment income, for any academic purpose.

*National Fund  
for Medical Education*

In 1949 the National Fund for Medical Education was established to campaign for funds, principally among corporations, to support medical education. Since then its funds have been given for current operating expenses and are distributed to each of the eighty-one accredited medical schools of the United States, public and private.

To assist the National Fund in its efforts to strengthen the financial support of medical schools and to help develop new sources of such support, the Foundation appropriated \$10 million for a program of grants entirely apart from the \$90 million endowment program.

Under the appropriation, grants will be paid on a matching scale over a period of five to ten years, the program's duration depending upon the rate at which the National Fund develops additional support. The sliding formula of the Foundation's grants is intended to give particular encouragement in the early years of the plan to increasing the contributions of existing donors and to attracting new donors.

In 1955 the National Fund received \$1,725,026 in direct contributions for distribution to the nation's medical schools. If in 1956 the Fund's receipts are of equal size, the Fund will receive, under the Foundation's formula, grants totaling seventy per cent of this amount, with all contributions in excess of the 1955 total matched dollar for dollar, up to an annual maximum of \$2 million. In each subsequent year, the Fund's receipts up to the total of the preceding year will be matched on a diminishing scale, and all receipts over the previous year's total matched dollar for dollar up to the maximum. The grants are to be distributed at the close of each calendar year.

### **PUBLICATION IN THE HUMANITIES AND SOCIAL SCIENCES**

In the academic world, a unique and necessary role is occupied by the non-profit publishing organizations known as university presses. Their function, among others, is to serve the purposes of scholarship through the publication of manuscripts which are not necessarily intended for a general audience and which, consequently, might not be considered highly marketable by commercial publishing houses. That books published by university presses occasionally become well known to the general book-buying public is a welcome, but economically uncertain, experience in the life of many university presses.

In any event, the economics of the general publishing field are a complicating factor and particularly so because of the nonprofit nature of the university press. Traditionally, scholars are asked to help subsidize in whole or in part the publication of their own manuscripts. Publishing costs, however, have approximately doubled since the start of World War II, while academic salaries, in terms of purchasing power, have lagged appreciably. Far less than ever before can individual scholars afford to pay out of their personal funds the subsidies needed for publication.

The problem is most acute in the humanities and the social sciences, since these disciplines have for many years received the least financial support from sources outside academic institutions.

To stimulate and support publication of scholarly books in these fields, the Foundation has appropriated \$1,725,000 for a five-year program to be administered by approximately thirty college or university presses which are expected to become eligible for grants.

Named to assist the Foundation in the determination of eligible presses is an advisory committee comprised of Chester Kerr, *Secretary, Yale University Press*; Taylor Cole, *Professor of Political Science, Duke University*; and Kerker Quinn, *Editor of "Accent, a quarterly of new literature."*

To achieve the broadest possible effect, it is stipulated that at least fifty

per cent of each grant is to be used for books written by scholars outside those institutions where eligible presses are located. Several restrictions also are incorporated into the program. No grant money may be used as general operating support or as replacement of other subsidies already received by the publishing organizations, nor is it to be used to subsidize the publication of textbooks.

It is hoped that over a five-year period the program will make possible the publication of 250 scholarly volumes and eliminate the need for direct subsidy by the authors of a like number of books. Editors and scholars consulted by the Foundation staff are convinced that books meeting the existing standards of the various presses will be readily available. The editorial boards of the presses will retain full discretion and judgment in selection of the manuscripts for publication.

### **GROWTH OF EDUCATIONAL TELEVISION**

Educational television has been an established part of the educational framework of the United States for less than five years. Much was promised for it when, in April, 1952, the Federal Communications Commission set aside 242 channels (later increased to 258) for noncommercial use by institutions of learning. These channels were allocated to as many different communities, at least one to every state, and, in some states, in numbers large enough to permit establishment of educational television networks. The decision of the F.C.C. followed long hearings and vigorous representations made to the agency by educators and other public-spirited citizens.

Since then educational television in various forms has been under test; for some observers it is an outstanding success, for others a flat failure. The president of a leading university has said, "Television may well be the greatest single aid to both resident instruction and adult education devised in this country." On the other side of the discussion, the governor of one state has refused to allocate public funds beyond an initial trial period, declaring, "A twenty-inch screen should never be allowed to come between teachers and pupils during school hours."

In 1956, with twenty-six educational television stations on the air, the issue was unresolved. It may remain so for many years.

Educational television interested The Ford Foundation even before the F.C.C. decision; it has been a major program of the Fund for Adult Education since 1951. Up to the current year more than \$11 million of Foundation grants to the Fund had been allocated to educational television.

This year the Foundation appropriated an additional \$8 million to bolster the status of educational television at all levels of interest and

operation. The funds support individual programing, a national center for educational programs, professional and technical improvement in the field, and information to citizen organizations eager to protect the educational television structure.

*Released Time  
of Faculty Members*

The arts and science faculties—with conspicuous exceptions—have been slow to embrace television as an educational tool. To help educational television stations secure the participation of distinguished college and university teachers, the Foundation has approved \$1.5 million. Grants from this sum are being used to defray the costs of relieving faculty members from regular duties in order to work on educational telecasts. To qualify for a grant, a college or university must already have demonstrated its willingness to release faculty members for this purpose.

*Late law expert Zechariah Chafee, Jr., was Lowell Television Lecturer at Harvard University, conducted regular TV course on human rights*

The first institutions to qualify were Alabama Polytechnic Institute, Alabama University, Chatham College, Harvard University, the University of Chicago, the University of Detroit, the University of Illinois, the University of Nebraska, North Carolina State College, Washington University at St. Louis, and Wayne University. A \$37,500 grant to each was matched by the institution with a sum of \$22,500, thus making available a total of \$60,000 for a period of three years.

A wide variety of programs is projected by the institutions. Some will be produced for college students, others as public service to the community at large. Course content will include such subjects as social and intellectual traditions of America, current economic problems, Renaissance and modern art, urban structure, psychology, and human rights and the Consti-

tution. Further recognition of the status of educational television is Harvard's decision to appoint each year, under its grant, two distinguished professors to the newly designated position of "Lowell Television Lecturer."

A condition of the grants is that each series of programs must be produced in a manner which will permit its widest possible use by other educational stations as well. This end will be achieved through the operations of another grantee of the Foundation, the Educational Television and Radio Center.

*Educational Television  
and Radio Center*

The Educational Television and Radio Center at Ann Arbor, Michigan, chartered in 1952, serves as a program production agency and clearing-house for television materials suitable to the educational concept. Its function is threefold: to contract for the production of new programs by educational television stations, closed circuit and university studios and commercial producing facilities; to acquire completed films from other sources; and to exchange kinescoped programs among educational television stations.

Since May, 1954, the Center has supplied five hours a week of new programs to television stations operating under educational licenses. It expects to expand this output to ten hours. In addition, it will contract for, and make available to other stations on an exchange basis, programs produced under the faculty released-time grants.

Until this year the Center has been a grantee of the Fund for Adult Education. By agreement between the Fund and Foundation, it has been concluded that the potential applications of educational television are broader than the "liberal adult education" orientation of the Fund. Accordingly, the Foundation has approved a grant of \$6,263,340 to the Educational Television and Radio Center to support its work through 1959.

The funds will make possible a considerable increase in the organization's central staff in order to bring about an increase, in quality as well as quantity, of the Center's program service. The grant also will permit the Center to continue developing radio programs of a related nature.

In addition, the Foundation in December, 1955, granted \$90,500 to the Center to carry out public information activities in educational television which were previously performed in Washington by the staff of the National Citizens Committee for Educational Television.

*Robert Frost, distinguished American poet, reads from his own works, discusses other poets and philosophy of life on "Heritage" series, produced by WQED and distributed by the Educational Television and Radio Center*

*Closed-circuit educational TV gives entire class of dental students clear view of new operating methods*

*National Association  
of Educational Broadcasters*

To achieve its full status, educational television must utilize not only the services of outstanding educators in the many disciplines and arrange for greater dissemination of their efforts, but must also promote, strengthen and advance professional standards of personnel within the educational television movement itself, building thereby a much needed reservoir of leadership and executive talent.

The National Association of Educational Broadcasters has for more than thirty years served as the professional arm of educational broadcasting. Its membership consists of educational television and radio outlets, production centers and other institutions and individuals interested in the educational use of television and radio.

With a grant of \$94,000 from the Foundation, the Association will continue to provide engineering and management consultant services to the field and will conduct seminars for the upgrading of personnel.

*Joint Council  
on Educational Television*

Many educators agreed in 1952 that the case for educational television channels required a coordinated expression of their views before the Federal Communications Commission. To provide an instrument for this professional voice, and to resist encroachment upon the channels reserved by the F.C.C. for educational purposes, the Joint Committee on Educational Television was formed.

In an effort to bring about closer coordination of work under way in the field, as well as to define and limit the functions of various participating groups, the Joint Committee has now taken new form as the Joint Council on Educational Television. For its operations, which include legal and technical services directed toward the protection and activation of those channels reserved for educational purposes but not yet on the air, the Foundation has granted \$140,000 to the Council.

The Council's constituent organizations include the American Association of School Administrators, American Council on Education, Association for Education by Radio-Television, Association of Land Grant Colleges and Universities, Educational Television and Radio Center, National Association of Educational Broadcasters, National Association of State Universities, National Council of Chief State School Officers, National Congress of Parents and Teachers, and National Education Association. In 1956, Mr. Edward L. Ryerson, President of the Chicago Educational Television Association, accepted membership on the Council to represent the interests previously expressed by the National Citizens Committee for Educational Television.

The American Council on Education also has its own special Committee on Television to keep liaison with those educators not formally engaged in the educational television movement. This year the Foundation has granted \$12,000 to the American Council for the purposes of its special committee.

#### **THE FUND FOR ADULT EDUCATION**

Some fifty million Americans currently are enrolled in adult education programs with the intention, increasingly in recent years, of acquiring a broad liberal arts background rather than vocational or technical specialties.

The Fund for Adult Education, an independent, nonprofit organization established by the Foundation, has been engaged since 1951 in aiding the development of liberal adult education programs with the objective of assisting citizens to gain knowledge for its own sake and to participate more effectively in public affairs. It works primarily through educational institutions, but also through business associations, farm and labor groups, and voluntary organizations.

This year the Foundation, which previously had given the Fund \$29.9 million, granted it an additional \$17.5 million. The grant will be used over a five-year period to strengthen formal and informal adult education through university evening and extension courses, liberal arts colleges, and seminars and workshops. It also will be applied to raising the standards and professional status of the field through training of adult educators enlisted from colleges, libraries, public schools and other organizations. Experiments with and evaluation of programs and materials will be underwritten, and some national educational organizations will be aided.

The Fund will be able to concentrate more heavily on these aspects of adult education now that the Foundation has enlarged its own interest in direct assistance to educational television.

*Blinded by his own hand, the tragic king (Christopher Plummer) begins exile at climax of TV-Radio Workshop performance of Sophocles' "Oedipus Rex"*

# TV-RADIO WORKSHOP

During this fiscal year, the Foundation's TV-Radio Workshop completed its fourth season as producer of OMNIBUS, an experimental television series designed to demonstrate that educational and cultural programs can compete successfully in network broadcasting.

OMNIBUS is a ninety-minute, commercially sponsored program which is scheduled for a twenty-six-week season. In the past year, it achieved a peak audience of 21 million viewers and was awarded nine citations, including several which described it as the best educational series on television. The complete text of its three-part program on the United States Constitution, which was favorably received by the critics, was published in the fall of 1956 by the Houghton Mifflin Company. A textbook edition also was scheduled for publication. Texts of several other programs were reproduced in magazines, including *The Atlantic Monthly*.

On a percentage basis, OMNIBUS divided its time during the 1955-56 season among the following categories: history and biography, 27.6; music and dance, 18.7; contemporary affairs, 12.7; contemporary literature and drama, 10.9; classic literature and drama, 10.9; sports and light entertainment, 10.1; and science and natural history, 9.1.

Since its inception, OMNIBUS has been presented over the Columbia Broadcasting System on Sunday afternoon. For the 1956-57 season, it was transferred to the American Broadcasting Company network, which scheduled it on Sunday evening. The program was to be broadcast "live" by sixty-five stations and through kinescope by fifteen.

*Against backdrop of Constitution, noted attorney Joseph Welch narrates three-part dramatization of its development and effect on United States history. First production (top, l) depicted Benjamin Franklin as advocate in formation of one nation from thirteen states. Second program recreated Lincoln-Douglas debates, and third (r), Constitution's protection of individual civil liberties*

*Conference of deans and president of Harvard University is telecast from Faculty Room in ninety-minute documentary on role played by higher education in contemporary American life*

*Pretending to be Galileo atop Tower of Pisa, Gilbert E. Merrill, assistant director of education at Boston's Museum of Science, prepares to show school children on Omnibus program that two objects of different weight fall at same speed due to gravity*

For OMNIBUS' 1956-57 season, the following were among the features planned:

a filmed report on medical training at Johns Hopkins University, continuing a survey of American education launched during the 1955-56 season with a "live" broadcast from Harvard University; an investigation of the structure of the three branches of the American Government by Attorney Joseph N. Welch, who narrated the Constitution series; an original tragedy based on the Battle of Gettysburg; dramas by Sophocles, Moliere, Shaw and O'Neil; dramatic analyses by Walter Kerr, drama critic for the New York *Herald Tribune*; expositions of music and choreography by Leonard Bernstein and Agnes de Mille.

Kinescopes from OMNIBUS were distributed by the Workshop to schools and colleges in response to some ten thousand requests. The Workshop also began distribution of a series of films compiled from its past programs to individual television stations in this country and abroad. William Saroyan is master of ceremonies for the series, entitled *Under the Sun*. In addition, the Workshop loaned twenty-three OMNIBUS films to the Educational Television and Radio Center for use by educational television stations.

# THE BEHAVIORAL SCIENCES

**MENTAL HEALTH PROGRAM**

**BEHAVIORAL SCIENCES: GENERAL DEVELOPMENT**

Most of the Foundation's programs deal with human problems, and the Foundation believes that knowledge of human behavior is essential to their solution. Furthermore, it believes that the scientific study of human behavior contributes to the storehouse of such knowledge, both directly and indirectly. Accordingly, the Foundation's entire program, from time to time, has supported study of the behavioral aspects of social problems.

In addition, the Foundation has attempted to foster the general advancement of the behavioral sciences. The range of its interests extends from research, both basic and applied, to the dissemination and practical application of scientific knowledge. A necessary condition of making progress toward these objectives is the development of personnel and institutions.

This year, work in the behavioral sciences was carried forward on two fronts: research and research training in mental health, and further development of basic Foundation interests and activities in the field.

#### **MENTAL HEALTH PROGRAM**

##### *Research in Mental Health*

In 1955, the Foundation appropriated \$15 million for work in mental health. In the fiscal year, more than two-thirds of this amount was granted for the support of research and research training.

The institutions and programs which received support for research were selected from a total of 231 applications from physical, biological, and social science departments in universities; medical schools; research hospitals and clinics; and other such institutions in this country and abroad. The Foundation's grants to twenty-one research centers in the United States, for studies to be conducted over a period of five years, totaled \$6,826,850.

The programs range across a number of areas of mental health: personality dynamics and development; biological, physiological, and somatic aspects of the problem; social and community aspects; children's disorders; studies in therapy; and animal studies. The grants involve a wide range of institutions: six medical schools, two research divisions of hospitals, three psychiatric hospitals and research centers, three independent research institutes, six behavioral science departments and research centers in universities, and a physical science department in a technological university. Furthermore, the senior investigators in these programs represent a variety of disciplines. For example, in medicine, support was provided for representatives of anatomy and physiology, pharmacology, neurochemistry and neuropathology, pediatrics, and psychiatry and psychoanalysis. Outside of medicine, there are representatives of chemistry, neurophysiology, genetics and zoology, psychobiology, psychology, sociology and anthropology.

Recipients of the grants, the chief investigators, the nature of the programs, and the amounts received follow.

*Personality Dynamics  
and Development*

Austen Riggs Center, Stockbridge, Mass. \$333,900.

Erik Erikson, David Rapaport, Dr. Robert White.

Elaboration and refinement of theoretical work, with clinical investigations; study of milieu therapy provided by social arrangements for patients at Austen Riggs.

University of California (Berkeley), Institute of Child Welfare. \$420,000.

Harold E. Jones, Jean W. MacFarlane.

Follow-up study on adults in which personality measurements will be applied to selected persons for whom similar psychological and physiological data on earlier periods in their lives, from infancy to adolescence, are available.

University of Michigan, Department of Psychology. \$313,000.

John Atkinson, Gerald Blum, Daniel Miller, Edward Walker.

Investigations in the tradition of experimental psychology of hypotheses deriving for the most part from dynamic or clinical psychology, dealing with human motivations, defense mechanisms, and similar matters.

University of Minnesota, Medical School. \$238,400.

Paul Meehl, Dr. Donald Hastings.

Effort by a small team of psychologists and psychiatrists to develop better classifications of personality disturbances, quantitatively and clinically.

New York University, Research Center for Mental Health. \$250,000.

Robert Holt, George Klein.

A study similar to that at Michigan, but dealing particularly with the interrelationship between emotional and cognitive processes.

Stanford University, Department of Psychology. \$300,000.

Robert R. Sears, Ernest R. Hilgard.

A study similar to that at Michigan, with emphasis on developmental and psychodynamic studies.

Research Foundation of State University of New York (Syracuse) College of Medicine. Dr. Julius B. Richmond. \$274,050.

Clinical studies of infantile development—physiological, psychological and social.

*How a child develops the concept of quantity—the basis for determining “how much?”—is studied at Austen Riggs where girl, 5, watches examiner change volume of liquid in different-sized glasses, ponders, finally guesses amounts by single dimension: height. Study follows the work of Swiss psychologist Jean Piaget*

- Biological, Physiological and Somatic Aspects* California Institute of Technology, Division of Chemistry and Chemical Engineering. Linus Pauling. \$450,000.  
Basic chemical investigation of some forms of mental retardation as a possible instance of molecular disease.
- Massachusetts General Hospital, McLean Hospital Research Laboratory. Dr. Jordi Folchi-Pi, Dr. Alfred Pope. \$250,000.  
Neurochemical investigation of the metabolism of different parts of the brain and their correlation with mental functioning.
- Research Foundation for Mental Hygiene, New York State Psychiatric Institute. Dr. Heinrich Waelsch. \$225,000.  
Study of the metabolism of nervous tissue and the relationship of metabolic processes to certain hormones, nutrient materials and drugs that have effects upon the brain or upon the mental state.
- University of California (Los Angeles), School of Medicine. \$500,000.  
H. W. Magoun.  
Generally, studies of the relationship between neurophysiology and behavior; specifically, studies of the brain stem, the physical location of interaction between basic biochemical and electro-physiological mechanisms with the endocrine system and with certain psychological processes.
- The Worcester Foundation for Experimental Biology. \$400,000.  
Hudson Hoagland.  
Biochemical studies of the action of certain psychosomimetic drugs and of their relationship to clinical psychotic states.
- Social and Community Aspects* Cornell University, Medical College. \$500,000.  
Dr. Alexander Leighton.  
Two independent field studies, of an epidemiological character, on the incidence of mental disturbance in different social groups and its social and psychological causes.
- Children's Disorders* University of Chicago, Orthogenic School. \$342,500.  
Bruno Bettelheim.  
Clinical investigation of psychotherapy and milieu therapy on severely disturbed children in a residential center, with specific reference to the causes and treatment of childhood schizophrenia.
- Studies in Therapy* Chestnut Lodge Research Institute. \$250,000.  
Dr. Donald L. Burnham and others.  
Clinical investigation of the psychotherapeutic process in the treatment of adult schizophrenia.

*Chimpanzee balances cube in test of sensory-motor development at Yerkes Laboratories. Chimpanzees are uniquely suited to study of cerebral function, comparative intelligence*

University of Chicago, Counseling Center. \$350,000.

Carl Rogers.

Study of the process and the outcome of psychotherapies of different kinds, using the quantitative methods of academic psychology.

The Johns Hopkins University, School of Medicine. \$230,000.

Dr. Jerome Frank.

Exploration of therapeutic effectiveness among psychiatric patients, with special attention to the use of the placebo as preliminary to psychotherapy.

The Menninger Foundation. \$350,000.

Dr. Lewis Robbins, Dr. Robert Wallerstein.

Study of different kinds of treatment given a variety of patients at the Menninger hospital and clinic, with particular attention to the evaluation of outcome.

Mount Sinai Hospital and Clinic (Los Angeles), Psychiatric Research Institute. Dr. Franz Alexander. \$250,000.

Methodological experimentation, as well as substantive inquiry into the process of psychoanalytic therapy, under highly controlled conditions and with full recording and multiple diagnosis of the cases.

*Animal Studies* Roscoe B. Jackson Memorial Laboratory, Division of Behavior Studies.

J. P. Scott, John L. Fuller.

\$300,000.

Combined genetic-biological and social-psychological study of "personality" development in animals.

Yerkes Laboratories of Primate Biology. \$300,000.

Henry W. Nissen.

Study of the influence of early experience upon subsequent behavior, with special attention to emotional development, carried on under experimental conditions, with primate animals (chimpanzees) as subjects.

At the close of the year, the Foundation still had under consideration a small number of proposals from European institutions on which final action was expected in the 1957 fiscal year.

*Research Training  
in Mental Health*

While new knowledge of mental health and illness was given primary consideration by the Foundation, it also was recognized that some of the immediate needs for trained personnel in the field should be met through the development of career opportunities in psychiatric research and related research specialties. It was decided to do so by concentrating on training programs for relatively advanced persons, in order to add to the research potential quickly.

Accordingly, a grant of \$3,682,000 was made to the Foundations' Fund for Research in Psychiatry, an independent organization established by the Social Research Foundation, for a program to develop research personnel in mental health over a five-year period. This program will include fellowships covering the medical, biological, and social sciences; training grants for senior investigators; appointments to research positions in psychiatry departments; and a few appointments of senior research professors in psychiatry. A brochure describing the activities under this grant and applications to participate in the training program may be obtained from the Foundations' Fund, 256 Edwards Street, New Haven, Connecticut.

*Related Research Grants*

The Mental Health Research Fund of London was given \$210,000 to support research and research training in the United Kingdom. The Mental Health Research Fund was formed in 1949 by a small group of scientists, doctors and laymen to promote conferences and research work.

A grant of \$6,000 to the New York Academy of Sciences supported a Conference on the Pharmacology of Psychosomimetic and Psychotherapeutic Drugs, and a grant of \$5,000 to Columbia University covered travel expenses of American participants in the Second International Neurochemical Symposium held at Aarhus, Denmark.

The acquisition, transcription and cataloguing of the works of Sigmund Freud was aided by a matching grant of \$22,500 for five years to the Sigmund Freud Archives. This material will be deposited in the Library of Congress for the benefit of researchers and scholars and eventually will become the property of the library.

## BEHAVIORAL SCIENCES: GENERAL DEVELOPMENT

In addition to the mental health program, the regular activities of the Foundation in promoting the increase and application of behavioral knowledge and the general development of the behavioral sciences were continued during the year.

### *Center for International Studies*

Teaching and research in the behavioral sciences at the Massachusetts Institute of Technology and work in international communication at its Center for International Studies were supported by a grant of \$560,000. Of this sum, \$430,000 was given to establish two long-term faculty appointments in the School of Humanities and Social Studies.

The desire and the need for such appointments grew out of an earlier Foundation grant to support M.I.T.'s program in international communication. In a short period of years, scholars at M.I.T. have formed a major center for the conduct of economic, political and communication research on international problems. The remaining \$130,000 of the Foundation's grant will permit long-term continuation of communication research and its integration into the M.I.T. teaching program.

Major work now nearing completion includes studies of the attitudes of American business leaders toward foreign economic policy, of French attitudes toward European unification, and of the ideas held by Indian intellectuals on their country's international and domestic problems.

### *Grants-in-Aid to Individual Scholars*

Four years ago, the Foundation initiated a program of grants-in-aid to individual scholars in the behavioral sciences, to be used for research purposes selected by the recipients. The grants were reportedly of particular value because they provided the freedom and flexibility needed in research work, and the Program of University Surveys, sponsored by the Foundation to appraise university needs in the behavioral sciences, recommended continuation of this and similar types of assistance. Accordingly, in 1955, the Foundation undertook a similar program, and, during this fiscal year, grants-in-aid were awarded to sixty-three behavioral scientists. A list of their names is on page 141.

Forty American universities most active in the behavioral sciences on the graduate level, as indicated by the number of doctoral degrees awarded recently in this field, were invited to submit nominations for the awards, based upon the candidates' present and potential productivity in creative research. In addition, nominations of scholars from other institutions and from abroad were included in the final list for consideration.

Under the terms of the program, a grant of \$4,250 for each recipient was made to his university. The expenditure of this sum is solely at the

discretion of the recipient, over an unspecified period of years.

The Foundation was assisted in awarding the grants-in-aid by an Advisory Committee consisting of persons not directly associated with the universities submitting nominations. This committee was composed of: Charles Dollard, *Educational Consultant*; Fillmore Sanford, *Executive Secretary, American Psychological Association*; Hans Speier, *Chief, Social Science Division, The Rand Corporation*; Ralph Tyler, *Executive Director, Center for Advanced Study in the Behavioral Sciences*; and Donald Young, *Director, The Russell Sage Foundation*.

*Support of Basic Research  
and Training Programs*

Support of broad research programs, rather than specific research projects, is often desirable as a means of advancing behavioral knowledge. The Foundation made three grants of this kind in 1956 for the work of leading investigators in anthropology, psychology, and sociology.

A grant of \$225,000 was made to the University of Illinois for the work of Dr. Julian H. Steward, Research Professor of Anthropology. This work consists of a three-year study of patterns of social and economic change in native societies under the impact of Western industrial civilization. The study will be conducted by research teams under Professor Steward's supervision in Mexico, Peru, East Africa, West Africa, and Asia or Oceania.

Professor Steward already has reached tentative findings that widely scattered and apparently quite different societies undergo predictable changes in family systems, social relations and property concepts as their economic base shifts. The new study will attempt to ascertain whether social and economic changes follow a common line of development in all societies despite initial differences in cultural and historical backgrounds.

*Change of social patterns under western impact is discernible at traditional funeral rite in Japanese village cemetery, where woman mourner appears in modern dress*

Such studies may make it possible to predict the consequences of economic development, and thus help to guide governmental and private agencies offering technical, economic and scientific aid to non-industrialized areas of the world.

McGill University of Montreal received a grant of \$60,000 for studies by D. O. Hebb on basic mechanisms of human behavior. Professor Hebb, who has trained scholars from the United States and Canada, has sought in recent research to combine human with animal studies, and studies of the normal individual with clinical cases. Professor Hebb hopes to advance knowledge of the underlying connections between human psychology and human physiology, and the Foundation grant will make possible the continuation of his research for a period of three years.

Paul Lazarsfeld and others at Columbia University have been engaged since 1950 in a program for improving advanced training in social research. The program aims to develop better materials for training advanced students in social research. Volumes now in preparation will deal with various problems of formulation and measurement in social research. To complete this work and the publication of training materials, the Foundation granted \$101,600. The grant provides up to ten fellowships over a three-year period to enable younger scholars to participate in the project under Professor Lazarsfeld's direction.

*Applied Research:  
Juvenile Delinquency*

The problem of juvenile delinquency, and the human waste and tragedy it represents, is universally acknowledged. However, by the time a child has become a juvenile delinquent, his behavior pattern usually is so fixed that treatment is unduly handicapped. It is important, therefore, to identify the potential delinquent and to develop methods of treatment as soon as possible.

*Unsupervised play or a sign of potential delinquency?  
The Glueck Social Factor Scale seeks answers from  
familiar situations such as this big-city street scene*

*No one greets this boy on his return. Warmth or indifference of home atmosphere and consistency of discipline and supervision are weighed in Glueck scale predicting future behavior of child*

One of the best-known devices for predicting the chances of a child's becoming delinquent is the Social Factor Scale developed by Drs. Sheldon and Eleanor Glueck of the Harvard Law School. This research has received Foundation support since 1952. To test the Glueck predictability scale regarding early identification and treatment of juvenile delinquency, the Youth Board Research Institute of New York has been conducting an experimental seven-year study under the direction of Maude Craig. Its completion will be supported by a Foundation Grant of \$105,300.

*Center for Advanced Study  
in the Behavioral Sciences*

The program of the Center for Advanced Study in the Behavioral Sciences, at Stanford, California, was continued with a supplementary grant of \$1,850,000. The Center, which began operations in 1954, is an independent organization established by the Foundation. It selects annually, from a list of nominations submitted by universities across the country, a limited number of scholars for one-year fellowships at the Center. Through exchange of insights and skills, the fellows gain additional competence in their specialties. During 1956-57, the Center's third year, some fifty scholars were in attendance. The grant will enable the Center to complete the five years of operation originally contemplated but not covered by the initial grant from the Foundation.

*Other Grants* In addition to the actions and programs described above, nine grants were made for research and study in various fields within the behavioral sciences:

American Statistical Association: Preparation of an analytical index to Volumes 35-50 of the *Journal of the American Statistical Association*, for two years, \$19,640.

Columbia University: Study of the economic aspects of institutional growth, by Karl Polanyi and Conrad Arensberg, for two years, \$36,000.

Cornell University: Study of personal factors in college student attrition, by John Summerskill of the Department of Clinical and Preventive Medicine, for one year, \$10,000.

Harvard University: Studies on imagination and personality by Henry A. Murray, for approximately three years, \$24,600. Experimental and mathematical research on models for learning, by Frederick Mosteller and Robert Bush, for six months, \$2,500.

Social Science Research Council: Program to improve mathematical training of behavioral scientists, for three years, \$102,600.

University of Chicago: Analysis of relations between political theory and empirical research, under the direction of Leo Strauss, for one year, \$20,100.

University of Kansas: Completion of work on the theory of interpersonal relations by Fritz Heider, for one year, \$3,000.

University of Michigan: Study of Japanese personality and culture, by George De Vos, for approximately one year, \$10,700.

# PUBLIC AFFAIRS

**IMPROVING GOVERNMENTAL PROCESSES**

**LEGAL EDUCATION AND PUBLIC LEADERSHIP**

**CITIZENSHIP PARTICIPATION IN PUBLIC AFFAIRS**

**METROPOLITAN AREA STUDIES**

As a leading exponent of political democracy, the United States bears a special responsibility today to prove its strength and vitality in meeting the challenges and changes which confront it in public affairs. And the measure of its response will be the extent of its citizens' participation in the processes of democratic government at all levels—and the quality of the understanding they bring to it.

While the encouragement of participation is primarily the province of political parties, there are ways in which a nonpartisan foundation can contribute to this essential function of democracy. It can assist efforts to improve governmental processes, to develop public leaders, and to spur public interest and understanding of public affairs.

The Ford Foundation has engaged in all of these activities in the past year through grants to academic institutions and other nonprofit educational organizations. In addition it made several grants for research and education on the complex problems of metropolitan areas.

#### **IMPROVING GOVERNMENTAL PROCESSES**

##### *Professorships in Public Affairs*

A high level of analysis and reporting on politics and government is an essential ingredient to good government from local to national levels. A great deal of research in this field still is carried out in university libraries. Firsthand investigation among public leaders and on-the-spot study of political institutions are techniques generally too expensive to find adequate support in the normal academic budget.

This past year the Foundation gave \$200,000 each to six universities to enable senior scholars in politics and government to take time out from teaching duties for direct research. Recipients were the University of California (Berkeley), the University of Chicago, and Columbia, Harvard, Princeton and Yale Universities. The grants will support research professorships for an eight-year period. Appointments to these chairs will not be limited to the teaching staffs of the universities, but may include visiting scholars or eminent figures outside the teaching profession who can contribute to a realistic understanding of democratic government. Tenure in the chair will be limited to a year or, at most, two years. The grants also will afford research training to younger scholars serving as staff assistants to the professors.

##### *Research Fellowships*

As an incentive to younger political scientists to venture out of the libraries, the Foundation made a grant of \$340,000 to the Social Science Research Council for a three-year program of fellowships for research in American government. The fellowships, which also will be open to persons trained

in other social sciences, will carry stipends ranging from \$5,000 to \$25,000. They will enable recipients to study political processes at various levels of government through such techniques as interviews and direct observation of governmental bodies in action.

*Political Reporting Awards*

Although a high level of state and local political reporting is vital to good democratic government and to public understanding of complex political issues, outstanding reporting in this field seldom gets much recognition. A consequence is that, instead of remaining in communities where their services are needed, many promising young men and women forsake local political reporting for the reporting of national and international affairs.

The American Political Science Association this year launched an awards program for outstanding coverage of local politics or government by young reporters on daily newspapers in twelve Midwestern states. This is one of a series of steps being taken by the Association to emphasize the importance of political reporters to their local communities and to develop closer working relationships between journalists and political scientists, as a means of increasing public understanding of the functioning of government at all levels. The Foundation gave \$37,500 to be used over a three-year period for this experiment.

The awards for the first year's winners included plaques for each reporter and his newspaper, and attendance at a two-week seminar on public affairs reporting at the University of Illinois.

*Political Opinion*

For an analysis of political behavior in Pittsfield, Massachusetts, during the 1956 Presidential campaign, the Foundation granted \$9,885 to Williams College. The study will continue an inquiry, initiated during the elections of 1952 and 1954, into the development of political opinion

*Voter's comments are noted during 1956 campaign by senior Richard L. Schwab as part of Williams study of voting behavior and attitudes in Pittsfield*

among individual citizens. In addition to contributing a clearer understanding of democratic processes, the program already has afforded some one hundred undergraduates an opportunity for practical application of their classroom knowledge and techniques.

*Public Administration* Efforts of the American Society for Public Administration to give professional stature to the appointive public service were aided by a \$245,000 grant. The Society, founded in 1939, is the only national group of "generalist" administrators in the United States; both government officials and university educators meet within its framework. By working for improved practices in public administration, the organization hopes to increase the prestige of public service, thereby attracting to it an increasing number of qualified recruits.

*Institute for Defense Analyses* Problems of national defense are understandably among the foremost concerns of the United States Government and the American people. Not only does defense spending dominate the national budget, but defense policies have a decisive effect on the economy and on scientific development.

A \$500,000 grant went to the Institute for Defense Analyses this past year to strengthen national security by helping to increase the use of the resources of science and technology in the development of defense policy. The Institute, an association of five schools organized at the request of the Secretary of Defense, grew out of the conviction in Government circles that the complex technology of modern warfare demands that the judgment of military leaders be fortified by the best scientific knowledge available. Specifically, the Institute was designed to give the benefit of the nation's best scientific minds to the Defense Department's Weapons Systems Evaluation Group, which provides the armed forces with analyses, under projected conditions of war, of the effects of various weapons systems upon organization, strategy and tactics. The Institute will serve as an additional and important link between Government and the academic world in the development of research in the natural sciences and the social sciences insofar as they pertain to defense.

Members of the Institute for Defense Analyses are the California Institute of Technology, Case Institute of Technology, Massachusetts Institute of Technology, Stanford University and Tulane University. James Killian, President of M.I.T., is chairman of the board; Major General James McCormack, Jr., USAF (Retired), is president, and Dr. Albert G. Hill is vice-president and director of research.

*Criminal Justice* A pilot survey of the administration of criminal justice in the United States will be completed with the aid of a grant of \$245,000 to the American Bar

Foundation. The pilot study was launched with a grant from The Ford Foundation in 1954, following a preliminary inquiry made by a special committee of the American Bar Association. The following states have been studied: Kansas, Michigan and Wisconsin.

Appointment of the special committee reflected a growing concern in the legal profession with the destructive influence of organized crime. With criminals exploiting weaknesses in the often-conflicting Federal, state, county and city jurisdictions, members of the legal profession questioned whether the American judicial system, inherited from a slower-paced era, had adapted itself adequately to cope with modern conditions. The special committee called for “. . . a bold and exhaustive inquiry into the way we are performing our professional function of protecting life, liberty and property in the complications of modern society and under our free institutions.”

*Legal Aid* In the last few years the National Legal Aid Association has been extending free or inexpensive legal services throughout the country as an essential part of a judicial system dedicated to the protection of the rights of the individual. The Foundation first aided this expansion program in 1953; it contributed \$300,000 in 1956 to permit continued expansion for a three-year period.

The enlarged program includes:

Continuing cooperation with the American Bar Association to establish legal aid offices for persons involved in civil cases in cities of 100,000 population and over. Although the number of these offices has doubled in the last ten years, there still are thirty-eight cities of this size which have no such legal aid service.

Encouragement to state and local bar associations in organizing legal aid services in smaller cities. The Association estimates that there are 125 smaller cities which need such facilities, of which seventy-two currently have no services at all and twenty-eight only volunteer committees.

Strengthening of existing legal aid offices in cities where the growth of population or shifts to the suburbs have created a need for additional facilities. This would include for the first time provision of legal defender service for persons involved in criminal cases who are unable to pay legal fees.

#### **LEGAL EDUCATION AND PUBLIC LEADERSHIP**

Lawyers, although they are only a small part of the total United States population (one for every 746 men, women and children), are one of the nation's more influential occupational groups. They comprise more than half the membership of Congress and are equally prominent in the state

legislatures. Many other members of the legal profession hold policy-making posts in government, where they have an influential voice in establishing standards of performance, or serve as heads of large corporations which set the pace of the nation's economic life. Their influence on the quality and efficacy of American democracy is significant.

*Advanced Legal Studies* To strengthen legal education as a training ground for public leaders, the Foundation has assisted advanced legal training for law teachers, or teacher candidates, at several law schools which confer a large proportion of the advanced law degrees and supply many of the teachers in law schools throughout the United States.

A main deterrent to advanced legal studies has been the inadequacy of fellowship support. Despite advances in tuition at law schools, as well as in income for lawyers in metropolitan law firms, the level of fellowships has remained substantially the same for the last twenty-five years. The result is that many able law graduates interested in teaching careers have given up academic ambitions for financial reasons.

This year the Foundation gave \$500,000 and \$250,000 respectively to the law schools of Harvard and Columbia Universities for graduate fellowships in an effort to help remove financial impediments to advanced training. The grant will enable the two schools to increase both the number and the amounts of these fellowships as a means of attracting and holding potentially able legal scholars to the teaching of law.

Going beyond the curriculum of most law schools, which chiefly are concerned with preparing students for immediate practice, the advanced training at Harvard and Columbia will attempt to place law in its full social context, taking into account the basic philosophy underlying the American legal system, social influences upon it and the interaction of foreign and international law. American and Canadian law teachers are eligible for the fellowships, which will complement the Foundation-supported programs of international legal studies for both foreign and American specialists described on pages 97-100 of this report.

### **CITIZEN PARTICIPATION IN PUBLIC AFFAIRS**

A major approach to the improvement of democratic processes is through the nation's youth. Several grants were given during the year to organizations attempting to increase participation and understanding by college and secondary school students in public affairs.

Greater public understanding of the foundations of American democracy also was assisted through a grant to underwrite the publication of historically significant papers.

*College Students in Politics*

The Citizenship Clearing House was founded in 1947 by Arthur T. Vanderbilt, then Dean of the New York University School of Law and now Chief Justice of the New Jersey Supreme Court, to bring college students into active contact with elective and appointive officials. It was hoped that a realistic understanding of American political processes would counteract the persistent view that "politics is corrupt" (a Gallup poll indicated in 1955 that three out of four Americans did not want their children to enter politics, largely for this reason) and would encourage students to engage in political activity with the party of their choice throughout their lives. In establishing the Clearing House, Judge Vanderbilt emphasized that the nation can ill afford the loss of potential leadership implicit in a negative attitude toward political responsibility.

To support the program of the Clearing House in encouraging student awareness of and activity in politics, the Foundation this year gave \$975,000 to the Law Center Foundation, Inc.

The major purpose of the grant is to enlarge the programs of the Clearing House's affiliates in twenty-four leading colleges and universities, which in turn cooperate with nearly four hundred other educational institutions and more than three hundred voluntary organizations. These affiliates sponsor seminars and workshops to bring students and politicians together, student political unions for discussion of current issues, and workshops to develop such campaign skills as opinion research, fund-raising and writing political speeches. Some also have experimented with "internships" for students with political parties. For example, the University of Colorado affiliate arranged for four students to work on the 1956 campaign as interns. Two were assigned to the headquarters of the Republican candidate for governor and served as pages at the Republican National Convention in San Francisco. The other two worked at state Democratic headquarters and attended county conventions and the Colorado Democratic convention. Other affiliates are developing internships with their state legislatures.

The national office of the Citizenship Clearing House sponsors workshops which bring together political science teachers and practicing politicians to discuss ways of giving more realism to the teaching of politics. To date more than 175 teachers from more than 120 institutions in some forty states have attended these sessions.

The central office also publishes study and teaching aids which give the student or citizen suggestions on how he can be of service to his party; bibliographies in selected areas of political science; and model syllabi for courses in politics with emphasis upon political participation.

*Student political campaigner calls on auto dealer as part of project by University of Colorado to interest young people in public affairs*

*Kitchen intricacies are demonstrated by American "host mother" to Indian girls visiting under 4-H International program*

*The 4-H Clubs* An important means of education for citizenship and leadership among the rural youth of America has been the 4-H Clubs, which have been helped to establish their own national center at Chevy Chase, Maryland, with a grant of \$490,000. This will supplement the donations of the nearly two million 4-H Club members throughout the United States and its territories, who are contributing ten cents each to the Center.

Located on a twelve-acre site, the new Center will be equipped to handle training conferences for 4-H Club leaders, workshops and demonstration projects which will point the way to programing by local clubs, the annual national encampment, and meetings of a wide variety of extension and other agricultural associations. It also will serve as a headquarters for the movement's International Farm Youth Exchange Program, which "exchanges" rural youth between the United States and some fifty other countries. Orientation will be given at the Center to young people entering this country for experience in living and working on American farms and to young American farmers going abroad. Returning Americans will be assisted in preparing lectures and articles on their foreign experiences. An effort will be made to use these experiences in developing an organized program in international relations for 4-H Club members. Extension of the 4-H Club idea to other countries also will be directed from the Center.

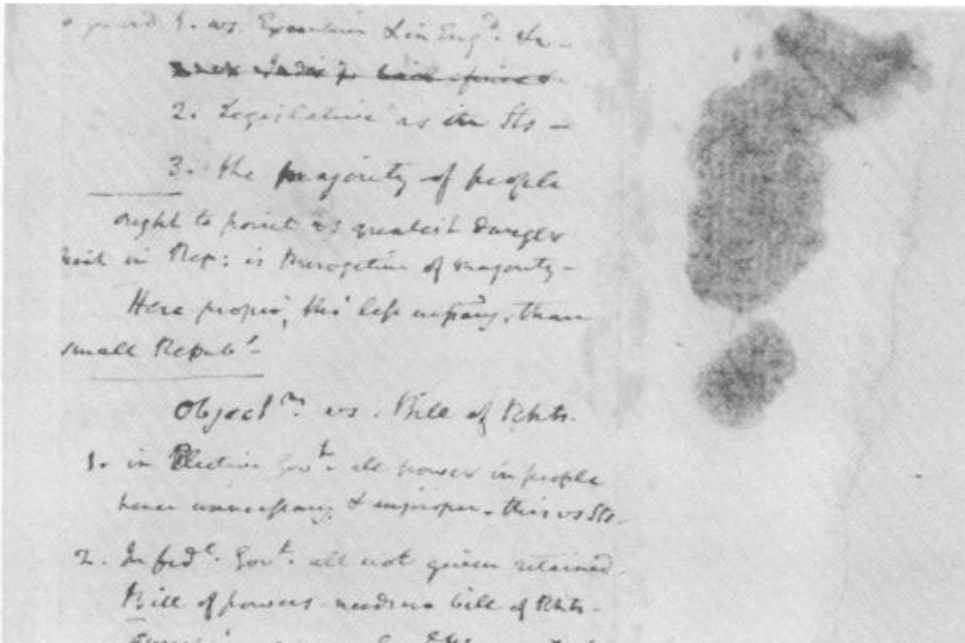

*The American Political Heritage* The National Historical Publications Commission has recommended to the President and the Congress the publication of the papers of more than one hundred noted Americans as a contribution to understanding of the American political heritage.

Editions of the papers of five "Founding Fathers"—Benjamin Franklin, John Adams, John Quincy Adams, Thomas Jefferson and Alexander Hamilton—and of other national leaders, such as John C. Calhoun and Henry Clay, already are in progress.

A Foundation grant of \$200,000 will help scholars of the University of Chicago and the University of Virginia to add to this growing list the papers of James Madison, fourth president of the United States and co-author of *The Federalist*, who exerted an important influence on the preparation of the Constitution and the Bill of Rights. It is expected that the Madison papers, most of which now are in the Library of Congress, the National Archives and a few other depositories, will fill more than twenty volumes and will be twelve years in publication.

Heretofore no editor of Madison's papers has attempted to distinguish between the texts as originally written by Madison and as later extensively revised by him. Some of these documents, however, such as Madison's notes on the Federal convention, have played a major role in the interpretations of historians and of the Supreme Court. Selections of the papers published by Dr. Gaillard Hunt in the first decade of this century, the only previous major effort, contain only a small fraction of the total and include few of the letters addressed to Madison which make his own letters meaningful.

The project also has received financial support from the Rockefeller Foundation and the Commonwealth of Virginia.

*James Madison's original papers, now being prepared for most complete edition ever published, include his comments on proposed Bill of Rights (above). At right, National Historical Publications Commission staff member examines shorthand notes from 1789 debate in House of Representatives on tariff-collection bill*

*Demolition of twenty acres of south Boston slums is initial step in urban redevelopment program now under way following metropolitan area research*

### **METROPOLITAN AREA STUDIES**

Nearly sixty per cent of the American people now live in 168 great urban complexes, and the rate of concentration is increasing rapidly; almost the entire increase in the population of the United States during the last five years has been in these metropolitan centers. The critical problems created by this crowding of population led the Foundation in 1955 to give \$25,000 to Boston College for research and citizen education in the problems of Greater Boston. In 1956 the Foundation made five additional grants for research on metropolitan problems and for related university training programs.

*Research in St. Louis* Two of these grants went to St. Louis, where a population almost as large as that of the city itself has grown up in recent years in suburbs outside the city limits. This decentralization has given rise to a multiplicity of overlapping and often conflicting county-city-municipality jurisdictions. Civic leaders, convinced that a broad look at the area's problems was required, sought Foundation help in financing research to lay the groundwork. In response, the Foundation gave \$125,000 each to St. Louis and Washington Universities for a two-year joint research project.

*Predicting New York's Growth* More coordinated development of the New York City metropolitan area, which includes parts of New Jersey and Connecticut, as well as suburban New York counties, is the object of a \$240,000 Foundation grant to the Regional Plan Association.

The grant will support an attempt to project the economic and demo-

graphic growth of the area over the next twenty-five years as a guide to planning by government and business. This will provide an analysis of labor supply, costs and requirements, and a framework for decisions on such matters as taxation, zoning, plant location and transport policy; land, water and power use; public finance and governmental services. Harvard University's Graduate School of Public Administration will undertake the survey on behalf of the Regional Plan Association. The Rockefeller Brothers Fund has also given support.

The project is expected to serve several secondary purposes, including the development of useful techniques of regional economic analysis. To exploit these potentialities, a supplementary grant of \$21,000 was made to Harvard University to provide seven graduate fellowships in the study of regional economic and local governmental problems.

*New York Area  
Government and Politics*

A five-year program of research and training in the government and politics of the New York area will be supported by a \$348,180 grant to Columbia University. An important purpose of the grant is to enlarge the number of scholars experienced in research on metropolitan problems and to afford promising young political scientists opportunities for field research.

*Grants from Foundation's \$200 million hospital appropriation were distributed in all states, District of Columbia and three territories. Gradation of map indicates geographical concentration of recipients*

# HOSPITAL AID

The Foundation made payment during this fiscal year of approximately the first half of the amounts granted to hospitals under an appropriation of \$200 million in December, 1955. The beneficiaries were 3,254 voluntary, non-profit hospitals in the United States, Alaska, Hawaii and Puerto Rico. The second half of the grants will be paid in March, 1957. An additional 150 hospitals still were under consideration for grants at the end of the fiscal year.

As noted in the Foundation's Annual Report for 1955, the rapid growth in the population of the United States and the accelerated development of medical knowledge and techniques have created heavy demands for expanded hospital services. Yet many hospitals already are in financial distress because of rising expenses; the cost of hospital care, for example, has risen more than 130 per cent in the last decade. Many of the hospitals which have managed to operate without deficits have done so only by foregoing services vital to the welfare of their communities.

The need of America's hospitals for funds was patently clear when the Foundation undertook, in 1955, to make large-scale applications of its

resources to problems besetting institutions and services basic to the national welfare. It had begun with education, determining first to help private colleges and universities to raise their teachers' salaries, and then deciding to help private medical schools meet the very high costs of their instruction.

In each case the Foundation sought to make its grants in a way that would further encourage general public support of these institutions, for it was obvious that Foundation grants alone would provide only moderate and temporary relief. When it was decided to extend aid to hospitals, therefore, restrictions were placed on the use of the grants: they could not be used to meet the operating expenses of services currently being performed, and they could not be used to liquidate existing indebtedness. The Foundation further emphasized publicly that it offered its grants as a "challenge" to the citizens of every community to recognize their hospitals' problems and give these important local institutions their fullest support.

It has been heartening to receive reports that the grants have, in fact, stimulated successful fund-raising campaigns. The recipients of the grants, which range in size from \$10,000 to \$250,000, are hospitals which were accepted for listing by the American Hospital Association as of December 12, 1955. Since the needs of communities vary, the governing authorities of each hospital were left free to determine how the grants would be used within these broad purposes: improvement or extension of facilities or services, additions to or training of personnel, or research.

*St. Anthony's Hospital in Terre Haute, Indiana, is among many using grants for construction to increase beds and services*

Analysis of the first thousand reports received by the Foundation from recipient hospitals showed that almost half were applying grant funds to new construction which would increase beds or services. Typical of the construction already under way, or planned, were: a new floor to provide a twenty-six-bed psychiatric department in an area where the only other hospital accepting psychiatric in-patients had a waiting list three months long; a forty-bed addition to provide a modern obstetrical department for an area which has one of the highest birth rates in the United States but is lacking in facilities commensurate with its need; remodeling of an out-moded 1910 building which houses medical and surgical beds; a speech-therapy clinic for a polio hospital; X-ray and operating rooms; kitchens and cafeterias; and post-anesthesia rooms.

Projects to strengthen services for children include: a building providing facilities for handicapped children, with emphasis on cerebral palsy, mental health and speech therapy; facilities for juvenile amputees, including clinical psychology services to deal with their emotional problems; and a cardiac-study center, together with surgical and treatment facilities for children, in an area where it has been necessary to go out-of-state for diagnosis and treatment.

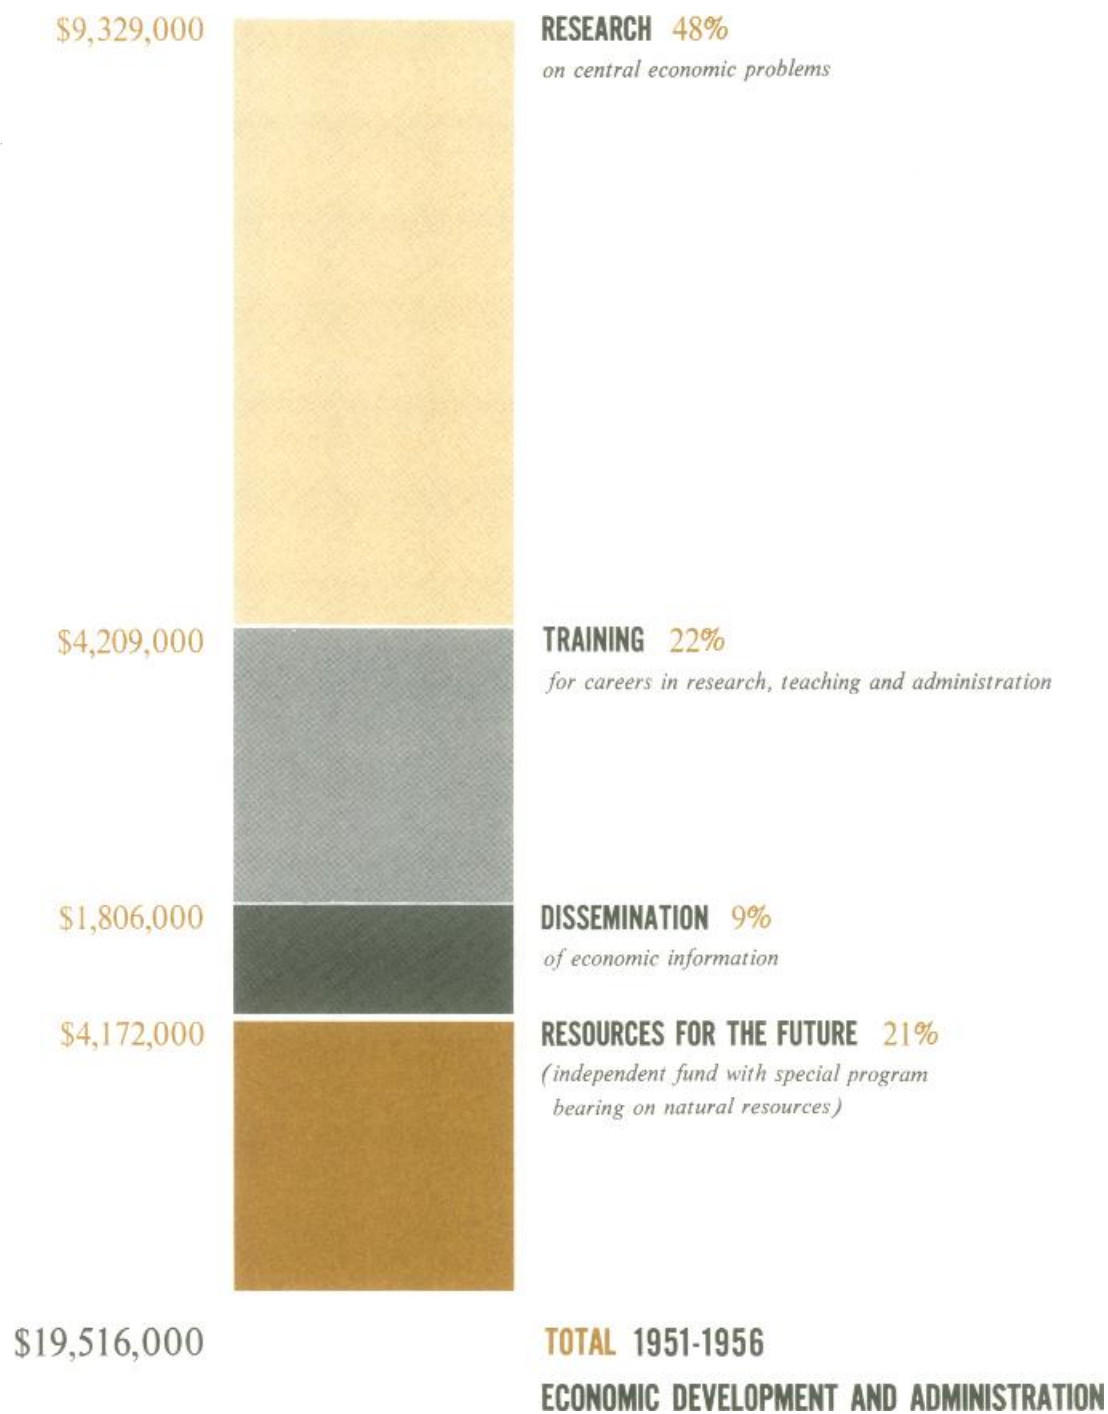

Among the items of equipment purchased are a cobalt machine for the treatment of cancer, the demand for which has been so great that it is in daily operation, with treatments given on Sundays to out-of-town patients; physical therapy equipment for a hospital which is the only one in its area able to provide this essential service; more powerful pumps and air compressors to enable a hospital for arthritic patients to use all of its hydro-therapy equipment simultaneously; motorized beds; and a nurse-call system for patients.

Although expenditures for training of personnel and for research were lower than for construction or equipment, a number of hospitals have included them in their plans. A large metropolitan hospital was considering the possibility of organizing a junior college offering courses for laboratory, X-ray, dental and medical-record technicians, and for doctors' office assistants and medical secretaries. The hospital noted that no such program existed in the area "although the need for personnel with these skills is acute." Other training programs included: a medical education course for resident physicians in a babies' hospital; an undergraduate nurse training scholarship program; and advanced training of laboratory personnel in bacteriology. Hospitals also reported the appointment of additional personnel, including physiotherapists, psychiatrists, directors of education and research, interns and residents, and nurses.

Research projects are being undertaken in a variety of fields, among them radioactive isotopy and children's diseases.

# ECONOMIC DEVELOPMENT AND ADMINISTRATION

**INCREASING THE SUPPLY OF COLLEGE TEACHERS**

**EDUCATION FOR MANAGEMENT**

**TRAINING IN ECONOMICS**

**GENERAL RESEARCH SUPPORT**

**RESEARCH PROJECTS**

**ECONOMIC INFORMATION**

**PROBLEMS OF THE AGING**

The dominant characteristic of the present American economy is change, far-reaching and rapid change, leading to an increasingly complex technical and industrial society. Such a society demands ever more thoroughly trained economists and administrators, an intensification of research into economic problems, and a much higher level of economic literacy on the part of its citizens.

In its efforts to help meet these needs, the Foundation has emphasized relatively long-term, large-scale and flexible support for selected institutions which train needed personnel and do pioneering research. It has attempted to strengthen the resources of these institutions for optimum contribution over the long run. With funds thus made available, scholars have been given opportunities to pursue research of their own choosing on the important problems of the economy.

In addition, the Foundation has sought out first-rate people and aided them in furthering their careers as teachers and researchers. Establishment of a faculty research fellowship program in economics and administration was one means to this end. Creation of a fund, to be administered by the Brookings Institution, which will provide research professorships for faculty members of undergraduate liberal arts colleges was an additional step in this direction.

### **INCREASING THE SUPPLY OF COLLEGE TEACHERS**

The continuing rise in student enrollments has brought the nation to the verge of a critical shortage of college teachers in every field of study. The shortage is intensified in the field of business administration by competing offers to faculty members from industry at salaries much above the university level, and by the rapidly rising enrollments in business schools. It is intensified in economics by a heavy drain of trained economists into industry, government service and international agencies.

To encourage a greater number of able students to undertake and complete graduate work in economics and business administration in preparation for careers in teaching and research, two fellowship programs were established by the Foundation in fiscal 1956.

#### *Predoctoral Fellowships in Business Administration*

The predoctoral fellowship program in business administration was designed to induce outstanding candidates for the Master of Business Administration degree, or those who have received it in the recent past, to pursue doctoral work. Such persons are much sought after by business firms. The Foundation hopes that, by encouraging a small number of them to forego business employment in favor of a teaching career, the supply of competent business administrators will be increased in the long run. Fellowship winners are not required to pursue doctoral work in business administration,

but may undertake advanced study in related areas.

During the 1956 fiscal year, grants from an appropriation of \$120,000 were awarded to twenty universities to provide thirty-five such fellowships. The grants were made for a single academic year. They may be renewed for a second year on demonstration of superior performance.

Invitations to submit nominations for the predoctoral fellowships were sent to fifty-nine universities in the United States which are members of the American Association of Collegiate Schools of Business and which have awarded graduate degrees in business administration. Nomination quotas for the fellowships were based on the number of graduate degrees granted during the period 1950-54. The Foundation was aided in its review of fellowship nominations by a screening committee which included: Melvin L. Anshen, *Professor of Industrial Administration, Carnegie Institute of Technology, Chairman*; Arch R. Dooley, *Assistant Professor, Harvard Graduate School of Business Administration*; Oscar H. Serbein, *Associate Professor of Statistics, Columbia University Graduate School of Business*. The list of fellowship recipients will be found on page 142.

*Doctoral Dissertation  
Fellowships*

The dissertation fellowship program was designed to permit graduate students in economics and business administration to devote a full year to their doctoral dissertations. Many graduate students, after completing all requirements for the doctorate except the thesis, are forced by financial pressure to take full-time jobs. Work on the dissertation then continues intermittently over several years and, all too often, is never completed. The purpose of this program is to accelerate the completion of doctoral dissertations, so that a greater number of persons can become fully productive in teaching or research careers in the shortest practicable time.

*Labor-management cooperation, which brings these union and plant officials together, is one area of economics and business administration chosen for training or research by Foundation fellows*

*Public housing (replacing slum in foreground) is among the doctoral dissertation subjects under study*

*Conference on Faculty Requirements*

Under an appropriation of \$150,000, thirty-four graduate students at twenty-two universities were awarded fellowships to complete their dissertations. Nominations for these fellowships were invited from fifty-six universities which had awarded doctorates in economics or business administration during the period 1950-54; nomination quotas were based on the number of degrees awarded during this period. The screening committee which reviewed nominations for the doctoral dissertation fellowships in business administration and economics included: James D. Scott, *Professor of Advertising, School of Business Administration, University of Michigan, Chairman*; Martin Bronfenbrenner, *Professor of Economics, University of Wisconsin*; Robert Dorfman, *Associate Professor of Economics, Harvard University*; C. Lowell Harriss, *Associate Professor of Economics, Columbia University*; John Mee, *Professor of Business Administration, Indiana University*. The list of fellowship recipients will be found on pages 143-144.

Because of the high quality of nominations and the good reception accorded these programs, the Foundation's trustees have approved further appropriations of \$399,000. From this sum, additional predoctoral and dissertation fellowship awards will be made in the spring of 1957 for tenure during the academic year 1957-58.

In 1955, the Foundation supported a conference, organized by the American Association of Collegiate Schools of Business, on the problem of increasing the supply of well-qualified teachers of business administration. The proceedings subsequently were published by Columbia University Press under the title *Faculty Requirements and Standards in Collegiate Schools of Business*.

The findings were considered to be of sufficient general interest to warrant a further grant, made during the 1956 fiscal year, to cover the cost of a summary, nontechnical pamphlet on the proceedings.

## **EDUCATION FOR MANAGEMENT**

Education for management is now in a period of unusually rapid transition. Traditional curricula and teaching methods are coming under sharp scrutiny. The relevance to problems in management of methods and principles derived from the behavioral sciences, the physical sciences and mathematics is being recognized increasingly by leaders of business education. Organization theory, operations research, and electronic facilities for data processing and computation are some of the developments which seem destined to change the shape of business education. The pressure of increased college enrollments, while burdensome, also offers unparalleled opportunities for

raising admission standards and the quality of instruction in business schools. The present, therefore, seems to be a particularly strategic time for fresh thinking and new appraisals of the aims and methods of education for management responsibilities.

Several grants were made in 1956 to examine and explore trends in management education.

*Wharton School Survey* A survey of professional education for administration, both public and business, is being conducted at the Wharton School of the University of Pennsylvania. A total of \$50,000, granted during 1955 and 1956, has been made available for this survey, which is under the general supervision of Dr. Joseph H. Willits, a former Dean of the Wharton School and former Director of the Division of Social Sciences of the Rockefeller Foundation. The study is directed toward an examination of goals and activities and a reshaping of the school's curriculum with the objective of responding, in the most effective manner possible, to new and changing demands for administrative skills in education, business and government.

*Case Method of Instruction* The case method of instruction in business, designed primarily to provide skill in problem-solving and decision-making through analysis of actual business situations, is gaining acceptance as a powerful teaching technique.

During the summer of 1955, sixteen faculty members of business schools across the country attended a Harvard Business School seminar in the case method with Foundation support. The success of this session led to the approval in 1956 of grants totaling \$11,712 to enable faculty members from fourteen business schools to participate in the eight-week seminar.

A faculty member from each of the following institutions took part in the 1956 session: Boston, Lehigh, Northwestern, Syracuse, and Washington Universities; the Universities of Connecticut, Detroit, Kansas City, Mississippi, Oklahoma, Pittsburgh, Southern California, and Washington; and the State College of Washington.

This experience stimulated some of the participants to initiate or strengthen the development of case collection programs at their own institutions. The University of California (Berkeley) has launched a case collection program, to be carried out over the next three summers, with the aid of a \$25,000 Foundation grant which will be matched by an equal amount from local business sources.

*Problems of Small Business Management* The problem of improving the efficiency and chances for survival of small business remains serious even during a period of prosperity. Many business schools throughout the country offer courses in small business management, but there is wide variation in the quality and content of these courses. As an initial step toward improvement of such instruction, the University

*Management Training  
for Europeans*

of Colorado held a conference of forty coordinators of small business management programs throughout the country at Boulder last summer. A Foundation grant of \$24,500 supported the conference, which explored new teaching materials and approaches.

The increasingly complex managerial skills made necessary by industrial, technological and social developments have resulted in greater need for managerial training abroad, as well as in the United States. Several institutions in Europe and Asia in recent years have been aided by the Foundation in their attempts to meet this need.

Among them is the European Productivity Agency (established by the Organization of European Economic Cooperation) which, with its national centers in member countries, has taken the lead in broadening management education as part of an over-all program to raise the efficiency of European industry.

To further this undertaking, a Foundation grant of \$50,000 was made to the Belgian Productivity Agency which will allow some fifty Belgian business executives to spend several months of study and observation at American business schools over the next three years. These executives will, upon their return, share their experiences by participating in management training programs at the four Belgian universities: Ghent, Liege, Brussels and Louvain.

The Foundation also supported efforts to strengthen the preparation of European union leaders through a grant of \$22,500 to the European Productivity Agency. Under this grant fifteen union leaders from Western Europe attended the Trade Union Program sponsored by Harvard University during the past academic year.

*Belgian businessmen participate in lecture review at session of Executive Program in Business Administration at Arden House*

## TRAINING IN ECONOMICS

Some thirteen thousand persons with varying backgrounds and training are serving today in the United States as economists in educational institutions, business firms, labor unions, research foundations and government. They exert an important influence on our society as originators of economic ideas, as consultants in policy making, both public and private, as administrators and as teachers.

Graduate programs in economics are the prime source of trained economists, and the Foundation is continuing its support of efforts by graduate centers to review and improve curricula and teaching methods.

*Yale University* Two years ago the Foundation supported a restudy by Yale University of its graduate training methods in economics. Consultants from other universities, as well as from industry and government, collaborated in this undertaking.

The result was an extensive reorganization of the graduate program. Major features added to it include: the concept of graduate work as a sustained period of full-time study, including a requirement that the doctoral dissertation be written in residence before accepting paid employment; greater emphasis on training in effective writing and research as essential professional skills; shorter, article-length dissertations, with provision for their publication; increased stress on the uses of economic training in business and government as well as in academic work. The program also makes possible summer research and internship programs in business, government and private research agencies.

For the next five years, a further Foundation grant of \$425,000 to Yale will provide fellowships for advanced graduate students, support publication of doctoral dissertations on a pilot basis, and provide one half of the endowment for a professorship in managerial economics. The remainder of the endowment for this chair will be obtained by the University under a matching requirement.

*University of Chicago* The University of Chicago in recent years has organized its research and training activities around a series of workshops in such areas as agricultural economics, money and banking, public finance, consumption economics, labor economics and econometrics. Each workshop includes from one to three faculty members and three to six graduate students. Aside from the intensive training in research methods which this permits, the students have the benefit of continuing group discussion of theses and the opportunity to relate their own work to that of others. To support the workshop program over the next five years, the Foundation made a grant of \$200,000 to the University of Chicago.

## GENERAL RESEARCH SUPPORT

Although most of the active research workers in economics and administration are employed on college and university faculties, the funds of most institutions are devoted largely to teaching budgets, which leaves research to be financed on a hand-to-mouth basis. To compensate for this deficiency, the Foundation has sought a variety of means to help support a continuing and vigorous research tradition in economics and administration.

### *University Research Professorships*

A program of rotating research professorships was devised primarily to free leading professors from teaching and administrative duties so that they might conduct research on problems of their own choosing.

Five such research professorships in economics were endowed during the fiscal year by grants of \$500,000 each to Chicago, Columbia, Harvard, and Yale Universities, and by a grant of \$250,000 to the University of California (Berkeley) which will be matched approximately by state funds. These grants were made on an endowment basis.

Each chair will be held for periods of one or two years by visiting research professors or by faculty members of the home university. Income from the endowment will be sufficient to provide salary, travel funds, and research and other assistance. One such chair, believed to be the first ever endowed by a foundation, was established at the Harvard Business School in 1954 under this program of long-term research support.

### *Research Professorships in Liberal Arts Colleges*

Faculty members of liberal arts colleges who wish to conduct independent research often are unable to obtain released time or other financial support. Accordingly, a fund of \$500,000 was approved to support several research professorships in economics for teachers in liberal arts colleges each year during the next ten years.

This program will be administered by the Brookings Institution. Competition for the awards is open to faculty members of selected four-year liberal arts colleges in the United States. Annual selection of candidates will be made by a committee of economists not associated with institutions whose personnel is eligible for these awards. Recipients of the awards will be free to conduct research on economic problems of their choice at their own institutions, or at any other location suitable to their field of study.

### *Funds for Problem-Oriented Research*

Nine universities were granted funds to be allocated by local committees for research in economics and business administration by members of their own faculties.

These funds will be used for research by faculty members of the grantee institutions. Such research, it is expected, will be directed at the identification of and attack on important problems in economics and administration.

The problem approach, as the term is used by the Foundation, involves the search for appropriate courses of action, whether by fundamental research of long duration to uncover the basic sources of difficulty, or by analysis and appraisal of recognized alternatives in a current situation.

These funds may be used in several ways. They may finance the release of faculty members from classroom teaching for research activity. They may make it possible for faculty members to forego summer teaching or other employment so that such time may be spent in research.

Grants totaling \$802,500, ranging between two and five years, were made to: University of California (Los Angeles), School of Business Administration; Stanford University, Department of Economics; Indiana University, School of Business; University of Michigan, Department of Economics; University of Minnesota, School of Business Administration; Northwestern University, Department of Economics; Vanderbilt University, Department of Economics; University of North Carolina (Chapel Hill), School of Business Administration; and University of North Carolina (Raleigh), Institute of Statistics.

#### *Faculty Research Fellowships*

A faculty research fellowship program was instituted this year as still another means of meeting the need for relatively small-scale support to promising researchers on college and university faculties. Under an appropriation of \$300,000, fifty-seven universities which had awarded at least one doctorate in economics or business administration during the period 1950-54 were invited to nominate faculty members for consideration under this program.

Of fifty-eight nominees proposed under the limited nomination quota arrangement, twenty-five received fellowships for the academic years 1956-57. The Foundation was advised by the following screening committee: James S. Earley, *Professor of Economics, University of Wisconsin, Chairman*; Moses Abramovitz, *Professor of Economics, Stanford University*; Walter Heller, *Professor of Economics, University of Minnesota*; William H. Newman, *Professor, Columbia Graduate School of Business*; J. Fred Weston, *Professor of Business Administration, University of California (Los Angeles)*. The list of fellowship recipients will be found on page 145.

A further \$360,000 has been allocated by the trustees to continue the faculty fellowship program during the 1957-58 academic year and to permit some expansion in the number of participating institutions.

*Professor James C. Bonbright, of Columbia University, on faculty research fellowship, studies application of the theory of public utility rate-making to actual practice and its impact on national welfare*

*Harvard Economic  
Research Project*

In addition to these over-all programs, a grant of \$240,000 was made to support the activities of the Harvard Economic Research Project over a six-year period. This center, under the direction of Professor Wassily Leontief, is engaged in a series of quantitative studies of the structure of the American economy, focusing mainly on inter-industry relationships and the interconnections between industry and other sectors of the economy. Equal support was contributed by the Rockefeller Foundation.

*Research Programs Abroad*

A Canadian Institute of Economic Research has been established at Queen's University, Kingston, Ontario, with the aid of a five-year grant of \$140,000. Faculty members and graduate students from Queen's, McGill, Toronto and other leading Canadian universities will work at the Institute during the summer, continuing their research at their home institutions during the academic year.

The subject of economically backward regions within highly developed economies will be considered by economists at the University of New Brunswick. Under a grant of \$20,000, a two-year exploratory investigation will be made of the reasons for the lag of the Atlantic provinces of Canada behind the general pace of Canadian economic development.

General support in the amount of \$50,000 for a three-year period was awarded the Institute of Applied Economics in Paris, a French center of empirical and quantitative economic research. The Institute, which is directed by Professor François Perroux, has recently undertaken an extensive program of studies in economic development.

## **RESEARCH PROJECTS**

Several research projects which show promise of advancing understanding of economic growth and stability, the organization and performance of economic units, and public and private economic policy, were supported during the year under review. The following were included.

*Long-Range Projections*

Dr. Gerhard Colm, chief economist of the National Planning Association, will undertake a study of long-range economic projections under a grant of \$45,000. Dr. Colm's book, *The American Economy in 1960*, has been used widely by students and economic forecasters in government and in industry. The grant will enable him to prepare and publish projections for major sectors of the American economy as of 1965 and 1970.

*Historical Statistics*

A complete revision of *Historical Statistics of the United States*, the standard reference work for long-term trends in the American economy, will be made through the collaboration of the Social Science Research Council and the United States Bureau of the Census. A Foundation grant of \$75,000

to the Council will aid in the revision. The volume incorporates key economic and social statistics of periods throughout American history.

*Planning for  
Underdeveloped Economies*

The problem of coordinated planning for underdeveloped economies will be explored by two Stanford University economists, Professors Hollis B. Chenery and Hendrick P. Houthakker, under a three-year grant of \$66,500. Much of the present planning in underdeveloped areas relates only to a single sector of the economy, such as agriculture, industry or foreign trade. This study will attempt to develop methods to insure that all aspects of the economy are considered together so that planning for development programs will be internally consistent.

In recent years, the Foundation has supported a research project on the labor factor in economic development, which involves faculty members of the University of Chicago, Massachusetts Institute of Technology, Harvard, Princeton, the University of California (Berkeley), and other institutions. One of the several studies now under way in various parts of the world is an examination of the recruitment and use of labor by major oil companies in the Persian Gulf area. Economists on the staff of the American University at Beirut are doing most of the field work. Cooperation and some financial support is being received from oil companies in the area. A Foundation grant of \$25,000 will help bring this study to completion.

*Crane-operator trainee in Persian Gulf area has kit checked by American instructor and Adenese teacher (r) in labor recruitment study*

*Potentialities of Atomic Energy* The National Planning Association in 1954 undertook a study of the economic potentialities and limitations of atomic energy. In this it was supported by Resources for the Future, Inc., an independent fund established by The Ford Foundation in 1952. Special emphasis has been placed in this survey on the uses of atomic energy in less-developed economies, including case studies of Japan, Brazil, Italy, Israel and other nations. Surveys of United States policy concerning atomic energy also are in progress. To assist in the completion of these studies during the coming year, the Foundation granted \$25,000.

*Economic Stabilization* Practical possibilities of reducing business cycle fluctuations will be explored by Professors Maurice G. Kendall and A. W. Phillips of the London School of Economics. A grant of \$25,000 for this purpose will be administered by the Institute of Statistics at the University of North Carolina. Professors Kendall and Phillips are pioneers in the use of electronic equipment to analyze complicated economic situations represented mathematically. By such analysis they hope to trace the effects—both actual and probable—of changes in business and government policy on the stability of the economy.

*Consumer Behavior* Personal savings and consumer attitudes toward the economic future are two important factors to be studied with Foundation support.

The amounts that people choose to save have important consequences for the growth and stability of the economy. Accurate data on family savings are scarce, however. A grant of \$39,600, to be administered by New York University on behalf of Consumer Behavior, Inc., will be used to conduct experimental work on ways of obtaining better information on family savings through household surveys. The project will be directed by Professor Robert Ferber of the University of Illinois.

For several years, the Survey Research Center at the University of

*Interviewer questions an Iowa farmer in cornfield for information about behavior of family as economic unit*

Michigan, with Foundation support, has been studying consumers' attitudes toward the economic future and how these attitudes influence buying behavior. Particular attention is being paid to automobiles, household appliances and other consumer goods the purchase of which may be hastened or delayed. Four sets of interviews already have been conducted with an identical sample of households reflecting the varying economic conditions that prevailed from 1953 through 1955. An additional Foundation grant of \$38,500 will make possible a further round of interviews and detailed analysis and publication of the findings over the next three years.

*Private and  
Public Economic Policy*

The economics of American radio and television broadcasting is an area which has had little impartial study. With the assistance of a Foundation grant of \$11,700, Professor Ronald Coase of the University of Buffalo will undertake an analysis of the ways in which broadcasting is financed, the organization of the industry, and the record of government regulation. Professor Coase is the author of an authoritative study of British broadcasting.

Professor Murray Benedict of the University of California (Berkeley) will survey methods and problems of liquidating excess stocks of United States' farm products. A Foundation grant of \$6,200 will be combined with sabbatical salary and other support from the University.

### **ECONOMIC INFORMATION**

The often decisive character of economic factors in national and international affairs makes economic understanding a vital part of the education of all Americans. And there would be a firmer basis for international cooperation if more accurate knowledge of the American economic system were available in other countries as well.

*College Economics Instruction*

The only formal instruction in economics received by most college students is given in elementary courses in the principles of economics. On such instruction depends, in no small measure, the ability of our college-educated population to appraise economic issues and proposals of public policy.

During the past several years, the Department of Economics at Grinnell College has been experimenting with an introductory course that attempts to develop student interest in economics by relating the subject to other interests students already possess. The Foundation granted \$5,000 to Grinnell for further experimental work on course materials.

A grant of \$4,886 was made to the University of Delaware for the purpose of developing a course for liberal arts undergraduates on the role of business in American civilization.

*Improving Understanding of  
American Capitalism*

Many aspects of American capitalism are seriously misunderstood in this country and, to an even greater extent, abroad. Most of this misunderstanding is based on insufficient, outdated or distorted information and presents serious potential dangers in relations with other nations of the free world.

The Foundation granted \$25,000 to Harvard University for the purpose of studying methods of communicating the essential nature of contemporary American capitalism abroad. The project will be under the direction of Raymond Miller, Visiting Lecturer in Business Administration.

The Foundation is supporting another study of the nature of American capitalism through a grant of \$8,300 to the University of California (Los Angeles). This grant will assist Neil H. Jacoby, a former member of the President's Council of Economic Advisers and Dean of the U.C.L.A. School of Business Administration, in making a comparative study of the industrial societies of America and Western Europe.

#### **PROBLEMS OF THE AGING**

Men and women who have reached the age of sixty-five form a portion of the American population that is large and growing. They already total more than fourteen million persons, and their number is increasing twice as rapidly as the population as a whole.

This change in the composition of American society has only recently been reflected in research in the medical and social sciences. There is, of course, need for further research.

More pressing, however, is the need for making existing knowledge available in readily usable form. The local agencies responsible for most programs to assist the aging have so far been able to profit little by the research that already has been done and by the knowledge and experience that has been gained in other communities and by other agencies. Properly informed, they can be expected to be more effective in their attempts to provide employment and other means of economic security, special housing and living arrangements, medical and nursing care, and means of filling the educational, recreational and spiritual needs of older people.

Desiring to help these many local groups improve their operations, the Foundation in 1956 approved an appropriation of \$500,000 to be granted to the National Social Welfare Assembly for the use of its National Committee on the Aging during the next three to five years. The funds will enable the Committee to expand its general program, particularly its work of collecting and evaluating the results of research, experimentation and operating experience in programs for the aging and making this knowledge available for the practical guidance of interested groups throughout the United States.

# INTERNATIONAL UNDERSTANDING

**STUDY OF FOREIGN PEOPLES**

**STUDY OF INTERNATIONAL RELATIONS**

**INTERNATIONAL LEGAL STUDIES**

**INFORMING THE AMERICAN PUBLIC**

**PERSON-TO-PERSON CONTACTS**

**GRANTS IN EUROPE**

## STUDY OF FOREIGN PEOPLES

The education of most Americans who are now adults involved little or no study of peoples who account today for seventy per cent of the world's population. Whether in high school, college or graduate school, students formerly were concerned with a world almost wholly classical and Western.

In recent years, however, steps have been taken on every educational level to broaden the geographic range of school interests. Most striking perhaps, and certainly most significant, are the changes on the graduate level, where the Department of State recently was able to count nearly eighty programs for the study of foreign peoples, almost all of them established within the past decade.

The general aim of these programs is to introduce Americans to foreign peoples in a new and more comprehensive way—not only through their language, literature and history, but also through studies of their economic, political and social life, their religion, philosophy and law. It would not be true to say that many universities already are doing this. Especially as regards Asia, the Near East and Africa, too little is known by too few Americans. Yet the need for training of this sort continues to grow among professional scholars and others with an interest in foreign affairs, particularly government officials, businessmen, writers and editors.

For five years the Foundation has lent its support to the attempts of universities and scholarly associations to overcome this shortage of knowledge and of trained men. It has aided their teaching programs and given fellowships to students. It has helped them to do a greater amount of research, especially on-the-spot study of conditions abroad. And it has made grants to develop ways of breaking down the barriers of language and distance that stand between Americans and those parts of the world.

### *Scholar-Correspondents for American Universities*

One unique effort to increase United States knowledge and understanding of events abroad is being made by a group of ten colleges and universities and an organization known as American Universities Field Staff, Inc. It had its beginning in the work of two imaginative Americans.

In 1925, the late Charles R. Crane established and endowed the Institute of Current World Affairs to work on a problem that had long interested him: how to improve the exchange of information between the United States and other parts of the world. Under the direction of Mr. Crane's early associate, Walter S. Rogers, the Institute has proved to be a highly original and stimulating force. Although it has experimented in various ways, the focal point of its work has been the training of men who combine the skills and talents of the scholar, the teacher and the foreign correspondent—each a worthy representative of his academic field, trained in the language, history and culture of a foreign area, interested primarily in its current prob-

*Far East problems studied by Albert Ravenholt, of the American Universities Field Staff, shown left with Filipino children, are described later for students in University of Kansas class (above)*

lems, and able to write and speak interestingly about them.

Out of the Institute's experience developed the idea of a professional agency through which these men could serve the universities, publishing houses and other institutions that need and want the kind of foreign reporting they can provide. In 1951, seven colleges and universities founded the American Universities Field Staff, Inc., and conducted a trial program for one academic year. Newsletters and special reports by the Institute's scholar-correspondents were sent to faculty members of the sponsoring institutions interested in the foreign areas covered. Four of the field men returned to spend a year visiting the seven campuses, lecturing, taking part in seminars, and meeting informally with teachers and students. The following year, A.U.F.S. began making appointments to its own permanent staff, and The Ford Foundation granted \$500,000 to help finance the program.

By the summer of 1956, A.U.F.S. had ten member institutions and some thirty subscribers (other educational institutions, business and publishing firms, and public affairs groups) to its reports service. Eleven staff members were covering parts of every continent, where they have lived and worked and studied current affairs for periods ranging from three to fourteen years. The program, however, although highly regarded by those it has served, has not yet been able to meet its expenses through membership and subscription fees. The Foundation, therefore, has made a grant of \$1,550,000 to enable the organization to continue its program for another ten years.

*Fellowships for Training*

The shortage of Americans with a comprehensive understanding of other parts of the world became a concern of The Ford Foundation when it began its expanded program in 1951. That year the Foundation offered fellowships to young people who wanted to acquire a broad knowledge of one or more countries in Asia and the Near East. It has continued to do so every year since, extending the program in 1953 to include Africa, and in 1954 to include the Soviet Union and Eastern Europe. By now more than five hundred men and women have been helped to study these regions.

In awarding its fellowships, the Foundation has aimed not at producing a corps of narrow specialists but at giving economists, historians, lawyers and persons in the other social sciences, humanities and professions an understanding of these other areas of the world. Many, of course, are still engaged in their studies, but some have completed their training. About fifty of them now are journalists, have gone into business or government service, or have joined the staffs of nonprofit organizations, where both their professional skills and their knowledge of conditions abroad are needed. More than seventy-five have gone into college and university teaching.

Many of these young teachers are giving special courses on foreign areas, and not only in the established centers of foreign-area study. Most are teaching at least some conventional courses in the humanities and the social sciences in which they find themselves able to use their foreign-area training. This means that the fellowship program, in a small way at least, is also contributing to the long-range goal of creating among students, within the framework of the traditional liberal arts, an awareness of cultures other than their own.

*Visit to "untouchables" near Bangalore is daily routine for Gertrude Woodruff of Philadelphia, now studying Indian values and beliefs on Foundation fellowship*

*Egyptian village housing, often cramped as at left, led fellowship student Marvin Sevely to design new floor plan (above), which will be used in building project. He is now a consultant to the government of Turkey*

During the past year, the Foundation granted fellowships to 137 individuals whose names will be found beginning on page 132. In addition, it made grants to twelve universities to help students of foreign areas on their own campuses who were in need of temporary financial aid.

Approximately \$900,000 has been set aside for the fellowship program for the 1957-58 academic year.

#### *Near Eastern Studies*

During World War II, the Department of Oriental Languages and Literatures at Princeton University undertook a large-scale training program in Arabic and Turkish for the armed forces. The experience suggested that, basic as are the classic fields of language, literature and history to understanding a foreign people, they are not enough; to know the modern Near East also requires study of its forms and concepts of government, its social, cultural, economic and artistic life.

By 1947, two more things also seemed clear: the United States would have a continuing interest in the Near East, and, in the future, most young people who would want to learn about the Near East would go on to become, not specialized scholars as in the past, but government officials, businessmen, writers and teachers. In this setting, Princeton established its

Near East studies program, the first at an American university which aimed to encompass research and training on all aspects of Near Eastern life.

The Princeton experience was duplicated on many other campuses which had taken part in the wartime training program, and the same lesson was widely drawn from it. But, like the others, the Near Eastern program at Princeton has moved slowly since its establishment, for want of trained people as much as for lack of funds. As qualified people have become available, however, and with support from foundations and business corporations, it has spread out to include teaching in language, literature, history, political science, sociology, economics and law, all as they bear on the important Near East area.

Now, a Ford Foundation grant of \$275,000 will help the University to add a substantial research element to the program during the next five years.

*Work in Oriental Languages*

A concerted effort to improve America's fluency in foreign languages, especially those of Asia and the Near East, was begun during World War II. The Government supported a considerable amount of work on foreign language texts, and "the Army method" became famous as a way of learning languages in a relatively short time. But when the war ended, and government support with it, a large body of work remained unfinished—dictionaries, for example, to aid students of Korean, Thai, Burmese and many other languages. Work was not resumed until 1952, when the Foundation granted \$250,000 to the American Council of Learned Societies Devoted to Humanistic Studies, commonly known as A.C.L.S.

Through its Committee on Language Programs, which is composed of some of the nation's most able linguistic and language-teaching scholars, the A.C.L.S. distributed these funds to scholars throughout the United States. By early 1956, they had prepared materials on twenty-eight languages of Asia and the Near East.

Twelve books had been printed or were ready for publication, including introductions to spoken and written forms, readers, grammars and basic linguistic descriptions of Burmese, Mongol, Persian, Thai and Tibetan; Pashto, spoken in Afghanistan and nearby parts of Pakistan; Uzbek, spoken in a Central Asian republic of the U.S.S.R.; Amoy Hokkien, a dialect of southeast China; Berber, spoken in North Africa; and Lao, the language of the young state of Laos. Thirty-six dictionaries and other books were in various stages of completion.

Early in 1956, the Foundation granted a further \$250,000 to the A.C.L.S. to continue this work.

*Word "peace" is shown on opposite page in twenty Asian and  
Near Eastern languages little known in United States.

*Chinese Language Training  
in Formosa*

*American student learns  
advanced Chinese under  
native Formosan teacher*

A special problem presents itself in the case of the Chinese language, because it is particularly difficult for Americans to master and because Americans once received their advanced Chinese training in mainland China, an area closed to them today.

Early in 1955, soon after the Foreign Service Institute began to set up a language school in Formosa for United States Government personnel, the Foundation invited scholars of Chinese affairs from four universities to discuss whether something similar should be done for persons outside the Government. There was agreement on the need for facilities of this sort, and representatives of Cornell University agreed to take responsibility for consulting other universities with Chinese studies programs of some size (eventually eleven others in the United States and Canada were consulted) and for working out a plan of action.

A final plan, calling for a two-year experiment, was approved by the Foundation this year and supported with a grant of \$153,600 to Cornell. Five young Americans were selected by an inter-university committee a few months later as the first group to be aided under the program.

*Training and Research  
on Indonesia*

Another Foundation gift of the past year will help finance a rather new sort of arrangement between an American university and an educational institution abroad: a cooperative plan to aid both the American school's foreign-area program and the foreign university's program in economics and sociology. The institutions involved are the University of California (Berkeley) and the University of Indonesia.

With its eighty million people, Indonesia is the sixth largest nation in the world and, after India, the largest state to attain independence since World War II. It ended its colonial status, however, with so few trained administrators, scientists and scholars that great burdens have rested on a relatively small number of able men. The extreme shortage of trained manpower—and the resulting scarcity of knowledge about the economic, social and political facts of life in Indonesia—is a major obstacle to the nation's development.

America's knowledge of Indonesia, understandably, has not progressed far in these circumstances, either. Nor has the University of California's attempt to develop a program of studies bearing on Indonesia and the rest of Southeast Asia—an area given very little attention by American universities generally—been proceeding satisfactorily.

A visit by two University of California faculty members to Indonesia in 1955 led to a joint program with the University of Indonesia's Institute for Economic and Social Research to meet both of these problems. The Foundation has since made grants totaling \$451,130 to help the universities carry it out.

*Research in Comparative Politics* One aspect of foreign societies about which American information is particularly limited is politics: not the formal structure of governments or their day-to-day actions, but the significance of the political parties and interest groups that stand between populations and their political leaders, and the way these parties and groups shape political decisions.

The Committee on Comparative Politics of the Social Science Research Council, which consists of some of America's leading students and teachers of comparative politics, worked for two years to develop a comprehensive approach for studying and comparing the politics of foreign peoples. The Foundation, which already had supported research on political processes in Japan, India and Indonesia, granted \$260,000 to the S.S.R.C. for a five-year program of research.

*Comparative Urban Research* Some Foundation grants to aid the search for a more precise understanding of the special problems of American cities, and for better ways of dealing with them, have been described on pages 66-67.

But the fast growth of cities is not only an American, or even Western, phenomenon. Some of the largest cities of the world are located in Asia, and many of these—Djakarta, Rangoon, Bombay, Karachi, for example—have doubled or nearly doubled in size in the past ten years. Most studies of urbanization, however, have dealt with individual Western cities. Although this approach has been useful, and even necessary, there is a need also for comparative research, including studies of cities in non-Western societies.

A program of such studies at the University of California (Berkeley) will be aided during the next five years by a Foundation grant of \$200,000. Directed by Dr. Kingsley Davis, the research will deal with some nine hundred cities with populations of 100,000 or more.

## **STUDY OF INTERNATIONAL RELATIONS**

The United States is represented abroad today by more than ten thousand American civilian employes, exclusive of Defense Department personnel. Additional thousands are occupied in Washington with the conduct of public business abroad. Their number has increased some five or six times since before World War II, and their education and training—like the public business for which they are responsible—have become matters that affect the interest of every American citizen.

For all practical purposes, the nation's diplomatic and other civilian overseas representatives are trained outside the Government itself by colleges and universities throughout the country. And this is not the only such responsibility these educational institutions bear.

A democratic nation needs independent, nonpartisan commentators on

its foreign policies, people looking to problems of the future—which government officials, burdened with the urgent problems of the day, have little time to consider—and presenting thoughtful alternatives to official courses of action. It also needs a body of citizens capable of making decisions on issues of American policy abroad which may affect their freedom and security. Yet there seem to be few educators in the United States today who are satisfied that the preparation schools and colleges are giving to future citizens is adequate.

The difficulty is only partly the geographical one pointed out in previous pages. With the development of technology and mass aspirations, international relations have come to involve far more than dealings between governments. The diplomat or student of international relations today cannot afford to ignore the press, educational systems, political parties, industrial development, the discovery of raw materials, the growth of populations, or popular attitudes toward other countries. And so the question has arisen whether he can fail to make use of the skills of such relatively new approaches to knowledge as social psychology, sociology, anthropology and comparative politics. It is the opinion of a steadily growing number of persons that he cannot. Slowly, “international relations” is coming to be looked on as an effort to relate all relevant fields of study to the problems that exist between and among nations.

The intellectual problems this presents to the individual and the administrative problems it creates for an educational institution are readily apparent. The Foundation began making grants in 1955 to help educators and educational institutions find ways of resolving these problems. Additional grants were made in 1956.

*Columbia Program  
in International Affairs*

A major grant—one of \$1,275,000—was made to Columbia University to aid its program of advanced research and training in international affairs.

Columbia has long been noted for its international interests. An indication of its stature was seen in 1954, when the University’s bicentennial was observed by educational institutions in thirty-seven foreign countries. Among students as well, the University has become a natural center for those with a special interest in international relations. Last year, Columbia’s graduate students concentrating on international studies numbered fully 575, half of whom planned careers in government service.

Columbia has the resources to train such a large number of people in a wide range of international fields. It has a separate School of International Affairs and, associated with it, a complex of institutes concentrating on foreign regions: a Russian Institute, a European Institute, an East Asian Institute, and a Near and Middle East Institute. In addition, international studies are offered in Columbia’s Faculty of Political Science, its School of

Business, and its three undergraduate colleges.

Fortunately, Columbia also has been in the forefront of the movement among universities to coordinate the international interests of their faculty members, whatever their academic fields might be. The University is working to bring orderly cooperation to both its teaching and its research on international affairs, so that the work of its students and scholars may be enriched by the knowledge and insights of the whole University community.

The Foundation's grant will help Columbia accelerate this program over the next ten years.

*Fellowships for Training*

Helping educators in international relations to obtain a broader background than the universities traditionally have provided is the purpose of a fellowship program begun by the Foundation in 1955. Funds were set aside at that time for fellowships for the 1956-57 academic year, and these have since been granted to nine individuals whose names appear on page 140. Approximately \$100,000 more was made available during this past year for fellowships in the academic year 1957-58.

The fellowships enable the recipients to broaden their backgrounds in one of several ways. A person who has studied international relations as traditionally conceived is given an opportunity to study a foreign area, such as Southeast Asia, or to take advanced training in one of the other social sciences, such as social psychology. If he already has advanced training that bears on a foreign area or is trained in one of the social sciences other than international relations, or one of the humanities, he is given the means to do graduate work in international relations.

The fellowships last year aided men who had the Ph.D. degree and had been teaching for four or five years.

## **INTERNATIONAL LEGAL STUDIES**

The changing role of the United States in international relations has had its impact on American law schools as well. With the great increase in recent years in governmental and private transactions across national boundaries, there has come a greater need for attention to problems of international and foreign law. Individual lawyers, more likely now to be called on to represent clients with international interests, are required to know international law and to understand at least the general outlines of foreign legal systems.

Sound American relations with other countries depend fully as much on the lawyer-citizen, however, as they do on the legal specialist. In the United States, as in many other countries, the lawyer is an articulate and influential member of his community and frequently a public official. In recognition of this fact, many of the nation's law schools are seeking better ways to

*American law schools are training a growing number of foreign students like those from Chile, Colombia and Egypt in front row of jury box at university moot court. Schools also are establishing programs to teach foreign law and culture in U.S.*

prepare their students for possible careers in American government and to prepare them for public leadership in dealing with international and foreign problems. (See “Legal Education and Public Leadership,” beginning on page 61.)

Progress in the latter instance has been slow, a fact which can be traced to various causes. Not least among them is the necessity of reducing for the first time a large body of knowledge to materials for teaching. Another is the expense. Conducting research and training the teachers that are needed, both of which must often be done abroad, require more funds than law schools have been able to obtain from their customary sources of income. Training foreign students—also a part of the international programs of some law schools—is expensive, too.

For these reasons, the Foundation began in 1954 to give financial aid to law schools for the general support of their international programs. Grants went to five schools for the same purpose this past year, bringing the total so aided to a dozen. Other grants were made for several corollary purposes: research, cooperative activities with foreign law schools, and translations and collections that can help bring American lawyers and their foreign colleagues closer together in spite of the languages and distances that separate them.

*International Programs  
in Law Schools*

The 1956 grants to law schools for general development of their international legal studies programs over a ten-year period were as follows:

Cornell University Law School, \$296,000

New York University Law School, \$375,000

Southern Methodist University Law School, \$250,000

University of Texas Law School, \$100,000

Tulane University Law School, \$275,000

These five law schools share several broad objectives in their international programs: to give more attention to international and foreign problems in the undergraduate training of American lawyers; to provide training for able lawyers from other countries; and to conduct research and train teachers and others with a special interest in international and foreign legal problems. Cornell, for example, has offered since 1948 an LL.B. degree with specialization in international affairs, and with this grant its law school is initiating a training program for young law teachers from abroad.

The other four law schools have given varying degrees of attention to inter-American law in their international programs. New York University has an Inter-American Law Institute for training Latin American lawyers in the law of the United States, and now it is instituting a program to train Americans in the law and culture of Latin America and Europe.

Southern Methodist University conducts institutes in international and comparative law for experienced lawyers of the Western Hemisphere and in American law and government for persons from Europe and the Middle and Far East. It is adding a program of advanced studies in international and comparative law for American lawyers.

Tulane University, which long has had a special interest in Latin America and Europe growing out of Louisiana's economic and cultural ties with these areas, is expanding the program of its Institute of Comparative Law. The Institute already has brought teachers from other countries to the law school and sponsored research in comparative law.

The University of Texas is increasing its offerings in international and comparative law, which have included courses in legal aspects of international trade and the influence of French and Spanish law on the law of Latin America.

*Cologne-California Law Project*

One way of overcoming the barriers to international understanding among lawyers is a continuing relationship between law schools of different countries. This provides a medium for training lawyers and teachers in foreign law and for carrying out research on foreign and international subjects.

Grants to the University of Cologne in Germany and to the University of California (Berkeley), totaling \$276,000, will help them work together in these ways during the next eight years.

*Research: Joint International  
Business Ventures*

Government officials and businessmen are giving increasing attention to a method of international finance known as a "joint international" venture—one financed both by private and public funds and involving several countries. The oil consortium in Iran is a well-known example.

Such ventures rapidly are becoming common in many parts of the world, but because of their very newness they may encounter unexpected hazards. There has been no over-all study of the legal, business and political problems they involve in different areas, the advantages and disadvantages of the different forms they have taken, or their prospects for the future.

Such a study is now being undertaken by scholars at Columbia University with the help of a \$195,000 Foundation grant. It will encompass joint international ventures in seven countries of Latin America, South and Southeast Asia, the Middle East, the Far East and Europe.

### **INFORMING THE AMERICAN PUBLIC**

Something already has been said of developments in American education that promise to give future generations a more adequate basis for understanding world events. But what of the present generation, which bears present responsibilities?

The American people are provided with a certain amount of reporting and interpretation of international developments by official sources: departments of the executive branch of the Federal Government and committees of the Congress. But they depend primarily on other, independent sources: the news media; the analyses of scholars and observers outside government; travel and other personal contacts with foreign peoples; the extension activities of educational institutions; and the information and education programs of private citizens' groups. A few grants to help support activities of these two latter kinds were made in 1956.

*Foreign Policy Association*

Among the many private, nonpartisan organizations devoted to educating and informing the people of this country about current foreign policy issues, one of the largest and broadest in scope is the Foreign Policy Association.

Founded on the eve of the armistice that ended World War I, the F.P.A. sought for thirty years to aid public understanding of United States foreign policy through a program of lecture meetings, research and publication. It was during this period that it began publication of its *Foreign Policy Bulletins* and *Headline Series* booklets.

In 1947, however, the Association decided that with the great increase in the United States' international responsibilities, a broader American public needed to recognize the magnitude of international issues and become informed about them. There were then some thirty local and regional

groups which were carrying on educational programs about world affairs in their own communities; the F.P.A. decided to concentrate on increasing the number and effectiveness of these organizations. In a few years' time, by providing encouragement and advice and through small gifts of funds to help them make a start, the Association helped to increase the number of world affairs groups to almost two hundred, including sixty-five with professional staffs.

This extension of the F.P.A. program was made possible in part by grants totaling more than \$1 million from the Fund for Adult Education, an independent organization established and financed by The Ford Foundation. This past year, the Foundation itself granted funds to enable the F.P.A. to continue and strengthen its program in the future. The grant totals \$1.5 million and runs for five years. To carry out the program it has planned, however, the F.P.A. hopes to raise more than this sum, as it has in the past, through contributions from other sources and through subscriptions, membership dues and service fees.

The Foundation also agreed to provide \$150,000 per year for five years to the F.P.A., when matching funds from other sources are assured, to support a public service center on world affairs. The center, recently opened near the United Nations headquarters in New York, is intended to provide a comprehensive collection of information and materials on world affairs and the citizen's role in making foreign policy. The center will serve a wide variety of organizations and institutions interested in conducting information and education programs on world affairs.

### **PERSON-TO-PERSON CONTACTS**

It is hardly surprising that person-to-person contacts are coming to play a still larger role in international affairs than they have in the past. Much human experience has indicated the desirability of this expansion, and the ease of arranging international travel in recent years has made it possible. Yet, personal contacts present problems which are equal in importance to the opportunities they provide.

The opportunities are readily apparent: a growth in understanding on the part of visitor and visited alike, and deeper insights and more lasting impressions than other means of communication usually permit. On the other hand, although almost half a million foreigners now visit the United States every year and twice as many Americans go abroad, there are important groups of persons which are not well represented among these travelers, or would not be if they had to depend entirely on their own resources. In addition, the differences of culture which exist between the United States

*First visit to Denver supermarket is part of introduction to "American way of life" for Turkish teachers, in U.S. for professional training*

and other countries can turn personal contacts into sources of misunderstanding rather than of harmony and good will.

This is recognized by many interested agencies. Numerous governments and hundreds of private groups are supporting programs to "exchange" students, teachers and scholars between this and other countries. A few also are enabling persons who are leaders in other walks of life to travel for study or observation. However, there still exists a need for improvement if the people of the United States and other nations are to understand each other better. The Foundation granted funds during the past year to help make improvement possible in several ways.

*Foreign Students  
in the United States*

Some 36,000 foreign students are studying this year on campuses throughout the forty-eight states. Although the number may appear insignificant next to the over-all American college and university enrollment of three million, it is large compared to the number of foreign students in this country only a few years ago. In the 1930's they numbered few more than seven thousand a year. The figure shot up to about twenty thousand soon after World War II and has increased steadily ever since. The prospects, moreover, are for a continued though less rapid increase during the coming decade, particularly among foreign students seeking advanced training.

It is noteworthy, too, that the greatest increase has been among students from non-Western countries, who are more difficult to fit into the American academic system and more likely to experience personal difficulties in adjusting to American ways. For example, only ten or fifteen students came from India each year before the war, whereas now some eight hundred are coming every year.

The reasons for this increase are many, but essentially it stems from the desire abroad for American training and the desire in this country to encourage understanding of America abroad. Unless considerable care and atten-

tion are given to the problems of foreign students, however, both these important goals can be frustrated, as a growing body of research has shown. And because of this, the Foundation, rather than simply add to the number of foreign students in this country, has concentrated its aid on a few national organizations whose work affects the quality of the foreign student's American experience. Three such organizations received grants in 1956.

One, the Y.M.C.A.'s Committee on Friendly Relations Among Foreign Students, helps students arriving at ports of entry with the personal problems that often confront them in their first hours in the United States.

On an increasing number of campuses, a member of the second group, the National Association of Foreign Student Advisers, is available to help foreign students plan their academic programs and make arrangements for housing and the like. The foreign student adviser is largely a postwar phenomenon in American higher education, and he is helped considerably in his work by contact, through the National Association, with his counterparts on other campuses.

The services of the Committee on Friendly Relations Among Foreign Students and the National Association of Foreign Student Advisers will be maintained through the next five years with partial support from Foundation grants—\$60,000 to the National Board of the Y.M.C.A. for the former, \$130,000 to the latter.

The third organization is the Institute of International Education, which keeps in touch with special committees in eighty countries which select students to come to American universities, some on private funds or scholarships from their own governments, some with aid from the United States. Through these committees or by direct correspondence with the Institute, foreign students obtain information on a wide variety of matters, ranging from the requirements for a Ph.D. degree at Stanford University to the cost of living in Nashville. In turn, the Institute aids American universities in evaluating the credentials of foreign applicants for admission.

The I.I.E. received a grant of \$3.5 million which will run for ten years. It is expected to enable the Institute to maintain a high level of service to the government agencies and private groups which sponsor the more than two thousand educational exchange programs now under way between the United States and other nations.

The grant to I.I.E. will benefit Americans who want to study abroad, as well as foreigners who want to study here. It is probably as a managing agent of the United States Government's Fulbright program, under which thousands of Americans have studied or taught in foreign countries in recent years, that the Institute is best known. Because it helps manage this and smaller, privately supported programs of a similar nature, the Institute is an important source of information for Americans about scholarship oppor-

tunities, entrance requirements, curricula and facilities abroad. Americans account for a large share of the more than 100,000 individuals who seek information and advice on international education from the Institute every year. With the coming increase in university enrollments, the demand for study abroad by American students is expected to rise substantially.

*Foreign Leaders  
in the United States*

One private organization established in recent years to give influential adult citizens of other countries an opportunity to visit the United States is the Eisenhower Exchange Fellowships, Inc. The citizens who founded the organization pledged themselves to encourage better understanding primarily among leaders in cultural, professional and business circles in this and other countries. Beginning by bringing thirteen foreign leaders to the United States in 1954-55, they hope to bring twenty-five here each year in the future.

Eisenhower Fellows are nominated by committees established in their own countries with the aid of the ambassadors serving between their countries and the United States, and composed of three of their own citizens and two resident Americans. Final selection is made by a committee of trustees of the Eisenhower Exchange Fellowships, Inc. The organization seeks to select men who are leaders, or who have shown strong potentialities for leadership, "in the field of their country's greatest need."

It is one of the program's strengths that it gives much promise of becoming self-supporting, and a Foundation appropriation of \$600,000 is intended to help it develop this potential. The appropriation provides for grants of \$60,000 annually for ten years, on condition that at least \$180,000 is raised each year from other sources.

A second organization with a similar interest is the English-Speaking Union of the United States. Along with its counterpart in Britain, the English-Speaking Union of the Commonwealth, it has for some years supported exchanges of students and scholars between Britain and America. Recently the two organizations have begun to give more attention to purposeful contacts between leaders of opinion as well.

With the assistance of a Foundation grant of \$340,000, the English-Speaking Union of the United States plans, as one phase of its expanded program during the next five years, to bring to this country some 140 British leaders for visits averaging ten weeks. The visitors will include persons in government, labor, business and the arts.

*Eisenhower Fellows come to U.S. from all parts of the world, include Frederick Arkhurst, Gold Coast press officer (top), who surveyed communications media, and economist Yonosuke Goto of Japan (below, with wife), who studied American economic system at firsthand*

*International Activities  
of American Scientists*

American scientists have been taking part in an increasing number and range of international activities in recent years. One indication is the fact that United States delegates to international meetings of specialists in the natural sciences have almost tripled in number since 1950. Total attendance of United States scientists at international meetings is now estimated to exceed one thousand annually.

The United States is represented in most international scientific organizations through the National Academy of Sciences and its associated National Research Council. These two agencies are, in fact, a major means by which American scientists plan and carry out their organized activities. More than three thousand American scientists serve each year on committees, boards and panels of the Academy and Research Council, helping to guide a wide variety of scientific activities, including participation by United States scientists in international programs. It was through a committee of the National Academy of Sciences, for example, that plans have been made for Americans to take part in the International Geophysical Year in 1957-58.

To assist the international activities of the National Academy during the next five years, the Foundation has granted it \$400,000. The grant will facilitate the work of the United States national committees of international scientific organizations. It also will make possible a limited number of visits by American scientists to other countries and visits here by outstanding scientists from abroad.

#### **GRANTS IN EUROPE**

*Study of International Affairs*

The Royal Institute of International Affairs in London is regarded as one of the world's leading centers for the study of international problems.

Founded in 1920, the Institute is both unofficial and nonpolitical. It is best known outside Britain, perhaps, for such publications as the annual *Survey of International Affairs*. But the Institute also is active as a sponsor of research by individual scholars and by study groups in which diverse points of view are represented; as a sponsor of lectures by distinguished foreign visitors to Britain; and as a clearing house of information on international affairs. In matters of mutual interest, the Royal Institute cooperates with the Council on Foreign Relations in New York and with institutes of international affairs in Canada, Australia, New Zealand, South Africa, Pakistan and India. It thus provides an independent, democratic forum which contributes to understanding of international problems in many parts of the world.

A grant of \$400,000 is intended to help the Royal Institute continue this program during the next ten years.

*International Exchange in Europe* A group of distinguished Europeans has established within the past year a European Center for International Exchange, aimed at improving contacts among the people of the European nations.

For the present, the Center plans to concentrate on improving contacts between France and Germany and between northern Europe and Italy, and on undertakings throughout Europe that will deal with teaching methods, the teaching of history, and problems of public administration.

The Foundation has granted \$200,000 to help the sponsors of the Center make a start. An equal sum will be granted as the Center develops financial support from other sources in Europe itself.

*European Comparative Studies* Nuffield College, Oxford University, has recently instituted a program of European political and economic studies, bearing in particular on the problems involved in Europe's political and economic integration. The Foundation has granted \$280,000 to help Nuffield College develop this program during a period of ten years.

*Nuclear Research and Training in Europe* In spite of the setback to European leadership in nuclear physics caused by the Hitler regime and World War II, Europe is playing a leading part in the development of atomic energy for peaceful purposes. The governments of twelve European nations have established in Geneva the European Organization for Nuclear Energy (C.E.R.N.), a regional research institute with its own staff, laboratories and equipment. And the Danish Government and Danish foundations have helped maintain and enlarge the Institute for Theoretical Physics in Copenhagen, where many of those who have paved the way to practical use of nuclear energy were trained under Professor Niels Bohr.

*Nobel Prize-winner Niels Bohr organized Institute for Theoretical Physics in 1920, made it international research center with aid of Danish and American foundations*

During the past year the Foundation granted funds to both these institutions to enable them to expand their international activities. A grant of \$200,000 to the Institute for Theoretical Physics provides primarily for fellowships to help outstanding non-Danish physicists to study and consult there during the next five years. A grant of \$400,000 to the European Organization for Nuclear Energy will enable it, during the next five years, to undertake activities not directly connected with its sponsoring nations, particularly to bring outstanding American nuclear scientists to participate in the development of its research and training programs, and to train young scientists from other countries, including countries in underdeveloped areas.

*Weekly seminar at which scientists discuss their problems and plan cooperative research, is part of Institute effort to harmonize work of theoretical and experimental physicists*

*Israeli physicist describes his research to colleagues at staff meeting. Grant will help Institute serve larger number of foreign scientists in next five years*

**INDONESIA**

The Foundation's first grant outside the United States was made in 1950 to an agricultural institute in India. Since that time, nearly \$60 million has been appropriated for grants and other assistance for a wide variety of activities in thirteen Asian and Near Eastern countries, ranging from Indonesia to Turkey.

Like most activities the Foundation has supported in the United States, those overseas have been essentially educational in character. They also have been directed toward the same range of human problems. The needs of these countries, however, have frequently called for responses otherwise quite different from what the Foundation has done at home.

Some are new nations faced, as the United States was faced in its early years, with political problems that are enough in themselves to absorb the energy and ability of their people. All thirteen are countries more or less "underdeveloped" economically, and they are experiencing a growing popular demand for economic and social improvement. All of them are in need of capital for investment. And all are extremely short of trained people, of schools to train more, and of other institutions, public and private, through which trained men and women can be put at the service of their people.

The Foundation has concentrated its funds on aiding the development of these "human resources." At the outset in almost every country, it has given special attention to rural community development—to self-help and cooperative efforts among villagers as a means of improving their economic conditions, educational opportunities, health and general welfare. It has gone on to aid education designed to increase industrial production, especially among small-scale producers.

At the same time the Foundation has supported scientific research to shed more light on the economic and social problems which governments and other groups are trying to alleviate, and improvements in the administrative machinery which some of these governments inherited from their colonial eras and which is now inadequate to the burdens of independence.

It also has tried to help educators raise the quality of teaching in both technical and nontechnical fields, to parallel the rapid expansion that is taking place in their school systems.

The relative emphasis that has been placed on each of these areas of activity is a reflection, of course, of the needs and desires of each country. There are marked differences among them, and from year to year there have been changes within individual countries. In India, for example, the rural development program which the Foundation financed heavily a few years ago is now almost entirely supported by local funds. India's Second Five Year Plan, which went into effect this year, concentrates its attention on large and small industry, and major Foundation grants of 1955 and

1956 have been for educational programs that will aid this industrial development.

A large portion of Foundation funds in Pakistan also has gone into rural development, and into economic and social research to aid the Government in the preparation of its First Five-Year Plan, the draft of which was made public this year.

Recent grants in the Near East reflect the growing interest of governments of the region in rural community development and rural education; in earlier years, the great majority of grants went to private educational institutions.

In both Burma and Indonesia, the Foundation has tried particularly to help train technical personnel, teachers and administrators, all in extremely short supply in terms of these countries' hopes of developing new sectors of their economies and of expanding educational opportunities. This is necessarily a slow process, and in 1956 the bulk of the grants again went to support these training programs.

## INDIA

### *Village School Teachers*

The state of India's village school teachers has been a subject of concern in many quarters of the country for quite some time. Teachers' salaries average the equivalent of only \$5 per month. And while this has worked a hardship on the teachers and their families, it has worked a greater one on the villages. Deprived of much incentive, many teachers are not con-

*Indian school teacher, here conducting outdoor class, will be trained for broader service as village leader, in turn will get local help to raise income*

tributing as they might, either in the classrooms or outside them, to village welfare.

It has been clear that Government funds would not be adequate to raise the teachers' salaries substantially for some time. And in any case, it has seemed unlikely that the financial side of the problem could be improved radically while other aspects were ignored. Widespread interest, therefore, has been aroused by an approach that would draw on the experience of the community development program. Villagers have provided land, labor and materials to build school buildings; it has been suggested that they now could increase the teachers' real income by providing them with houses, family garden plots and perhaps cash supplements to the salaries they receive from the state governments.

In turn, the teachers could make a greater contribution to the villages. An important aspect of the community development program has been what the Indians term "social education"—citizenship training, adult education in the aims and cooperative methods of community development, recreational and cultural activities, and literacy work among adults. With some preparation, the village school teacher could well act as a "social educator" and thus be of great help to the "multi-purpose" workers who conduct the development program at the village level.

Experiments in various parts of rural India already have indicated that the teacher could fill such a role in his community. The Government has decided, therefore, to launch a large-scale experimental program, and the Foundation has provided partial support for it through a grant of \$800,000. Through training courses for village school teachers and complementary orientation programs for members of village *panchayats*, or councils, selected from areas of intensive community development activity, it is hoped to implant the idea of a new teacher-community relationship. Each village would then work out its own methods. As currently conceived, the program will reach the teachers and leaders of some twenty-five to thirty thousand villages during the next five years. Eventually, the Government hopes to extend the program to all 550,000 villages in India.

*University Education* A University Education Commission concluded a few years ago that a major problem of university education in India has been the isolation of teachers and students from the larger community in which they live. Traditionally the universities have prepared men for government and other "black-coated" (white-collar) jobs. But university students cannot look forward with assurance to such jobs today, and there is a growing body of educated unemployed. Because of this and because of the difficult physical circumstances in which most university students live, there has arisen among them what is now widely known in India as "student indiscipline,"

*Shoemaking, an ancient trade still followed in ancient ways, is one of the industries Indian Government hopes will yield more consumer goods and employment as small manufacturers get technical advice under new program*

characterized by an apathy toward studies (except for cramming for examinations), a susceptibility to political manipulation, and an alienation from the constructive side of modern Indian life. Steps to mitigate this condition, undertaken by the Indian Ministry of Education in concert with several of the country's universities, were supported by Foundation grants in the past year.

One approach has been to give university students and young faculty members an opportunity for personal experience in the community development work that is now going on in villages throughout India. As had been hoped, an experiment in West Bengal in 1955 showed that by actually working in the villages with the trained "multi-purpose" village workers, students came to have a new respect for rural India, a concern for its problems, and a deep interest in the efforts that are being made to solve them. This past year, the Foundation made grants totaling \$300,000 to the Community Projects Administration and the Ministry of Education so the program could be expanded.

#### *Industrial Development*

In 1953 the Foundation helped the Government of India to recruit an international group of advisers to aid it in developing small-scale industry. One of this group's recommendations was the establishment of regional institutes to provide small manufacturing enterprises and state authorities with technical managerial advice. Such institutes subsequently were established with Foundation assistance in New Delhi, Calcutta, Bombay and Madras.

India's Second Five-Year Plan, which went into effect this year, calls for

the creation of 4.5 million additional jobs in small industry, including cottage industry, by the end of 1960. The Plan also envisages that the major share of consumer goods for the Indian people will come from the small industries of the country during the same period. In view of this, expanded and more regular assistance on technical problems to small-scale producers had to be forthcoming.

The Ministry of Commerce and Industry decided to bring to this problem the same technique which has proved so successful in the field of agriculture: a system of extension workers who would carry the technical advice of the four service institutes to the producers in their regions. The Foundation granted \$465,000 for four centers at which the industrial extension workers will be trained and for a special training center for the shoe industry. The grant runs for three years, during which time the Government will assume an increasing proportion of the recurring costs.

*Urban Community Development*

The emphasis in India's new Five Year Plan on heavy industry, which means largely urban industry, has brought a new interest in the problems of urban communities generally. The earlier Plan had emphasized food production and the general improvement of living conditions in rural areas; now the question has been raised as to whether the problems of urban communities might not be attacked in a similarly comprehensive way.

This is an untried activity. The first steps, in the view of the Indian Government officials concerned, are study of one or a few urban areas and careful planning with municipal committees and existing agencies whose support and cooperation will be needed, followed by a pilot or experimental program of limited size. The Foundation has granted \$25,000 to the Government of India for the study and planning that will precede the first experimental program.

**PAKISTAN**

The publication of a draft Five Year Plan for economic and social development was an event of major importance in Pakistan during the past year. This summing-up of Pakistan's human and material resources, and estimate of their potential growth during the next several years, represent two years of research and analysis by a large number of Pakistani officials and specialists, aided by foreign experts provided through Foundation grants.

*Rural Community Development*

The proposed Plan, noting that "about ninety per cent of the country's people live in rural areas, often in poor and primitive conditions," recommends "highest priority" to the Government's Village Agricultural and Industrial Development Program, a program of village self-improvement which, since its inception in 1953, has been limited less by lack of funds

*Pakistanis contribute own labor to build new village sanitary drain under government's rapidly expanding Agricultural and Industrial Development program which now carries self-help theme to 3.5 million people*

than for want of people trained to carry it out.

The key people are the village-level workers—men and women to serve as catalysts to cooperative action in the villages and as liaison with government agencies that have technical and financial resources available for village projects. The Foundation granted funds in 1953 for nine institutes to train these workers. By the fall of 1956 almost one thousand of them were operating in thirty-five “development areas,” each comprising about 100,000 people, located in about 150 villages. The draft Five-Year Plan, however, calls for the opening of 172 development areas by 1960, requiring some five thousand village workers. To make this expansion possible, the capacity of six of the training institutes is being doubled, and two new double-capacity institutes are being established. Funds were made available from the Foundation’s 1953 grant to aid this step-up in the training program.

Also important to the success of the Village AID Program are the administrators at higher levels. Pivotal positions are occupied by the officers who supervise the “development areas” and by supervisors of the agriculture, health, industries and similar departments, many of whom gained their early government experience in the colonial administration. The Government has decided to establish two academies, one each in West and East Pakistan, to implant in these civil servants a stronger tradition of public service and to train them in the concepts and methods of community development.

The Foundation granted \$51,000 to Michigan State University for

advisors to aid the Government in its preliminary planning of these institutes; their recommendations were under consideration by the Government at the close of the period covered by this report. The physical requirements for the buildings already were clear by that time, however, and the Foundation granted a further \$68,000 to enable the Government to employ a foreign architectural firm to plan and design them.

### *Technical Training*

*Student learns gas-welding method at a polytechnic institute, one of two aided by the Foundation in Pakistan*

Technical education facilities have expanded considerably in Pakistan in the ten years since the country's independence. The Foundation itself has provided funds to aid two polytechnic institutes, which are receiving technical assistance from Oklahoma A. & M. College. It has long been clear, however, that formal training could not be provided quickly enough to meet many of the needs of Pakistan's growing industry.

As one means of meeting this situation, the Government established a National Program of Training-Within-Industry, and an institute was set up in Karachi to operate the program under the auspices of the Pakistan Industrial Development Corporation. The Foundation granted funds in 1954 to help the institute become well established, and it made available the services of a training specialist for two years.

Using a "multiplier" system, in which each man trains ten more—a technique developed by the United States Manpower Commission during World War II—the program has met with a response from industry that promises its self-sufficiency in perhaps two more years. The program has been extended to several areas in addition to that surrounding Karachi, and regional offices have been opened in Lahore and Dacca.

In the past year, the Foundation granted a supplement of \$12,000 to support the training abroad of three members of the institute staff and extended the appointment of the adviser to the institute for an additional year.

### **THE NEAR EAST**

It is impossible, as this report is written, to anticipate what impact the fighting which broke out in October, 1956, will have on Foundation-supported activities in the Near East. The year that ended on September 30, which is covered by this report, was already an uneasy period. In Jordan, rioters attacked two projects which the Foundation has supported for several years: the Arab Development Society's vocational school for boys at Jericho, which was seriously damaged; and the village development project of the American Friends Service Committee at Dibbin, which was destroyed. Elsewhere in the area, the Arab-Israeli conflict and the tensions engendered by it distracted some attention from such matters as education

and rural community development. Nevertheless, as the grants described below indicate, there was a significant growth of interest in these matters on the part of Near Eastern governments during the year.

## REGIONAL ACTIVITIES

*Rural Education* In mid-1955 the Foundation conducted a survey in Iraq, Jordan, Lebanon and Syria and found their several Ministries of Education deeply interested in improving their work in rural areas. It was generally recognized that one needed step was the introduction of new curricula in the rural schools. In the past, these schools have tended to follow the patterns set by urban schools, although their students must look forward to lives quite different from those of city people. Also needed were special programs for training teachers for the rural schools, so they could contribute outside the classrooms, as well as within them, to village economic and social development.

To aid the planning of such departures from past practice, the Foundation cooperated with educators and government officials in the area in organizing an Arab Rural Education Survey Commission. It includes representatives of the Ministries of Education of Iraq, Jordan and Syria, the American University of Beirut in Lebanon, and the Department of Social Affairs of the Arab League. By the fall of 1956, the Commission had begun a review of rural education in the Near East and other parts of the world as a basis for recommending objectives and methods for rural education in the Arab countries.

*Higher Education* The American University of Beirut, established as Syrian Protestant College by American missionaries at the end of the American Civil War, has long been one of the leading liberal arts educational institutions in the Near East. For many years, in addition to its school of arts and sciences, it has operated schools of medicine, pharmacy and nursing. In the past decade it has added schools of engineering and public health and, with assistance from the Foundation, a school of agriculture and an institute of economic research.

The University's faculty is now composed of teachers from the United States, Europe, and the Near East itself. Its 3,500 students include men and women of more than fifty nationalities and twenty-four religious groups. Among its graduates are many who occupy prominent positions in government, business and the professions in the Near East.

The Foundation made three grants totaling \$616,380 to the University during 1956. One of these provided emergency funds to help the University meet its general operating expenses during a two-year period. Another will help members of its faculty and staff to do advanced study in the

United States and Europe. The third grant provided funds to help the A.U.B. department of education develop curricula for training teachers for rural schools and for related vocational agricultural education.

A second American-sponsored institution in the Near East, the American University at Cairo, recently began a self-evaluation program to seek ways of maintaining high standards and of shaping its curricula to make the University of the greatest possible value to the country and region which it serves. A Foundation grant of \$64,000 is helping to support advisers from abroad and other services for this program during the next two years.

## **IRAN**

*Rural Village Development* The Foundation has cooperated in rural development in Iran since 1952, most recently by grants for activities conducted directly by the Government of Iran.

The Government's village development program, known as the Block-Land Program, was established in 1955, with two "blocks" of villages. As more all-purpose village workers are trained, the program is to be extended to other areas. A Foundation grant in 1955 was made primarily to help meet the cost of training the first group of one hundred village workers in an intensive course at the Mamazon School at Varamin.

This past year, \$150,000 was granted to the Government as a supplement, so that the program might have the fullest support necessary at this important stage of its development.

*"Cradle" introduced at Near East Foundation's Mamazon School enables Iranian farmer to cut grain twice as quickly as with traditional tools*

## **IRAQ**

### *Rural Village Development*

Oil revenues now totaling more than \$200 million annually are enabling Iraq to carry out the largest physical development program of any country in the Near East. By contrast, rural community development has been promoted only on a small experimental scale—by the Government of Iraq, the United States International Cooperation Administration, and the United Nations Technical Assistance Administration.

In 1955, however, the Ministry of Social Affairs of the Government of Iraq established a Directorate of Rural Development and organized an informal committee of various ministries to bring about an integrated attack on agricultural, health, educational and other problems of rural life. It requested the Foundation's assistance in developing this program on a nationwide basis.

The Foundation granted \$425,000 to the Government for such purposes as the establishment of centers for training village workers and giving them technical support, and improvements in the curricula of schools now training rural teachers, so they could become better sources of village workers.

## **ISRAEL**

### *Scientific Research*

In 1953 the Foundation granted funds to the Israel Foundations Trustees for a scientific research program designed to provide information needed by the people and the Government of Israel in guiding the country's development and making effective use of its human and natural resources.

In the fall of 1955, following a visit to Israel by a member of the Foundation staff in New York, a supplement of \$171,000 was granted for completion of the research program and for experiments to test some of the findings.

The program covers a wide variety of projects in the natural and social sciences, ranging from radio-chemical studies of water sources to analyses of jobs in the civil service commission.

## **JORDAN**

### *Rural Village Development*

When the truce line between Israel and Jordan was drawn, it cut off some one hundred frontier villages in Jordan from much of their normal livelihood. According to the United Nations Relief and Works Agency for Palestine, these villages lost more than half their land, including ninety per cent of their irrigated land. This situation, in a region where seventy-five per cent of the population makes its living from the land, constituted, in the opinion of many observers, one of the major causes of tension along the

Jordan-Israeli border.

In May, 1956, the Foundation granted \$500,000 for a program aimed at improving the economic conditions of these villages and at creating a healthier mental outlook among their 150,000 inhabitants. Administration of the program is in the hands of the Arab Development Society, a non-profit Arab organization, which already has worked to improve rural life in the area around Jericho, where it operates a vocational school for Arab refugee boys.

By starting in a few villages and by using trained workers, the Society hopes to demonstrate how the border area's agricultural, industrial and social life can be improved by combining modest amounts of outside financial aid with cooperation and a will to help themselves on the part of the villagers.

*Education* The urgency in many underdeveloped countries of the popular demand for economic and social improvement is well illustrated by the case of elementary education in Jordan. In the past several years the Government of Jordan has undertaken to create a public school system from the ground up. With Point IV aid it established three teacher-training institutes which now provide some ninety teachers a year. But in the 1955-56 school year the public demand was so great that six hundred teachers were appointed, more than five hundred of whom were without the training provided by the teacher institutes or its equivalent.

The Foundation has for some time carried on discussions with the Jordanian Government as to how it might help resolve this problem. By the end of this report period, \$248,910 had been granted to the Government to aid establishment of a college to train women teachers for rural schools and an experimental center to prepare men for rural teaching posts and for work in the rural programs of Government ministries interested in health, agriculture, welfare and other aspects of rural life.

## **LEBANON**

*Training Rural Teachers* As one step in a program to improve education in the villages of Lebanon, the Lebanese Ministry of Education is establishing a special college to prepare teachers for rural assignments. Most of the initial expenses are being met by the Governments of Lebanon and the United States.

Neither government has been able, however, to provide funds so the college can have the benefit of experience in several other countries, and the Foundation has supplemented their financing with a grant of \$148,000.

The bulk of the grant will be used to give fifteen designated members of the college faculty a year or two of advanced training at three foreign

institutions well known for their work in rural education: the International College for Teacher Education in Denmark, Jordan Hill College in Scotland, and Berea College in Kentucky.

## **SYRIA**

*Rural Education* Like Jordan, Syria is faced with an extremely difficult task in providing even primary education for all its young people, especially in rural areas. There are today only some two thousand schools in Syria's 4,500 villages. If an attempt were made to meet the public's desire for schools, however, many more would have to be opened—and staffed with teachers who had little or no training for their posts.

The Syrian Government has planned five colleges in which to train rural teachers and has budgeted some \$500,000 in local currency for initial expenses. These funds now await formation of a Development Board which will administer Syria's Extraordinary (Development) Budget.

In the early part of 1956, the Foundation granted \$225,000 to the Government of Syria to help it begin at once the establishment of a prototype college, in order to speed the training of critically needed teachers and to help the Government plan the most effective use of the funds that will later become available from the Extraordinary Budget.

*Rural Village Development* Another Foundation grant will help support the beginning of a rural development program in Syria.

The Government has decided to establish the program on an experimental basis in the *Mohafazat* (Province) of Damascus, with the expectation that it will be expanded later to other parts of the nation.

The Foundation granted \$250,000, which will be used primarily for training personnel, for initial planning and the start of cooperative ventures and other operations that will lead to province-wide or country-wide programs, and for some technical support. This will supplement funds from local sources through the next three years.

## **TURKEY**

*Secondary Education* During the past several years a growing number of Turkish officials and teachers has become interested in modernizing Turkey's public secondary schools, and the Foundation has made a series of grants to help them explore ways of doing so.

A consultant on secondary education has been serving with the Ministry of Education, and twenty-five teachers have spent a year studying at the University of Illinois and observing American secondary school practices.

Three experimental secondary schools already have been established to demonstrate new curricula and methods.

These ventures have been successful enough for the Ministry to decide to extend the experimental program to the higher secondary schools, and this past year the Foundation granted \$130,000 to assist the new effort. The grant will finance fellowships permitting nine persons in important positions in the Turkish school system to take advanced training in various American universities. It also will support the services of the consultant to the Ministry for another year.

## **BURMA**

*Agricultural Training* Agriculture has been and will likely continue to be for some time the most important sector of the Burmese economy. It employs seventy per cent of the population, produces forty per cent of the national income, and is the nation's greatest source of foreign exchange. Nevertheless, it is recognized that production can be increased still further and, at the same time, diversified to relieve the country's substantial dependence on the export of a single crop—rice.

As one means of achieving these objectives, the Government of Burma has acted to improve agricultural education at various levels. In 1954 it

*“Learn-by-doing” philosophy of Burma’s Agricultural Institute sends students into nearby villages to learn farmers’ problems, demonstrate new methods, give children pointers in working school garden*

opened an Agricultural Institute at Pynmana, where before World War II an agricultural school operated by the American Baptist Mission had pioneered in vocational training in agriculture for village youth. The new Institute, with a Burmese staff, was intended to train agricultural extension workers and teachers of vocational agriculture for high schools. To aid its early development, the Foundation granted funds for American advisers to the staff, for training of staff members abroad and for some needed equipment. Since that time, the Institute has graduated its first class and made numerous improvements in its training program, including the beginning of extension work among surrounding villages.

Further improvements need to be made, however, before the school is able to provide a training program with the quality and scope required. An additional Foundation grant of \$187,000 was made this past year for expansion of the Institute's facilities and for further training and expansion of its staff. Other funds were set aside to continue the services of American advisers working with the Institute's principal and faculty. This assistance will extend to 1959.

#### *Technical Training*

While Burma relies heavily on agriculture to support its population, it hopes to have a more balanced economy in the future and is devoting a large share of its public capital investment to transport, communications, power and industry. At the same time, it is attempting to increase its supply of technicians so that effective use can be made of this investment.

The demand for technical personnel is already great. It is estimated, for example, that public enterprises alone could use ten times the number of sub-engineers, draftsmen, surveyors and the like now being trained at the Government Technical Institute at Insein. Advisers from the William Hood Dunwoody Industrial Institute of Minneapolis, provided through a 1954 Foundation grant, have been aiding the Institute at Insein in an improvement and expansion program.

The Government Technical Institute is not only training men for industry, however; it also is expected to be a major source of teachers for technical high schools, the first of which was established in the past year. Provided with an excellent physical plant, modern equipment and a prominent location in Burma's capital, the Rangoon Technical High School attests to the importance the Government attaches to technical education, which has not enjoyed the status of academic training in the past.

Because the school will set standards for the other technical high schools planned for the future, the Ministry of Education requested Foundation aid in obtaining the advice of experienced vocational educators, and some teaching equipment, from abroad. A grant of \$385,700 was made for these purposes; Dunwoody Institute again provides the technical assistance.

*Trained to use an engineer's level, student checks construction job at Insein, Burma, where a government institute prepares skilled manpower for nation's expanding industry*

*Public Administration* Burma's Ministry of Industry illustrates sharply the change that independence has brought in the goals and functions of government in many former colonial territories. This Ministry is financing and managing major industrial enterprises, a function entirely new to government in Burma. And the administrative machinery inherited from the colonial era has proved inadequate to the new tasks laid upon it.

In 1955, at the Government's request and supported by a Foundation grant, specialists provided by Public Administration Service of Chicago made a study of management accounting practices in the Ministry of Industry and some of the larger public enterprises. As a result, the Government asked P.A.S. to train personnel in a few public and semi-public enterprises in new systems and methods to demonstrate what they could do to aid policy making, management and control.

The Foundation granted \$360,000 to enable the Government to retain P.A.S. during the next four years. It was planned to begin with one enterprise in a priority field, such as industry, power, agricultural marketing, transport or mining. Demonstrations in other priority fields will follow.

*Business Administration* The serious need in Burma for trained administrators, in industry as well as in government, prompted the University of Rangoon in 1954 to begin a program in business and industrial management. Late that year the first of two management specialists employed by the Foundation arrived to work with the University's Department of Economics, Commerce and Statistics in developing the new program.

Since then a separate Department of Commerce has been created, new "majors" have been established in management and accounting, and general courses in these fields are now required of all candidates for degrees in commerce and advanced degrees in engineering.

By late 1955 the program was thus well begun, and the University, esti-

mating the need for administrators to be still greater than it had appeared the year before, decided to expand the Department of Commerce faculty by one-third. It needed further professional assistance from abroad, however, in going into new avenues of instruction and research. The University of Utah agreed to provide this assistance, and the Foundation granted \$216,000 to finance it for two and one-half years.

## INDONESIA

*Training of Teachers* The need for trained people is at least as great in Indonesia as in any other country that has achieved national independence in recent years. Before World War II, in the last years of Dutch rule, only 1,700 Indonesian men and women, out of a total population at that time of sixty-five million persons, were studying at the university level. When independence came, there were not only few people trained for work that would further the nation's economic and social development, but few even to teach the many others who sought to learn.

Education, however, was one of the advantages the Indonesian people looked for in independence. Their provisional constitution stated it clearly: "Each citizen is entitled to education." And in response to a great public demand, the education system was expanded considerably in a few years' time. The number of young people in secondary schools reached fourteen times the 1940 figure by 1955. And the number in universities reached nineteen thousand the same year.

This expansion was accomplished, of course, only by the appointment to teaching posts of many persons with little or no special preparation, and in-service training was widely adopted to raise teaching standards. In 1954, however, four teacher-training colleges were established to place the profession on a sounder basis, and in the past year the Foundation made two grants to assist these institutions.

One grant of \$97,110 provided for two-year fellowships in the United States for five persons who will later become permanent members of the teacher college faculties. The second provided \$40,000 to enable the deans of three of the colleges to survey teacher-training institutions in the United States and in several countries of Asia and Europe.

*English-Language Training* The rapid expansion of Indonesian education has taken place at the same time as a change in the language of instruction. After achieving independence, the Government chose English to replace Dutch as Indonesia's "first foreign language." This meant that English not only was to be taught in the schools but, in the absence of adequate books in Indonesian, was to be used for teaching many other subjects, especially in the universities.

In its efforts to prepare students to use English, the Government of Indonesia has had, since late in 1952, the cooperation of the Foundation and the Institute of International Education. American teachers, recruited by the Institute and supported by Foundation grants, first carried out intensive training courses for the majority of Indonesia's two thousand practicing teachers of English. More recently, they have acted as instructors in residential teacher-training schools offering two-year courses for high school graduates.

The Indonesian Ministry of Education estimates that the country needs some ten thousand teachers of English, and ways have yet to be found to train so large a number. Some are being prepared through new short courses, however, and the two-year residential schools are turning out each year about seventy-five more whose high quality is expected to have an important influence on the teaching of English generally.

In the past year an additional \$605,000 was granted to the Ministry of Education to continue the services of American teachers in these schools until mid-1958. The grant also includes funds to enable two dozen Indonesian teachers to study abroad for B.A. and M.A. degrees in English and English-language training. On their return, they will be expected to succeed the American staff of the special schools and also become members of the faculties of universities and standard teacher-training institutions.

#### *Training Technical Teachers*

Indonesia's first institute for the training of teachers for technical schools has become in a few years what many consider a model institution. The Foundation has contributed to its development since 1953, primarily through the provision of advisers from the Dunwoody Institute, already mentioned in connection with technical education in Burma.

Because the institute is new to Indonesia, however, more time has been needed than was originally estimated to fit it into the country's system of education. The institute was first seen as offering a one-year program, but it became clear that to give technical education the status it needs to attract good students and good teachers, a longer period of training would be necessary. The training period has, therefore, been lengthened to four years. And early in October, 1955, the Foundation granted \$296,610 so the Dunwoody team of advisers could remain through the 1956-57 academic year to help the institute establish the longer program. This was later supplemented by a \$20,000 grant for the training in the United States of six recent institute graduates, to equip them to replace the teachers now on loan from Dunwoody.

By the fall of 1956 the work of the institute, located at Bandung, was beginning to make itself felt elsewhere. A second institute had been established in Djakarta and, for want of teachers with more advanced training,

*Automobile engine is tested by future Indonesian technician under eye of Allan Johnson, member of technical team on loan from Dunwoody Institute*

some graduates of the Bandung class of 1955 were teaching there. Four other institutes were getting under way in other localities, staffed in part by Bandung graduates and using a curriculum prepared cooperatively by Indonesian and American members of the Bandung staff.

*Higher Education*

Two other grants were made in Indonesia during 1956 to aid higher education at points of special need.

A grant of \$134,000 provided for the advanced training of members of the staff of the Ministry of Agriculture research center at the Botanical Gardens in Bogor. This center has had a world-wide reputation for its basic agricultural studies. The grant will make it possible for staff members to go abroad for training not available in Indonesia, as a means of maintaining the Garden's contribution to fundamental agricultural knowledge and to agricultural production in Indonesia.

A grant of \$16,667 will aid a graduate school of public and business administration which a private organization, the Ikatan Bachelors of Business Administration, has established in Djakarta. The school offers night courses, largely in economics and business administration. With the help of the Foundation's grant, courses will be added in public administration, particularly public finance and budgeting.

*Rural Development* As a first step toward establishing a community development program, the Government of Indonesia appointed a commission, representing interested Government ministries, to study programs already operating in India, Pakistan and Burma. The official commission did not, however, include any women. And because community development programs have been found to be neither complete nor successful unless they included efforts to improve conditions affecting women, and unless the active cooperation of women was enlisted, it appeared desirable to enable representatives of Indonesian women's organizations to make a study similar to that of the Government commission. The Foundation granted \$25,000 to the Government to make such a study possible.

# OTHER GRANTS

Each year the Foundation makes a small number of grants for purposes that fall outside its primary spheres of interest. Some of these fulfill the Foundation's community obligations and derive from its earlier years when activities were confined largely to the state of Michigan. Grants in recent years have supported such Detroit institutions as the Henry Ford Hospital, the Symphony Orchestra, and the United Foundation Torch Drive.

Others have been made in appreciation of outstanding services to the Foundation by individuals. Memorials to trustees have included grants to the New York Public Library to furnish a research room in tribute to Frederick Lewis Allen, and to the College of Wooster to furnish the Otelia Augspurger Compton Dormitory in honor of Karl T. Compton. A gift was made to the Helen Hay Whitney Foundation in New York City for the T. Duckett Jones Memorial Fund, in recognition of Dr. Jones' contribution as a member of the Study Committee which in 1950 outlined the structure of the Foundation's current program. Another went to Johns Hopkins University in honor of Devereux C. Josephs, Chairman of the Board of the New York Life Insurance Company, for his services as head of the advisory committee which assisted the Foundation in the formulation of its program to raise the salaries of private college faculties.

*New steeple is hoisted atop Boston's Old North Church as result of response to appeals for aid, including Foundation grant, to preserve Paul Revere landmark*

In special situations, grants sometimes are made for the preservation of American historical relics, an interest pursued by the late Henry Ford. Typical of these was a grant to restore and repair the Old North Church in Boston after its steeple was felled by a hurricane in August, 1954.

During this fiscal year, the Foundation made thirteen such grants totaling nearly \$1.5 million, and an appropriation of \$500,000 for restoration of the historic Wayside Inn at South Sudbury, Massachusetts, which was destroyed by fire in December, 1955.

*Seventeenth-century Wayside Inn, shown after disastrous 1955 fire, will be restored as hostelry made famous by poet Henry Wadsworth Longfellow*

# FELLOWSHIPS

**FOREIGN AREA TRAINING FELLOWSHIPS**

**INTERNATIONAL RELATIONS TRAINING FELLOWSHIPS**

**BEHAVIORAL SCIENCES GRANTS-IN-AID**

**ECONOMIC DEVELOPMENT AND BUSINESS ADMINISTRATION FELLOWSHIPS**

# FOREIGN AREA TRAINING FELLOWSHIPS

Following are the 137 recipients of Foreign Area Training Fellowships awarded by The Ford Foundation during fiscal 1956. Below the name of each Fellowship recipient are his place of permanent residence, position at the time of application, academic field, subject of study, place of study, and the length of time covered by the award.

Financial statements are on page 179.

## ASIA AND THE NEAR EAST

### **JAMES C. ABEGGLEN**

*Chicago, Ill. Sociology.*

Social organization of a factory in Japan. Tokyo and Kansai area, Japan. Six months additional to present Fellowship.

### **CHARLES J. ADAMS**

*Houston, Tex. Religion and Philosophy.*

Higher education in Pakistan. Pakistan. Six months additional to present Fellowship.

### **ROBERT C. ALBERTS**

*Beloit, Wis. Graduate student, University of Wisconsin. Anthropology.*

An agricultural community in Iran. Iran. One year.

### **ROBERT P. AUSTERLITZ**

*New York, N. Y. Linguistics.*

Study of Gilyak language and culture. Hokkaido, Japan. Four months additional to present Fellowship.

### **JACKSON H. BAILEY**

*Belmont, Mass. Graduate student, Harvard University. History.*

Japanese language and modern Japanese history. Harvard University. Ten months.

### **GEORGE M. BECKMANN**

*Lawrence, Kan. Associate Professor, University of Kansas. History.*

Survey of current conditions in Japan and Southeast Asia. Six months.

### **GERALD D. BERREMAN**

*Eugene, Ore. Graduate student, Cornell University. Anthropology.*

Hindi language and South Asian area studies. Cornell University. One year.

### **ROBERT C. BONE, JR.**

*Indian Rocks Beach, Fla. Government.*

Study of Irian Barat (Western New Guinea). Cornell University. Six months additional to present Fellowship.

### **JAMES M. BROWN**

*Salt Lake City, Utah. Linguistics.*

Analysis of Bangkok Thai grammar. Thailand. Ten months additional to present Fellowship.

### **SIDNEY D. BROWN**

*Stillwater, Okla. Assistant Professor, Oklahoma A. & M. College. History.*

The Meiji oligarchy in Japan. Tokyo, Japan. One year.

**ROBBINS BURLING**

*Trumansburg, N. Y. Anthropology.*  
Study of two Garo villages. Assam, India. Six months additional to present Fellowship.

**RICHARD L. CHAMBERS**

*Brundidge, Ala. Graduate student, Princeton University. History.*  
Near Eastern languages and history. Princeton University. One year additional to present Fellowship.

**JAMES B. CROWLEY**

*Hartford, Conn. Graduate student, University of Michigan. History.*  
Japanese language and modern Japanese history. University of Michigan and Library of Congress. One year.

**SCOTT R. deKINS**

*Palo Alto, Calif. Graduate student, Stanford University. History.*  
Intellectual history of China. Stanford University. One year additional to present Fellowship.

**MARTIN B. DICKSON**

*New York, N. Y. Graduate student, University of Tehran. History.*  
Central Asian history and languages. Iran. One year.

**JOHN D. DONOGHUE**

*Notre Dame, Ind. Instructor, University of Notre Dame. Anthropology.*  
Japanese language studies. Harvard University. One year.

**WILLIAM F. DORRILL**

*Killeen, Tex. Graduate student, Harvard University. Government.*  
Chinese language and East Asian studies. Harvard University. One year.

**JOSEPH W. ELDER**

*Dayton, Ohio. Graduate student, Harvard University. Sociology.*  
Industrialization in Hindu society. India. Fourteen months additional to present Fellowship.

**JOHN P. EMERSON**

*Lapeer, Mich. Graduate student, Harvard University. Economics.*  
Japanese colonial history. Japan and Taiwan. One year additional to present Fellowship.

**JAMES T. FORCE**

*Chicago, Ill. Graduate student, Columbia University. History.*  
East Asian regional studies with emphasis on Japan. Columbia University. One year additional to present Fellowship.

**BERNARD GALLIN**

*Ithaca, N. Y. Graduate student, Cornell University. Anthropology.*  
The family system in a Chinese-Formosan village. Taiwan. Fifteen months.

**RAYMOND D. GASTIL**

*Alpine, Calif. Graduate student, Harvard University. Area studies.*  
Cultural change and stability in Fars Province, Iran. Harvard University and Iran. One year.

**JOSEPHINE A. GILLETTE**

*Washington, D. C. Linguistics.*  
Social dialects in Bangkok speech. Thailand. Five months additional to present Fellowship.

**JEROME B. GRIEDER**

*Bozeman, Mont. Graduate student, Harvard University. History.*  
Far Eastern studies, with emphasis on Chinese language and history. Harvard University. One year additional to present Fellowship.

**GEORGE E. GRUEN**

*New York, N. Y. Graduate student, Columbia University. Political science.*  
Political science and Near Eastern regional studies with emphasis on Turkey. Columbia University. One year additional to present Fellowship.

**WERNER HASENBERG**

*New York, N. Y. Graduate student, Yale University. Economics.*  
Economic development of Indonesia. Yale University. One year.

**WILLARD J. HERTZ**

*Minneapolis, Minn. Special student, Harvard University and Massachusetts Institute of Technology. Economics.*  
Study of economic development problems in India and Pakistan. India and

Pakistan. Nine months additional to present Fellowship.

**MANTLE L. HOOD**

*Los Angeles, Calif. Assistant Professor, University of California (Los Angeles). Musicology.*  
Javanese music. Indonesia. One year.

**KENNETH K. INADA**

*Honolulu, Hawaii. Graduate student, University of Tokyo. Philosophy.*  
Buddhist philosophy. University of Tokyo, Japan. One year.

**JASPER C. INGERSOLL**

*Schenectady, N. Y. Head of Research and Library Section, Thailand UNESCO Fundamental Education Center, Ubon, Thailand. Anthropology.*  
Southeast Asian studies. Cornell University. One year.

**JOHN W. ISRAEL**

*Woodmere, N. Y. Graduate student, Harvard University. History.*  
East Asian regional studies. Harvard University. One year.

**NORMAN ITZKOWITZ**

*New York, N. Y. Graduate student, Princeton University. History.*  
18th century Ottoman history. Turkey and Western Europe. Fifteen months additional to present Fellowship.

**F. TOMASSON JANNUZI**

*Nutley, N. J. Graduate student, University of London. Economics.*  
Land distribution policies in India. India. One year additional to present Fellowship.

**HAROLD L. KAHN**

*Poughkeepsie, N. Y. Graduate student, Harvard University. History.*  
Far Eastern languages and history, with emphasis on China. Harvard University. One year additional to present Fellowship.

**ROBERTA KAHN**

*New York, N. Y. Graduate student, University of Pennsylvania. Philosophy.*  
South Asian studies with emphasis on Indian religion and philosophy. University of Pennsylvania. One year.

**SIDNEY M. KAPLAN**

*Worthington, Ohio. Assistant Professor, Ohio State University. Art.*  
Art and archaeology in India, Pakistan and Afghanistan. India, Pakistan and Afghanistan. One year.

**GEORGE W. KENT**

*Los Angeles, Calif. Graduate student, Claremont Graduate School. Philosophy.*  
Modern Chinese philosophy. University of California (Berkeley). One year.

**ARNOLD KOSLOW**

*New York, N. Y. Graduate student, Columbia University. Philosophy.*  
Philosophy and history of Chinese mathematical thought. Columbia University. One year additional to present Fellowship.

**RICHARD J. KOZICKI**

*Philadelphia, Pa. Graduate student, University of Pennsylvania. International relations.*  
South Asian studies. University of Pennsylvania and Library of Congress. One year.

**GEORGIA B. LEVY**

*Prairie View, Tex. Assistant Professor, Prairie View A. & M. College. Political science.*  
South Asian area studies with emphasis on India. University of California, (Berkeley). One year.

**FRANCIS X. LYNCH**

*New York, N. Y. Graduate student, University of Chicago. Anthropology.*  
Social organization and religion in the Bikol region of Luzon. The Philippines. Fifteen months.

**JEAN A. MacLEOD**

*Erie, Pa. Graduate student, Harvard University. Area studies.*  
Near Eastern regional studies. Harvard University. One year additional to present Fellowship.

**WILLIAM P. MALM**

*Los Angeles, Calif. Graduate student, University of California (Los Angeles). Musicology.*  
Music and urban culture in Japan.

Tokyo, Japan. One year additional to present Fellowship.

**ROBERT M. MARSH**

*Chelsea, Mass. Graduate student, Columbia University. Sociology.*  
Chinese language and history. Harvard and Columbia Universities. One year.

**BENJAMIN MARTIN**

*Milwaukee, Wis. International representative, International Union of Electrical, Radio and Machine Workers, C. I. O. Labor relations.*  
Far Eastern studies and Japanese language. University of California (Berkeley). One year.

**MARLENE J. MAYO**

*Detroit, Mich. Graduate student, Columbia University. History.*  
East Asian regional studies with emphasis on Japan. Columbia University. One year additional to present Fellowship.

**MELVIN MEDNICK**

*Philadelphia, Pa. Teaching fellow, University of Oregon. Anthropology.*  
A study of Moro-Christian relations in the Philippines. The Philippines. Three months.

**MARVIN W. MIKESSELL**

*Los Angeles, Calif. Geography.*  
Cultural geography. Spanish Morocco, French Morocco and French West Africa. Five months additional to present Fellowship.

**DANIEL E. MOORE**

*Berkeley, Calif. Chief Provincial Public Affairs Officer, United States Information Service, Bangkok, Thailand. Area studies.*  
East Asian studies. University of California (Berkeley). One year.

**FRANK J. MOORE**

*San Francisco, Calif. Research associate, Cornell University. Economics.*  
Land tenure systems in a Nepalese village. England and Nepal. Fifteen months.

**MORRIS D. MORRIS**

*Seattle, Wash. Assistant Professor, University of Washington. Economics.*  
Economic history of the Indian sub-continent. India and Pakistan. Fifteen months.

**PIERRE OBERLING**

*Putney, Vt. Graduate student, Columbia University. Public law and government.*  
Peoples and languages of Southern Iran. Iran. One year.

**MARTIN ORANS**

*Chicago, Ill. Graduate student, University of Chicago. Anthropology.*  
Cultural effects of Indian industrialization. India. One year.

**GLENN D. PAIGE**

*East Rochester, N. H. Graduate student, Harvard University. Political science.*  
East Asian regional studies with emphasis on Korea. Harvard University. One year.

**DWIGHT H. PERKINS, II**

*Evanston, Ill. Student, Cornell University. Economics.*  
East Asian regional studies, with emphasis on economics. Harvard University. One year. (Postponed for military service.)

**GENE B. PETERSEN**

*Boise, Idaho. Graduate student, Columbia University. Sociology.*  
Changes in urban Egyptian family life. United States and Egypt. One year.

**KAREN (MRS. GENE B.) PETERSEN**

*Boise, Idaho. Graduate student, Columbia University. Sociology.*  
Changes in urban Egyptian family life. United States and Egypt. One year.

**DAVID E. PFANNER**

*New York, N. Y. Special student, University of Rangoon, Rangoon-Hopkins Center for Southeast Asian Studies. Sociology.*  
Southeast Asian regional studies. Cornell University. One year.

**MARTIN POLSTEIN**

*New York, N. Y. Graduate student, Columbia University. History.*  
History of the Karamanids. Columbia University and Turkey. One year.

**KLAUS H. PRINGSHEIM**

*Los Angeles, Calif. Student, University of California (Los Angeles). Political science.*  
East Asian regional studies. Columbia University. One year.

**HARRY J. PSOMIADES**

*Roxbury, Mass. Graduate student, Columbia University. Political science.*  
Study of Turko-Greek relations. Columbia University, England, Turkey and Greece. Eighteen months additional to present Fellowship.

**MALCOLM N. QUINT**

*New Preston, Conn. Graduate student, School of Advanced International Studies, Johns Hopkins University. Communications.*  
Study of an Iraqi village. Iraq. One year.

**ANN B. RASMUSSEN**

*Aberdeen, Md. Graduate student, Columbia University. Economics.*  
Manchurian economic development. Japan. Thirteen months additional to present Fellowship.

**JAMES R. ROACH**

*Austin, Tex. Associate Professor, University of Texas. Government.*  
Political institutions of the Indian sub-continent. India and Pakistan. Fourteen months.

**CONRAD ROGER**

*San Mateo, Calif. Graduate student, Harvard University. History.*  
East Asian studies with emphasis on Japan. Harvard University. One year additional to present Fellowship.

**LEO E. ROSE**

*Berkeley, Calif. Graduate student, University of California (Berkeley). Political science.*  
History of Nepal. England, India and Nepal. One year.

**LLOYD I. RUDOLPH**

*Cambridge, Mass. Graduate student, Harvard University. Political science.*  
Political institutions in two Indian states. India. One year.

**SUSANNE (MRS. LLOYD I.) RUDOLPH**

*Cambridge, Mass. Political science.*  
Political institutions in two Indian states. India. One year.

**STANFORD J. SHAW**

*Houston, Tex. History.*  
Structure of government in modern Egypt. Egypt and Turkey. Ten months additional to present Fellowship.

**JAMES E. SHERIDAN**

*Alameda, Calif. Graduate student, University of California, Berkeley. History.*  
Chinese language and history. University of California (Berkeley). One year.

**JAMES R. SHUSTER**

*Philadelphia, Pa. Student, Haverford College. Sociology.*  
Near Eastern studies with emphasis on North Africa. Princeton University. One year.

**PHILIP SIEGELMAN**

*Minneapolis, Minn. Instructor and research fellow, University of Minnesota. Political science.*  
East Asian studies with emphasis on Chinese language and cultural history. Harvard University. One year.

**JOHN M. SMITH, JR.**

*Northampton, Mass. Graduate student, Columbia University. History.*  
Near Eastern history. Columbia University. One year.

**BURTON STEIN**

*Chicago, Ill. Instructor, University of Indiana. History.*  
The rural development program of Ceylon. Ceylon, India and Pakistan. Fifteen months.

**PHILIP H. STODDARD**

*Princeton, N. J. History.*  
Ottoman history. Turkey. One year additional to present Fellowship.

**JOHN O. SUTTER**

*Overland, Mo. Graduate student, Cornell University. Political science.*  
Indonesian economic policy. Cornell University and research libraries in the U. S. One year additional to present Fellowship.

**JOSEPH S. SZYLIOVICZ**

*Aurora, Colo. Graduate student, Columbia University. Sociology.*  
Life in a Turkish village. Turkey. One year additional to present Fellowship.

**JOHN L. THOMPSON**

*Rockville Centre, N. Y. Graduate student, University of Pennsylvania. Sociology.*  
South Asian regional studies with emphasis on India. University of Pennsylvania. One year.

**MELVIN W. WACHS**

*Groton, N. Y. Graduate student, Cornell University. Government.*  
Public administration in Thailand. Thailand. Fifteen months.

**GEORGE H. WEIGHTMAN**

*Union City, N. J. Assistant Professor, University of the Philippines. Sociology.*  
Study of a Philippine Chinese community. The Philippines. One year.

**EDGAR B. WICKBERG**

*Oklahoma City, Okla. Graduate student, University of California (Berkeley). History.*  
Chinese migration to the Philippines. University of California (Berkeley). One year.

**DAVID A. WILSON**

*Ithaca, N. Y. Graduate student, Cornell University. Government.*  
Political institutions in Thailand. Thailand. One year.

**ARTHUR P. WOLF**

*Ithaca, N. Y. Graduate student, Cornell University. Anthropology.*  
Anthropology and Chinese studies. Stanford University. One year.

**GERTRUDE M. WOODRUFF**

*Philadelphia, Pa. Anthropology.*  
Urban social structure in Bangalore, India. Six months additional to present Fellowship.

**DAVID O. D. WURFEL**

*La Mesa, Calif. Political science.*  
Political problems of reform in the

Philippines. The Philippines. Three months additional to present Fellowship.

**TURRELL V. WYLIE**

*Durango, Colo. Language and literature.*  
Tibetan language, history and religion.

Italy. One year additional to present Fellowship.

**MARTIE W. YOUNG**

*Cleveland, Ohio. Graduate student, Harvard University. Art.*  
History and principles of Oriental art. Harvard University. One year additional to present Fellowship.

## SOVIET UNION AND EASTERN EUROPE

**EDWARD A. ALLWORTH**

*New York, N. Y. Graduate student, Columbia University. Language and literature.*  
Uzbek culture under Soviet Russian influence. Western Europe, Turkey, Columbia University. One year additional to present Fellowship.

**WALTER W. ARNDT**

*Guilford College, N. C.*  
*Assistant Professor, Guilford College. Linguistics.*  
Russian and East European studies. Harvard University. One year.

**JEREMY R. AZRAEL**

*Baltimore, Md. Student, Harvard University. Political science.*  
Russian regional studies. Harvard University. Nine months.

**ALLEN B. BALLARD, JR.**

*Philadelphia, Pa. Graduate student, Harvard University. Political science.*  
Russian regional studies. Harvard University. One year.

**SEYMOUR BECKER**

*Rochester, N. Y. Student, Williams College. International relations.*  
Russian language and area studies, with emphasis on international relations. Harvard University. One year.

**ROBERT L. BELKNAP**

*New York, N. Y. Graduate student, Columbia University. Literature.*  
Russian area studies. Columbia University. One year additional to present Fellowship.

**GEORGE A. BRINKLEY, JR.**

*Wilson, N. C. Graduate student, Columbia University. International relations.*  
International relations, with emphasis on Russian relations with Western Europe. Columbia University. One year additional to present Fellowship.

**STEPHAN CHEMYTSCH**

*Eugene, Ore. Student, University of Oregon. Political science.*

Russian and East European studies. Columbia University. One year.

**WALTER C. CLEMENS**

*Cincinnati, Ohio. Graduate student, Columbia University. International relations.*  
Russian language and area studies. Columbia University. One year additional to present Fellowship.

**JAMES M. EALUM**

*Norman, Okla. Graduate student, Harvard University. History.*  
Russian regional studies. Harvard University. One year additional to present Fellowship.

**ROLAND J. FUCHS**

*Tivoli, N. Y. Graduate student, Clark University. Geography.*  
Russian language and area studies. Columbia University. Nine months.

**ALAN P. GARTNER**

*New York, N. Y. Student, Antioch College, History.*  
Russian regional studies. Harvard University. Nine months.

**RICHARD GREENBAUM**

*New York, N. Y. Graduate student, Harvard University. Sociology.*

Sociology, with emphasis on the Soviet Union. Harvard University. Nine months additional to present Fellowship.

**RICHARD A. GREGG**

*Big Sur, Calif. Graduate student, Columbia University. Literature.*

19th century Russian poet Tiutchev. Columbia University. One year.

**JAN HAJDA**

*Chicago, Ill. Graduate student, University of Chicago. Sociology.*

Class structure of contemporary Czechoslovak society. University of Chicago and research libraries in the United States. Nine months.

**DARRELL P. HAMMER**

*Wichita, Kan. Graduate student, Columbia University. Public law and government.*

Russian pre-revolutionary movement for legal reform. Columbia University. One year additional to present Fellowship.

**SIDNEY HEITMAN**

*Spring Valley, N. Y. Assistant Professor, Colorado A&M College. History.*

Political philosophy of Nikolai Bukharin. Columbia University. One year.

**JOSEPH J. HODORAWIS**

*Simpson, Pa. Student, Pennsylvania State University. Political science.*

Russian language and area studies. Columbia University. One year.

**CHARLES H. HOLBROW**

*South Lincoln, Mass. Graduate student, Columbia University. History.*

Russian area studies. Columbia University. Nine months.

**JOSEPHINE A. HOPKINS**

*Pittsburgh, Pa. Student, Smith College. History.*

Russian language and area studies. Harvard University. One year.

**JACOB B. HOPTNER**

*New York, N. Y. Graduate student, Columbia University. History.*

Yugoslavia in crisis, 1938-1941. Columbia University. One year.

**JIRINA M. HRAZDILOVA**

*Philadelphia, Pa. Graduate student, Columbia University. Public law and government.*

Soviet interpretation of international law. Columbia University, Harvard University Library and Library of Congress. Ten months.

**MICHAEL JAWORSKYJ**

*Baltimore, Md. Graduate student, Johns Hopkins University. Political science.*

Soviet critique of Western legal philosophy. Johns Hopkins University and research libraries in New York, Massachusetts and Washington, D. C. One year.

**RICHARD W. JUDY**

*Montrose, Kan. Graduate student, Columbia University. Economics.*

Russian area studies. Harvard University. One year.

**JERZY KARCZ**

*New York, N. Y. Graduate student, Columbia University. Economics.*

Soviet agricultural economics. Libraries in the United States. One year additional to present Fellowship.

**LEONARD J. KIRSCH**

*Pittsburgh, Pa. Student, University of Pittsburgh. Economics.*

Russian area studies. Harvard University. Nine months.

**LESLIE LASZLO**

*New York, N. Y. Graduate student, Columbia University. Government.*

Relations of Church and State in Hungary since 1918. Research libraries in Western Europe. One year.

**MARGARET MOORE LEVCHENKO**

*New York, N. Y. Graduate student, Columbia University. International relations.*

Russian and East European studies. Columbia University. One year.

**CAROL SOLOMON LEVINE**

*Olean, N. Y. Student, Cornell University. Government.*

Russian area studies. Columbia University. Nine months.

**MARIAN A. LOW**

*Cambridge, Mass. Graduate student, Radcliffe College. History.*

Hungarian land reform movements. Radcliffe College. One year additional to present Fellowship.

**DONALD M. LOWE**

*Berkeley, Calif. Graduate student, University of California (Berkeley). History.*

The Chinese revolution as a problem in communist thought, 1920's and 1930's. University of California Library and Hoover Institute. One year additional to present Fellowship.

**PAUL E. LYDOLPH**

*Los Angeles, Calif. Assistant Professor, Los Angeles State College. Geography.*

Russian area studies. University of California (Berkeley). Fifteen months.

**VLADIMIR MARKOV**

*Monterey, Calif. Phase Supervisor, Army Language School, Monterey. Literature.*

Khlebnikov and Russian futurism. University of California, Berkeley. One year.

**ROBERT McNEAL**

*Princeton, N. J. Instructor, Princeton University. History.*

Stalin on the question of nationality. Libraries in the United States. One year.

**EDWIN B. MORRELL**

*Salt Lake City, Utah. Student, Brigham Young University. International relations.*

Russian area studies. Harvard University. Nine months.

**RICHARD B. MYER**

*Staten Island, N. Y. Graduate student, Columbia University. Public law and government.*

Russian area studies. Columbia University. Nine months additional to present Fellowship.

**EGON NEUBERGER**

*Somerville, Mass. Graduate student, Harvard University. Economics.*

Yugoslav economics. Harvard University and libraries in the United States. One year additional to present Fellowship.

**IVAN PLUHAR**

*Cambridge, Mass. Graduate student, Harvard University. Government.*

Russian regional studies. Harvard University. Four months additional to present Fellowship.

**GEORGE F. PUTNAM**

*Cambridge, Mass. Graduate student, Harvard University. History.*

Russian intellectual history. Harvard University. Three months additional to present Fellowship.

**JOHN H. QAULEY**

*New Milford, N. J. Student, Fordham University. Language and literature.*

Russian regional studies with emphasis on Slavic languages and literature. Harvard University. Nine months.

**JAMES A. ROGERS**

*Portland, Ore. Graduate student, Harvard University. History.*

Prince Kropotkin and Russian social thought. Harvard University. One year.

**ALFRED E. SENN**

*Bala-Cynwyd, Pa. Graduate student, Columbia University. History.*

East European history, with emphasis on Lithuanian foreign policy. Libraries in the United States. One year additional to present Fellowship.

**LEON SMOLINSKI**

*Cincinnati, Ohio. Graduate student, Columbia University. Economics.*

The law of value in Soviet economic thought. Columbia University. One year additional to present Fellowship.

**STEPHEN STAMATOPULOS**

*Greenfield, Mass. Graduate student, Harvard University. Government.*

American-Soviet relations. Harvard University. One year additional to present Fellowship.

**PETER F. SUGAR**

*Princeton, N. J. Graduate student, Princeton University. History.*

Internal development of Bosnia-Herzegovina under Austro-Hungarian rule, 1878-1918. Austria, Yugoslavia and Turkey. Fifteen months additional to present Fellowship.

**E. HAROLD SWAYZE**

*San Carlos, Calif. Graduate student, Harvard University. Political science.*

Soviet literature as an instrument of control. Harvard University. One year.

**HOWARD R. SWEARER**

*Wichita, Kan. Graduate student, Harvard University. Political science.*

Soviet-German relations. Harvard University. One year additional to present Fellowship.

**WALTER N. VICKERY**

*Arlington, Mass. Graduate student, Harvard University. Literature.*

Post-war Soviet literary thought. Harvard University. One year additional to present Fellowship.

**ROBERT H. WHITMAN**

*Berkeley, Calif. Graduate student, University of California (Berkeley). Language and literature.*

Russian area studies and Slavic linguistics. United States and France. Eighteen months.

**JAMES J. ZATKO**

*Tarentum, Pa. Graduate student, University of Notre Dame. History.*

Destruction of the Church in Russian territory, 1917-1923. University of Notre Dame and libraries in the United States. Nine months.

# AFRICA

## **WILLIAM J. BARBER**

*Abilene, Kan. Graduate student, Nuffield College, Oxford, England. Economics.*

United States investment in selected African territories, particularly the Central African Federation. Nuffield College, Oxford. Eight months additional to present Fellowship.

## **ALPHONSO A. CASTAGNO**

*New York, N. Y. Instructor, Columbia University. Government.*

Political developments of the Somalilands. London, Rome and the Somalilands. Eighteen months.

## **ROBERT O. COLLINS**

*Waukegan, Ill. Graduate student, Balliol College, Oxford. History.*

Political and administrative history of Equatoria Province of the Sudan. England and the Sudan. One year.

## **JOHN H. DALTON**

*Greenbelt, Md. Assistant Professor, University of Maryland. Economics.*

A study of Tropical African agriculture and soil science. Belgium and the Belgian Congo. One year.

## **PAULA HIRSCH FOSTER**

*Evanston, Ill. Graduate student, Northwestern University. Anthropology.*

The changing roles and status of women in the Acholi District of Uganda. Three months additional to present Fellowship.

## **JAMES LOWELL GIBBS, JR.**

*Ithaca, N. Y. Teaching fellow and resident tutor at Harvard University. Anthropology and law.*

Native law of a tribe in Liberia. U. S. and Liberia. Fifteen months.

## **ESTHER NEWCOMB GOODY**

*Ann Arbor, Mich. Graduate student, University of Cambridge, England. Anthropology.*

Study of a matrilineal people, the

Dumpo, of Southwestern Gonja, the Gold Coast. Gold Coast. One year.

## **RICHARD J. HOUK**

*Logansport, Ind. Associate Professor, De Paul University. Geography.*

Economic and cultural developments of Angola, Portuguese West Africa. Angola and Portugal. One year.

## **C. H. WALTER HOWE**

*Brookline, Mass. Graduate student, Boston University. Political science.*

The growth of African participation in parliamentary institutions in Uganda, 1930-55. Boston University. One year.

## **ALAN H. JACOBS**

*Oak Park, Ill. Graduate student, University of Chicago. Anthropology.*

The age-class system of the Masai tribe of East Africa. Kenya, Uganda and Tanganyika. Eighteen months.

## **DAVID K. MARVIN**

*Evanston, Ill. Graduate student, Northwestern University. Political science.*

Local administration of the Rungwe District in Tanganyika. Tanganyika. One year additional to present Fellowship.

## **WENTWORTH E. MILLER**

*Montclair, N. J. Professor, Cuttington College, Liberia. Political science.*

African studies with emphasis on political science. Boston University. One year.

## **MARVIN P. MIRACLE**

*Palo Alto, Calif. Graduate student, Food and Research Institute, Stanford University.*

The role of maize in tropical African agriculture. United States, Nigeria and the Rhodesias. Two years.

## **NORMAN W. MOSHER**

*Belfast, Me. Research analyst. Economics.*

Methods of public capital formation in the Gold Coast. United States, England and the Gold Coast. One year.

## **GRADY H. NUNN**

*University, Ala. Instructor, University of Alabama. Political science.*

Federalism as a vehicle for evolving self-government in Nigeria. United States, England and Nigeria. Fifteen months.

## **ABRAHAM ROSMAN**

*New Haven, Conn. Graduate student, Yale University. Anthropology.*

Moslem influence on the Kanuri tribe of Northern Nigeria. Nigeria. Fourteen months.

## **BERNICE (MRS. ABRAHAM) ROSMAN**

*New Haven, Conn. Graduate student, Yale University. Psychology.*

Moslem influence on the Kanuri tribe of Northern Nigeria. Nigeria. Fourteen months.

## **JO W. SAXE**

*Philadelphia, Pa. Economics.*

Economic relations between France and the French territories in Africa. France. Four months additional to present Fellowship.

## **EARL W. STEVICK**

*Nashville, Tenn. Associate Professor, Scarritt College for Christian Workers. Linguistics.*

Linguistic studies in Southern Rhodesia, Angola, Mozambique and the Belgian Congo. Two years.

## **IMMANUEL M. WALLERSTEIN**

*New York, N. Y. Graduate student, Oxford University, England. Sociology.*

Voluntary associations in urban centers of the Gold Coast. Gold Coast. Nine months additional to present Fellowship.

## **EDGAR V. WINANS**

*Los Angeles, Calif. Graduate student, U.C.L.A. Anthropology.*

Changes in the subsistence patterns among the Sambaa tribe of East Africa. Tanganyika. One year.

# INTERNATIONAL RELATIONS TRAINING FELLOWSHIPS

*Following are the nine recipients of International Relations Training Fellowships awarded by The Ford Foundation during fiscal 1956. Below the name of each Fellowship recipient are his place of permanent residence, position at the time of application, academic field, subject of study, place of study, and the length of time covered by the award.*

*Financial statements are on page 179.*

## **JOHN L. CHASE**

*Baton Rouge, La. Associate Professor,  
Louisiana State University.  
Political science.*

*Economics and sociology. Princeton  
University. One year.*

## **JOHN A. DeNOVO**

*University Park, Pa. Associate  
Professor, Pennsylvania State  
University. History.*

*Economics, sociology, and Near East-  
ern studies. Harvard University. One  
year.*

## **LEWIS J. EDINGER**

*Montgomery, Ala. Historian and  
Assistant Professor, Research Studies  
Institute, Air University. History.*

*International relations. Stanford Uni-  
versity. One year.*

## **DAVID C. ELLIOT**

*Altadena, Calif. Associate Professor,  
California Institute of Technology.  
History.*

*International law and organization.  
Oxford University, England. One year.*

## **BERNARD C. HENNESSY**

*Tucson, Ariz. Assistant Professor,  
University of Arizona.  
Political science.*

*Studies in social psychology and inter-  
national relations. Massachusetts In-  
stitute of Technology. One year.*

## **ANTHONY Y. KOO**

*East Lansing, Mich. Associate  
Professor, Michigan State University.  
Economics.*

*Sociology, social psychology and inter-  
national relations. Princeton Uni-  
versity. One year.*

## **ALVIN Z. RUBINSTEIN**

*New York, N. Y. Lieutenant,  
U.S. Navy. Political science.*

*Economics, South Asian history, and  
the Russian language. Harvard Uni-  
versity. One year.*

## **FRED A. SONDERMANN**

*Colorado Springs, Colo. Assistant  
Professor, Colorado College.  
Political science.*

*Sociology and anthropology, with em-  
phasis on problems relating to inter-  
national relations. Stanford Uni-  
versity. Nine months.*

## **WALTER F. VELLA**

*San Francisco, Calif. Research  
associate, Cornell University. History.  
International relations. Harvard Uni-  
versity. Fifteen months.*

# BEHAVIORAL SCIENCES GRANTS-IN-AID

# THE TREASURER'S REPORT

Major changes in the financial position of the Foundation during the fiscal year ending September 30, 1956, are reflected in the accompanying financial statements certified by Price Waterhouse & Co., independent public accountants. Further details are presented in the sections which follow.

*Ford Motor Company Investment* The 1955 Annual Report of the Foundation included a comprehensive statement by the trustees on a plan of reclassification of the capital stock of the Ford Motor Company. Under the plan, as approved by Company stockholders in January, 1956, the Foundation exchanged its holdings of 3,089,908 shares of old nonvoting Class A stock for 36,148,620 shares of new nonvoting Class A stock and 10,200,000 shares of new voting common.

On January 26, 1956, the 10,200,000 shares of common stock were sold by the Foundation at \$63 per share, or \$642,600,000, to a group of investment underwriters for public offering. In March, 1956, the Foundation sold 16,381 shares of Class A stock to the Ford Motor Company for its Salaried Employees Savings and Stock Investment Program at \$63 per share, or \$1,032,003. This transaction was made under an arrangement, now terminated, in connection with the earlier public offering.

After allowance for auditing, legal and other expenses incident to the

issuance and sale of Ford Motor Company stock, the Foundation realized net proceeds of \$640,725,445 from the disposition of 10,216,381 shares. These funds were reinvested in other securities, as referred to below. The excess of net proceeds over the book, or carrying, amount of the shares sold was \$548,778,016, which has been credited to the Principal Fund.

The sale of Ford Motor Company stock by the Foundation in 1956, amounting to approximately twenty-two per cent of its holdings, was the first step in a long-range program of diversifying Foundation resources to provide greater financial flexibility and permit the expenditure of principal for grant purposes when considered appropriate by the trustees.

At September 30, 1956, the Foundation held 36,132,239 shares of the nonvoting Class A stock of the Ford Motor Company, carried in the books of account at \$9 per share, or \$325,190,151. Under the Company's Certificate of Incorporation, as amended in January, 1956, the Foundation may convert or exchange its holdings of Class A stock, share for share, into common stock of the Ford Motor Company, but only for specified purposes (including public sale) and subject in certain instances to approval by a majority of the holders of voting common and Class B stock in the Company. The Class A stock, all of which is owned by the Foundation, constituted approximately 66.9 per cent of the total number of outstanding capital shares of the Ford Motor Company at September 30, 1956.

There is no quoted market for the Class A stock. If it were to be assigned the same market price as the common stock, which closed September 28, 1956, at \$59.625 a share on the New York Stock Exchange, the Foundation's holdings of Class A shares would have an assumed market valuation of \$2,154,384,750 as of that date. In the period from January 26, 1956, when public trading in the common stock first began, to September 28, 1956, the quoted price of the common stock has ranged from \$70 to \$51.625 a share in the unlisted and listed markets.

*Income* Investment income of the Foundation in the fiscal year 1956 was \$165,888,263, compared with \$133,576,771 in 1955. Both years included extra dividends received on former holdings of old Class A stock of the Ford Motor Company. Income from investments in the ensuing year is expected to be lower, reflecting the substantial disbursement of funds during fiscal 1956 and 1957 in payment of grants.

*Grants and Appropriations* As noted in The President's Review, new actions amounted to approximately \$602 million in fiscal 1956, including \$489 million in new grants and projects and \$113 million in new appropriations not converted into grants by the end of the year.

Total grants approved in fiscal 1956, including those out of previous years' appropriations, were \$557,778,481, compared with \$64,957,658 in

1955. In addition, the reserve for appropriations for future grants and projects increased by \$41,327,408 during the year. Including unpaid grants and appropriations of \$156,316,559 at the beginning of the year, total financial commitments in fiscal 1956 amounted to \$755,422,448.

Payments on grants in the period were \$292,029,022. The balance of unpaid grants and reserve for appropriations at September 30, 1956, amounted to \$463,393,426, of which approximately \$365,000,000 has been scheduled for payment within the ensuing twelve months. The following shows grant and appropriation actions in summary form:

|   | GRANTS                   | RESERVE FOR<br>APPROPRIATIONS | TOTAL                    |
|---|--------------------------|-------------------------------|--------------------------|
| <i>Balance at September 30, 1955</i>          | \$ 68,908,734            | \$ 87,407,825                 | \$156,316,559            |
| <i>Grants approved in the year</i>            | 557,778,481              |                               | 557,778,481              |
| <i>Increase in reserve for appropriations</i> |                          | <u>41,327,408</u>             | <u>41,327,408</u>        |
|   | \$626,687,215            | \$128,735,233                 | \$755,422,448            |
| <br><i>Grant payments in the year</i>         | <br><u>(292,029,022)</u> |                               | <br><u>(292,029,022)</u> |
| <br><i>Balance at September 30, 1956</i>      | <br><u>\$334,658,193</u> | <br><u>\$128,735,233</u>      | <br><u>\$463,393,426</u> |

*Fund Balances* Grants, projects and expenses exceeded investment income in 1956 by \$397,576,503. Allowing for the Income Fund balance of \$124,148,195 at the beginning of the year, and for expense adjustment of \$924,428, the net excess of grants and expenses over income from the inception of the Foundation through September 30, 1956 has amounted to \$272,503,880.

Based on the carrying value of assets, the balance of the Principal Fund at the year-end was \$935,517,038, after net book credits of \$548,639,481 arising from sales of securities in the year. However, giving effect to the accumulated income deficiency and reserve for appropriations, as shown in the accompanying statement, the combined Fund balances stood at \$534,277,925 on September 30, 1956. The principal worth of the Foundation would, of course, be appraised at a much higher amount if holdings of Class A stock of the Ford Motor Company on that date were taken at an assumed market price equivalent to the common stock into which the Class A stock is convertible or exchangeable under certain conditions.

*Investment Policy* Investments of the Foundation in U. S. Government securities and other bonds and notes at September 30, 1956, are listed in an accompanying schedule which shows the quoted market value of holdings, where available, together with face amounts and book valuations at amortized cost.

As compared with a year earlier, the total of such investments (at

amortized cost) increased by \$526,595,092, reflecting the reinvestment of net proceeds from the sale of Ford Motor Company stock, less the subsequent payment of grants in excess of net income during the period, and other financial transactions.

New investments authorized by the Finance Committee in the year were confined entirely to bonds and similar fixed-income securities. This policy has been given special weight inasmuch as a high proportion of Foundation resources is still held in the form of an equity investment represented by stock of the Ford Motor Company.

In view of large contractual commitments for grants, as well as appropriations for future grant payments, substantial reserves of short-term securities were accumulated, with emphasis on obligations of the U. S. Government and U. S. Government Agencies and commercial paper. The balance of available funds has been invested in bonds of medium to long maturity, including corporate and other issues of sound rating.

Following is a summary of maturities represented by investments in U. S. Government securities and other bonds and notes at September 30, 1956:

| ISSUES MATURING | FACE AMOUNTS                |
|-----------------|-----------------------------|
| 1956-1960       | \$402,269,000               |
| 1961-1965       | 88,560,000                  |
| 1966-1970       | 33,950,000                  |
| 1971 and later  | <u>138,460,000</u>          |
| <b>TOTAL</b>    | <u><u>\$663,239,000</u></u> |

The Finance Committee has stressed a policy of investing primarily in securities with ready markets, thus restricting bond investments of limited marketability to a small percentage of the total portfolio.

As shown in the financial statement, the Foundation also holds miscellaneous investment assets consisting of real estate and other securities originally acquired by donation. No material changes were made in these holdings during the year.

November 15, 1956

To the Board of Trustees of  
The Ford Foundation

In our opinion, the accompanying statements present fairly the assets, liabilities and fund balances of The Ford Foundation as at September 30, 1956 and its income, grants and expenses for the year then ended. Our examination of such statements and the underlying records was made in accordance with generally accepted auditing standards.

detailed list of

# PRIVATELY SUPPORTED COLLEGES

receiving payments against endowment grants during the year ended September 30, 1956

These payments represent approximately one half of a \$210 million grant.  
 Payments of the second half are scheduled to be made before June 30, 1957.  
 They will go to the same colleges, but the amount  
 for any given college, as a result of final computations and audits,  
 may be somewhat larger or smaller than the first payment shown in this list.

## ALABAMA

|  |          |

---

\$105,628,000

*detailed list of*

**PRIVATELY SUPPORTED COLLEGES**

*receiving payments against accomplishment grants during the year ended September 30, 1956*

*These payments represent approximately one half of a \$50 million grant.*

*Payments of the second half are scheduled to be made before June 30, 1957.*

*They will go to the same colleges, but the amount for any given college, as a result of final computations and audits may be somewhat larger or smaller than the first payment shown in this list.*
