PUBLIC INTEREST TECHNOLOGY

Are these 5 tools in your organization’s digital security tool box? #PublicInterestTech

Etienne Maynier, security engineer and digital researcher, talks about the prevalence of digital surveillance.

Technology is transforming every area of our lives. But as it opens new avenues and shows us fresh possibilities, tech can also deepen existing inequalities. We believe in harnessing technology to serve justice and the public interest—and we see a wealth of opportunities to do so. That’s why the Ford Foundation is working with a community of partners to develop a path for people to use their technology skills to change the world for the better: the professional field of public interest technology.

Transcript begins.

Etienne Maynier: When you learn to cook you learn that you should not put water into boiling oil. When you go online you should know the same thing, how to protect yourself, and protect your private information.

[Etienne Maynier, Ford-Mozilla Open Web Fellow, Citizen Lab. A white man with half-long hair and glasses wearing a purple shirt and gray jeans.]

I’m Etienne, I’m a digital researcher, and I fight off digital threats on activists. What is the most pressing digital threat today? Digital surveillance. The global surveillance industry now is estimated at $5 billion. The terrorist attacks have now allowed the government to move, to pass some very strong surveillance bills, and have very invasive surveillance practices. Everything we do is recorded by someone, somewhere, and we need to stop surveillance before it’s used against us.

Here are five things every organization should know to protect their security. One, know and understand your threats. Two, use two-factor authentication. Three, use a password manager. Four, use Signal to chat with your friends. And five, update your software. Because there is surveillance everywhere, because there is exclusion of a lot of people, because there is a strong inequality to how we access and understand technology, we have to consider that we need to fight for a society that’s more equal. Technology won’t improve our society if we don’t fight for a better society with technology.
